

Sound processor for CD radio cassette player BD3871FS

● Description

BD3871FS is a sound processor for CD/MD radio cassette player. This IC provides all functions, such as input selector (3 input sources), an input gain amplifier (25dB, 27dB, 29dB), and a surround, tone (bass, treble). This IC can be controlled by a 2-wire serial data interface.

● Dimension (Units : mm)

SSOP-A24

● Features

- 1) Can select center frequency and Q value of Bass characteristics by external components.
- 2) Mute switch at the input terminal can reduce cross talk.
- 3) Surround function is composed without external components.
- 4) Ideal for energy-saving designs with low current consumption due to the adoption of the BiCMOS process, allowing easy-design of the regulator blocks in the set.

● Applications

CD radio cassette player, MD radio cassette player, Micro component stereo
