Low power dual operational amplifiers

NE/SA/SE532/
LM258/358/A/2904

DESCRIPTION

The 532/358/LM2904 consists of two independent, high gain, internally frequency-compensated operational amplifiers internally frequency-compensated operational amplifiers designed specifically to operate from a single power supply over a wide range of voltages. Operation from dual power supplies is also possible, and the low power supply current drain is independent of the magnitude of the power supply voltage.

UNIQUE FEATURES

In the linear mode the input common-mode voltage range includes ground and the output voltage can also swing to includes ground and the output voltage can also swing to ground, even though operated from only a single power supply voltage. The unity gain cross frequency is temperature-compensated. The input bias current is also temperature-compensated.

FEATURES

- Internally frequency-compensated for unity gain
- Large DC voltage gain: 100 dB
- Wide bandwidth (unity gain): 1 MHz (temperature-compensated)
- Wide power supply range single supply: $3 V_{DC}$ to $30 V_{DC}$, or dual supplies: $\pm 1.5 V_{DC}$ to $\pm 15 V_{DC}$
- Very low supply current drain ($400 \mu A$)—essentially independent of supply voltage (1 mW/op amp at $+5 V_{DC}$)
- Low input biasing current: $45 nA_{DC}$ temperature-compensated
- Low input offset voltage: $2 mV_{DC}$, and offset current: $5 nA_{DC}$
- Differential input voltage range equal to the power supply voltage
- Large output voltage: $0 V_{DC}$ to $V+ 1.5 V_{DC}$ swing

ORDERING INFORMATION

DESCRIPTION	TEMPERATURE RANGE	ORDER CODE	DWG #
8-Pin Plastic Small Outline (SO) Package	0 °C to +70 °C	NE532D	SOT96-1
8-Pin Plastic Dual In-Line Package (DIP)	0 °C to +70 °C	NE532N	SOT97-1
8-Pin Plastic Small Outline (SO) Package	−40 °C to +85 °C	SA532D	SOT96-1
8-Pin Plastic Small Outline (SO) Package	−40 °C to +125 °C	LM2904D	SOT96-1
8-Pin Plastic Thin Shrink Small Outline Package (TSSOP)	−40 °C to +125 °C	LM2904DP	SOT505-1
8-Pin Plastic Dual In-Line Package (DIP)	−40 °C to +125 °C	LM2904N	SOT97-1
8-Pin Plastic Small Outline (SO) Package	−25 °C to +125 °C	LM258D	SOT96-1
8-Pin Plastic Dual In-Line Package (DIP)	−25 °C to +125 °C	LM258N	SOT97-1
8-Pin Plastic Small Outline (SO) Package	0 °C to +70 °C	LM358D	SOT96-1
8-Pin Plastic Thin Shrink Small Outline Package (TSSOP)	0 °C to +70 °C	LM358DP	SOT505-1
8-Pin Plastic Dual In-Line Package (DIP)	0 °C to +70 °C	LM358N	SOT97-1
8-Pin Plastic Small Outline (SO) Package	0 °C to +70 °C	LM358AD	SOT96-1
8-Pin Plastic Dual In-Line Package (DIP)	0 °C to +70 °C	LM358AN	SOT97-1
8-Pin Plastic Dual In-Line Package (DIP)	−55 °C to +125 °C	SE532N	SOT97-1

ABSOLUTE MAXIMUM RATINGS

SYMBOL	PARAMETER	RATING	UNIT
V_S	Supply voltage, V+	32 or ± 16	V_{DC}
	Differential input voltage	32	V_{DC}
V_{IN}	Input voltage	−0.3 to +32	V_{DC}
P_D	Maximum power dissipation $T_{amb} = 25\text{ °C}$ (Still air) ¹ N package D package DP package	1160 780 714	mW mW mW
	Output short-circuit to GND ² $V_+ < 15\text{ V}_{DC}$ and $T_{amb} = 25\text{ °C}$	Continuous	
T_{amb}	Operating ambient temperature range NE532/LM358/LM358A LM258 LM2904 SA532 SE532	0 to +70 −25 to +85 −40 to +125 −40 to +85 −55 to +125	°C °C °C °C °C
T_{stg}	Storage temperature range	−65 to +150	°C
T_{sld}	Lead soldering temperature (10 sec max)	230	°C

NOTE:

- Derate above 25 °C, at the following rates:
N package at 9.3 mW/°C
D package at 6.2 mW/°C
DP package at 5.72 mW/°C
- Short-circuits from the output to V+ can cause excessive heating and eventual destruction. The maximum output current is approximately 40 mA independent of the magnitude of V+. At values of supply voltage in excess of +15 V_{DC} , continuous short-circuits can exceed the power dissipation ratings and cause eventual destruction.

NOTES:

- $V_O \approx 1.4\text{ V}$, $R_S = 0\text{ }\Omega$ with V_+ from 5 V to 30 V ; and over the full input common-mode range (0 V to $V_+ - 1.5\text{ V}$).
- The direction of the input current is out of the IC due to the PNP input stage. This current is essentially constant, independent of the state of the output so no loading change exists on the input lines.
- The input common-mode voltage or either input signal voltage should not be allowed to go negative by more than 0.3 V . The upper end of the common-mode voltage range is $V_+ - 1.5\text{ V}$, but either or both inputs can go to $+32\text{ V}$ without damage.
- Due to proximity of external components, insure that coupling is not originating via stray capacitance between these external parts. This typically can be detected as this type of capacitance coupling increases at higher frequencies.
- Short-circuits from the output to V_+ can cause excessive heating and eventual destruction. The maximum output current is approximately 40 mA independent of the magnitude of V_+ . At values of supply voltage in excess of $+15\text{ V}_{DC}$, continuous short-circuits can exceed the power dissipation ratings and cause eventual destruction.
- The input common-mode voltage or either input signal voltage should not be allowed to go negative by more than 0.3 V . The upper end of the common-mode voltage range is $V_+ - 1.5\text{ V}$, but either or both inputs can go to $+32\text{ V}_{DC}$ without damage.
