

### Features

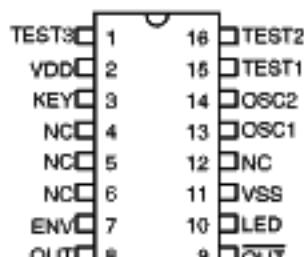

- Single power supply 2.4~3.3V
- Low standby current: 1 $\mu$ A (Typ.) at VDD=3
- Speaker or direct buzzer application
- Built-in envelope control circuit
- 1Hz~8Hz programmable LED flash output
- 32 times of sound cycles maximum
- Minimum external components

### General Description

The HT2813 is a CMOS LSI chip designed for use in sound effects products. It is equipped with tone circuit and other control logic to generate different sounds including bird sound, ghost sound, alarm sound, and so forth. The

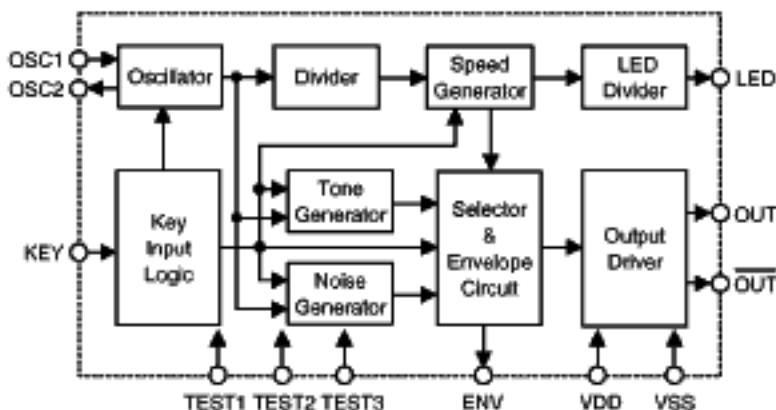

customer's audio tape can be analyzed and programmed into an internal ROM by changing a mask layer during device fabrication. The HT2813 is suitable for various toy application.

### Absolute Maximum Ratings\*

Supply Voltage .....	-0.3V to 5V	Storage Temperature.....	-50°C to 125°C
Input Voltage.....	VSS-0.3 to VDD+0.3V	Operating Temperature.....	0°C to 70°C

\*Note: Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only. Functional operation of this device at these or any other conditions above those indicated in the operational sections of this specification is not implied and exposure to absolute maximum rating conditions for extended periods may affect device reliability.
