Passive Matrix TruSurround[™] 3D Audio Processor

■GENERAL DESCRIPTION

The **NJM2188** is a Passive Matrix TruSurround[™] 3D audio processor. It regenerates the full surround sound field directly from any kinds of surround encoded stereo input(Lt/Rt) signals.

After the internal passive matrix circuit decodes Lt/Rt signal into 4 channel signals, the TruSurround virtualizer encodes them into 2 channel surround signals again.

Accordingly any pre-processors decoding into 4 channel signals are not required.

The **NJM2188** also includes the SRS 3D-STEREO, and regenerates a 3D sound field from normal L/R input.

The **NJM2188** is suitable for TV, mini component, CD radio cassette, multimedia speaker system ,and others.
