Audio ICs

1.5V dual auto-reverse preamplifier BA3413FS

The BA3413FS is a 1.5V dual auto-reverse preamplifier designed for playback operation only. It includes built-in circuits for metal tape and auto-reverse applications, and its significantly streamlined component side offers a minimal requirement for external components.

Applications1.5V headphone stereos

Features

- 1) Low noise.
- 2) Can be directly coupled to the tape head.
- 3) Supports auto-reverse.

- 4) Supports metal tape.
- 5) Good reduced voltage characteristics (0.9V Typ.).

Block diagram

•Absolute maximum ratings (Ta = 25° C)

Parameter	Symbol	Limits	Unit
Power supply voltage	Vcc	2.2	V
Power dissipation	Pd	650*	mW
Operating temperature	Topr	-25~+75	Ĉ
Storage temperature	Tstg	-55~+125	Ĉ

★ When mounted on a 90mm × 50mm × 1.6mm glass epoxy board. Reduced by 6.5mW for each increase in Ta of 1°C over 25°C.

• Recommended operating conditions (Ta = 25° C)

Parameter	Symbol	Min.	Тур.	Max.	Unit
Power supply voltage	Vcc	0.9	1.25	2.0	V

●Electrical characteristics (unless otherwise noted, Ta = 25°C, Vcc = 1.25V, and f = 1kHz)

Parameter	Symbol	Min.	Тур.	Max.	Unit	Conditions
Quiescent current	la	0.3	0.9	1.6	mA	VIN=0Vrms
Open loop voltage gain	Gvo	50	65	_	dB	Vo=-20dBV
Input conversion noise voltage	VNIN	-	1.2	2.0	μ Vrms	Rg=2.2kΩ, VIN=0Vrms
Maximum output voltage	Vом	200	350	_	mVrms	THD=1%
Channel separation	CS	50	60	_	dB	$R_g=2.2k\Omega$, $V_0=0.2V_{rms}$
A / B crosstalk	СТа-в	50	65	_	dB	$R_g=2.2k\Omega$, $V_O=0.2V_{rms}$
Total harmonic distortion	THD	_	0.05	0.2	%	Vo=0.2Vrms
Input bias current	Ів	_	125	500	nA	VIN=0Vms
Metal mute level	MUTE	3.0	4.5	7.0	dB	Vo=-20dBV, f=10kHz

Circuit operation

(1) Input stage

At the input stage the pin 4 bias is the input and the negative feedback virtual earth, and the bias for the input stage transistor is taken from pin 4. This allows direct head coupling. Connect a 1000pF capacitor in parallel with the tape head to prevent high-frequency interference.

(2) Input switching

The auto-reverse switching circuit switches the constant current supply for the first-stage transistor, and responds depending on whether pin 9 is open circuit or connected to GND. The reverse timing can be adjusted by changing the value of the capacitor connected to pin 8 (see Fig. 3). (3) Equalizer

The equalizer is based on a NAB120 μ S NF-type equalizer, and has 70 μ S muting added for metal tape applications. The equalizer constants can be changed by switching pin 13 between open circuit and V_{cc} (see Fig. 4).
