

NAIS**SMD RELAYS
WITH 8GHz CAPABILITIES****RJ-RELAYS****FEATURES**

- **Excellent high frequency characteristics (50Ω, at 5GHz)**

V.S.W.R.: Max. 1.25

Insertion loss: Max. 0.5dB

Isolation: Min. 35dB

(Between open contacts)

Min. 30dB

(Between contact sets)

- **Surface mount terminal**

Surface mount terminals are now standard so there is much less work in designing PC boards.

- **Small size**

Size: 14.00 (L)×9.00 (W)×8.20 (H) mm

.551 (L)×.354 (W)×.323 (H) inch

**TYPICAL
APPLICATIONS****Measurement equipment market**

Attenuator circuits, spectrum analyzer, oscilloscope, mobile equipment, tester

Mobile telecommunication market

IMT2000, microwave communication

Medical instruments market**SPECIFICATIONS****Contact**

Characteristics

Initial insulation resistance*1	Min. 500 MΩ (at 500 V DC)	
Initial breakdown voltage*2	Between open contacts	500 Vrms
	Between contact sets	500 Vrms
	Between contact and coil	500 Vrms
Operate time [Set time]*3 (at 20°C)	Max. 5ms	
Release time (without diode)[Reset time]*3 (at 20°C)	Max. 5ms	
Temperature rise (at 20°C)*4	Max. 50°C	
Shock resistance	Functional*5	Min. 500 m/s ²
	Destructive*6	Min. 1,000 m/s ²
Vibration resistance	Functional*7	10 to 55 Hz at double amplitude of 3 mm
	Destructive	10 to 55 Hz at double amplitude of 5 mm
Conditions for operation, transport and storage*8 (Not freezing and condensing at low temperature)	Ambient temp.	-30°C to 70°C -22°F to 158°F
	Humidity	5 to 85% R.H.
Unit weight	Approx. 3 g .11 oz	

Remarks

* Specifications will vary with foreign standards certification ratings.

*1 Measurement at same location as "Initial breakdown voltage" section.

*2 Detection current: 10mA

*3 Nominal operating voltage applied to the coil, excluding contact bounce time.

*4 By resistive method, nominal voltage applied to the coil, 5GHz, V.S.W.R. ≤ 1.25

*5 Half-wave pulse of sine wave: 6ms, detection time: 10μs.

*6 Pulse of sine wave: 11ms.

*7 Detection time: 10μs

*8 Refer to 6. Conditions for operation, transport and storage mentioned in NOTES

NOTES

1. Coil operating power

Pure DC current should be applied to the coil. The wave form should be rectangular. If it includes ripple, the ripple factor should be less than 5%.

However, check it with the actual circuit since the characteristics may be slightly different. The nominal operating voltage should be applied to the coil for more than 20 ms to set/reset the latching type relay.

2. Coil connection

When connecting coils, refer to the wiring diagram to prevent mis-operation or malfunction.

3. External magnetic field

Since RJ relays are highly sensitive polarized relays, their characteristics will be affected by a strong external magnetic field. Avoid using the relay under that condition.

4. Cleaning

For automatic cleaning, the boiling method is recommended. Avoid ultrasonic cleaning which subjects the relays to high frequency vibrations, which may cause the contacts to stick.

It is recommended that alcoholic solvents be used.

5. Tape and reel packing

1) Tape dimensions

2) Dimensions of plastic reel

6. Conditions for operation, transport and storage conditions

(1) Ambient temperature, humidity, and atmospheric pressure during usage, transport, and storage of the relay:

(1) Temperature:

−30 to +70°C −22 to +158°F

(However, tolerance range is −30 to

+60°C −22 to +140°F if package is carried as is.)

(2) Humidity: 5 to 85% RH

(Avoid freezing and condensation.)

The humidity range varies with the temperature. Use within the range indicated in the graph below.

(3) Atmospheric pressure: 86 to 106 kPa
Temperature and humidity range for usage, transport, and storage:

2) Condensation

Condensation forms when there is a sudden change in temperature under high temperature and high humidity conditions. Condensation will cause deterioration of the relay insulation.

3) Freezing

Condensation or other moisture may freeze on the relay when the temperature is lower than 0°C 32°F. This causes problems such as sticking of movable parts or operational time lags.

4) Low temperature, low humidity environments

The plastic becomes brittle if the relay is exposed to a low temperature, low humidity environment for long periods of time.

5) Storage procedures for surface-mount terminal types

Since the relay is very sensitive to humidity, it is packed in humidity-free, hermetically sealed packaging. When storing the relay, be careful of the following points:

(1) Be sure to use the relay immediately after removing it from its sealed package.
(2) When storing the relay for long periods of time after removing it from its sealed package, we recommend using a humidity-free bag with silica gel to prevent subjecting the relay to humidity.

Furthermore, if the relay is solder mounted when it has been subjected to excessive humidity, cracks and leaks can occur. Be sure to mount the relay under the required mounting conditions.

7. Soldering

1) Surface-mount terminal

In case of automatic soldering, the following conditions should be observed

(1) Position of measuring temperature

A: Surface of PC board where relay is mounted.
B: Above the PC board surface.

(2) IR (infrared reflow) soldering method

Temperature rise of relay itself may vary according to the mounting level or the heating method of reflow equipment.

Therefore, please set the temperature of soldering portion of relay terminal and the top surface of the relay case not to exceed the above mentioned soldering condition. It is recommended to check the temperature rise of each portion under actual mounting condition before use.

2) Standard PC board terminal

Please meet the following conditions if this relay is to be automatically soldered.

(1) Preheating: Max. 100°C 212°F (terminal solder surface) for max. 60 seconds
(2) Soldering: Max. 250°C 482°F for max. 5 seconds

The effect on the relay depends on the actual substrate used. Please verify the substrate to be used.

3) Hand soldering

Please meet the following conditions if this relay is to be soldered by hand.

(1) Wattage: 30 to 60 W
(2) Tip temperature/time: 280 to 300°C 536 to 572°F for max. 5 seconds

The effect on the relay depends on the actual substrate used. Please verify the substrate to be used.

(4) Avoid high frequency cleaning since this may adversely affect relay characteristics. Use alcohol-based cleaning solutions when cleaning relays.
