

TENTATIVE

TOSHIBA CMOS DIGITAL INTEGRATED CIRCUIT SILICON MONOLITHIC

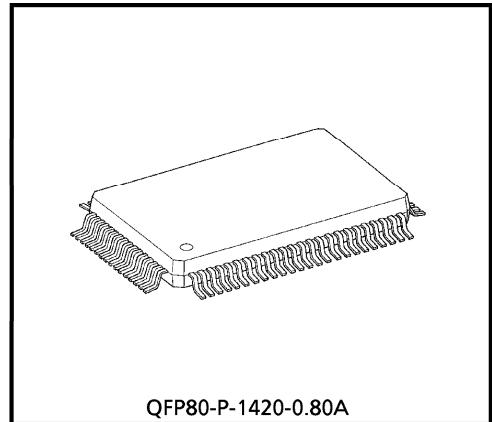

TC9284BF

CD SINGLE CHIP PROCESSOR WITH BUILT-IN 1BIT DA CONVERTER

The TC9284BF is a single chip processor for sync separation protection / synchronization, EFM demodulation, error correction / interpolation, microcomputer interface, CLV servo a focus tracking servo in CD player system. And, built-in 1bit DA converter. In combination with the TA8190F/TA8191F/TA2031F/TA2035F/TA2065F/TA2077F, which are focus tracking servo LSI, a CD player system can be composed very simply.

FEATURES

- Positive sync pattern detection, sync signal protection and synchronization.
- Built-in EFM demodulation and subcode demodulation circuit.
- Has the correction capacity of single and double corrections for C1 and C2 correcting units, respectively, using CIRC correction theoretical format.
- Jitter absorbing capacity of ± 5 frames.
- Built-in 16K RAM.
- Built-in digital out circuit.
- Smooth muting through zero cross detection.
- Read timing free subcode Q data.
- Built-in data slicer and analog PLL (free-adjustment VCO adopted) circuit.
- Focus/tracking loop gain auto adjusting function incorporated.
- Built-in AFC and APC circuits for disc motor CLV servo.
- Built-in focus tracking servo control circuit.
- Tracking search control capable of coping with all modes.
- Built-in 1bit DA converter.
Function of DA converter.
 - (1) Built-in 8-time oversampling digital filter.
 - (2) Built-in soft mute function.
- Built-in microcomputer interface circuit.
- Double speed play is possible.
- In CMOS structure, high speed and low power dissipation.
- 80 pin flat package.

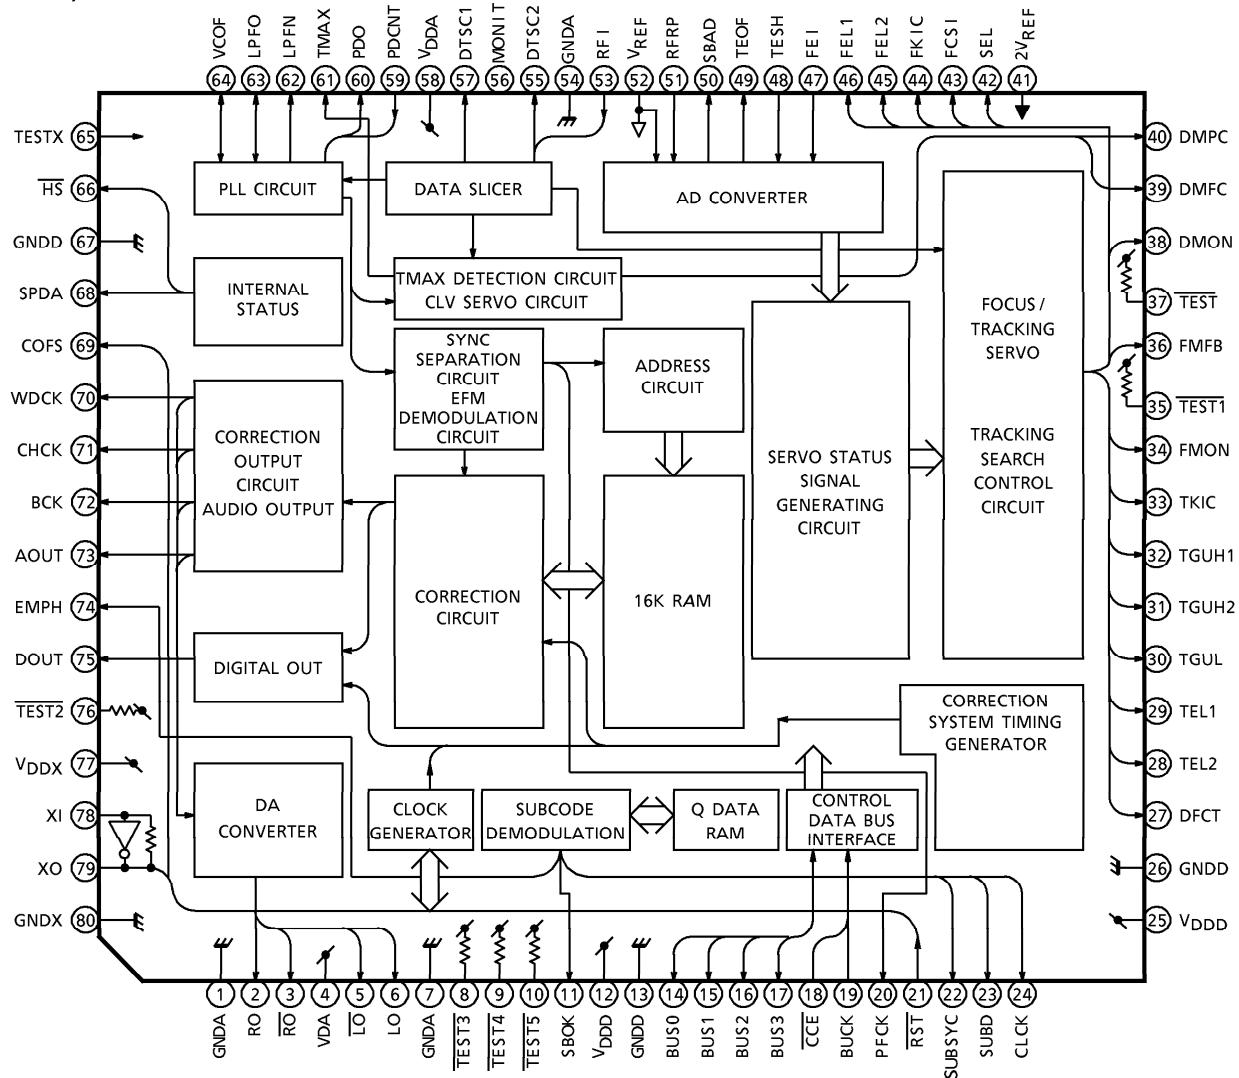

QFP80-P-1420-0.80A

Weight : 1.57g (Typ.)

PIN FUNCTION

PIN No.	SYMBOL	I/O	FUNCTIONAL DESCRIPTION	REMARKS
1	GNDA	—	Analog ground terminal for DA converter (R channel)	—
2	RO	O	R channel data forward output terminal.	—
3	\overline{RO}	O	R channel data reverse output terminal.	—
4	V _{DA}	—	Analog power supply terminal for DA converter.	—
5	LO	O	L channel data reverse output terminal.	—
6	LO	O	L channel data forward output terminal.	—
7	GNDA	—	Analog ground terminal for DA converter (L channel)	—
8	TEST3	I	Test terminal. Normally, keep at "H" level or open.	With pull-up resistor
9	TEST4	I	Test terminal. Normally, keep at "H" level or open.	
10	TEST5	I	Test terminal. Normally, keep at "H" level or open.	
11	SBOK	O	Subcode Q data CRC check adjusting result output terminal. The adjusting result is OK at "H" level.	—
12	V _{DDD}	—	Digital supply voltage terminal. (+5V)	—
13	GNDD	—	Digital ground terminal.	—
14 15 17	BUS0 BUS1 BUS3	I/O	Command and data sending / receiving input/output terminals.	Schmitt input Open drain output With pull-up resistor
18	CCE	I	Command and data sending / receiving chip enable signal input terminal. The bus line becomes active at "L" level.	Schmitt input
19	BUCK	I	Command and data sending / receiving clock input terminal.	
20	PFCK	O	Regeneration system frame periodic signal output terminal. 7.35kHz	—
21	\overline{RST}	I	Reset input terminal. The internal system is reset at "L" level.	With pull-up resistor
22	SUBSYC	O	Subcode sync signal output terminal.	—
23	SUBD	O	Subcode P~W output terminals.	—
24	CLCK	I	Subcode P~W data readout clock input terminal.	—
25	V _{DDD}	—	Digital supply voltage terminal.	—
26	GNDD	—	Digital ground terminal.	—
27	DFCT	O	Defect detection signal output terminal. V _{REF} when defect is detected. Normally, HiZ.	—
28 29	TEL2 TEL1	O	Tracking gain adjusting analog switch output terminals V _{REF} or HiZ.	—
30	TGUL	O	Tracking servo loop low frequency phase compensator change-over analog switch output terminal. HiZ (gain up) when detecting shock. Normally, V _{REF} .	—

PIN FUNCTION

PIN No.	SYMBOL	I/O	FUNCTIONAL DESCRIPTION	REMARKS																
31	TGUH2	O	Tracking servo loop middle / high frequency phase compensator change-over analog switch output terminals. HiZ (gain up) when detecting shock. Normally, V _{REF} . TGUH1 is used at normal regeneration and TGUH2 is used at double speed regeneration.	—																
32	TGUH1	O	Tracking actuator kick signal output terminal. Kicks in the outer circumferential direction at "H" level and in the inner circumferential direction at "L" level.	3-state output																
34	FMON	O	Feed servo ON/OFF analog switch output terminals. Servo on at "HiZ". Servo off at "V _{REF} ".	—																
35	TEST1	I	Test terminal. Normally, keep at "H" level or open.	With pull-up resistor																
36	FMFB	O	Feed motor FWD/BWD feeding control signal output terminal. Feed in the outer circumferential direction at "H" level and in the inner circumferential direction at "L" level.	3-state output																
37	TEST	I	Test terminal. Normally, keep at "H" level or open.	With pull-up resistor

APPLICATION CIRCUIT EXAMPLE-1 (+5V single power supply used)

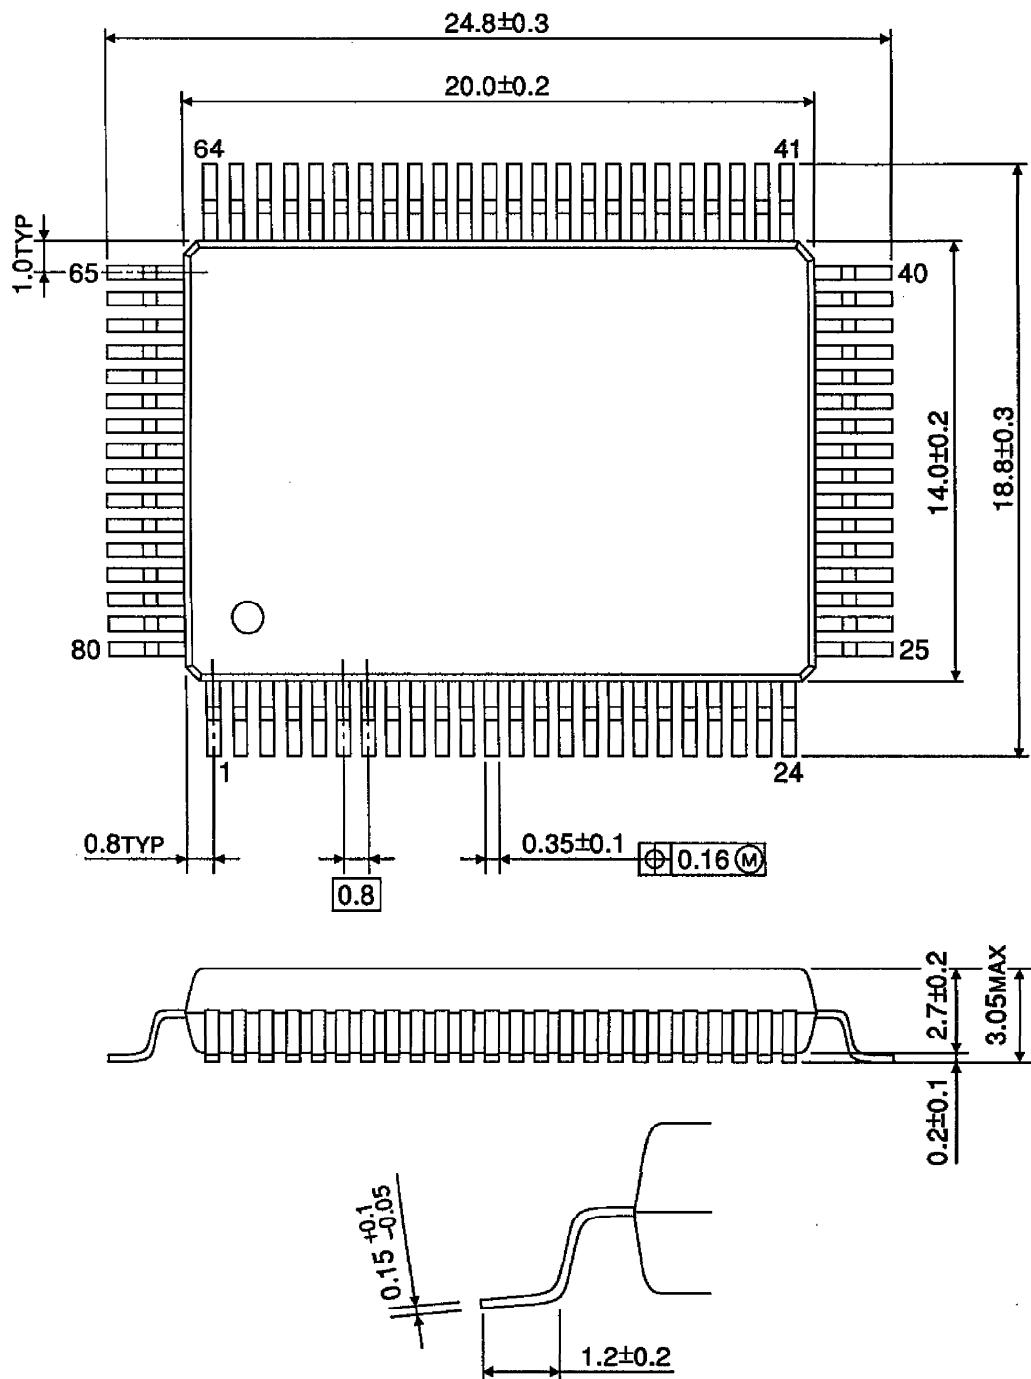

APPLICATION CIRCUIT EXAMPLE-2 ($\pm 5V$ two power supply used)

(Cautions)

- Quality of crystal oscillation wave form largely affect S/N ratio and noise distortion. Further, this is also true when system clock is input externally through the XI terminal.
- The wiring between the TC9284BF output and the TA2009F input must be made the shortest.
- The condenser between VDD and GND shall be connected as close to the pin as possible.

RESTRICTIONS ON PRODUCT USE

000707EBA

- TOSHIBA is continually working to improve the quality and reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to comply with the standards of safety in making a safe design for the entire system, and to avoid situations in which a malfunction or failure of such TOSHIBA products could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent TOSHIBA products specifications. Also, please keep in mind the precautions and conditions set forth in the "Handling Guide for Semiconductor Devices," or "TOSHIBA Semiconductor Reliability Handbook" etc..
- The TOSHIBA products listed in this document are intended for usage in general electronics applications (computer, personal equipment, office equipment, measuring equipment, industrial robotics, domestic appliances, etc.). These TOSHIBA products are neither intended nor warranted for usage in equipment that requires extraordinarily high quality and/or reliability or a malfunction or failure of which may cause loss of human life or bodily injury ("Unintended Usage"). Unintended Usage include atomic energy control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, combustion control instruments, medical instruments, all types of safety devices, etc.. Unintended Usage of TOSHIBA products listed in this document shall be made at the customer's own risk.
- The products described in this document are subject to the foreign exchange and foreign trade laws.
- The information contained herein is presented only as a guide for the applications of our products. No responsibility is assumed by TOSHIBA CORPORATION for any infringements of intellectual property or other rights of the third parties which may result from its use. No license is granted by implication or otherwise under any intellectual property or other rights of TOSHIBA CORPORATION or others.
- The information contained herein is subject to change without notice.
