

# Compact high speed thick film thermal printhead (8dots / mm)

## KF2004-GF41A

Using its expertise in LSI technology, ROHM has developed new high density driver chips for use in the KF2004-GF41A. Capable of being employed for both thermal and thermal transfer printing, with a print speed of 200mm/s, the resulting printheads are the fastest in their class. The high-speed and high-density printing answers the needs of ATM, kiosk and ticket printing devices, which are increasingly being called upon to produce graphical output.

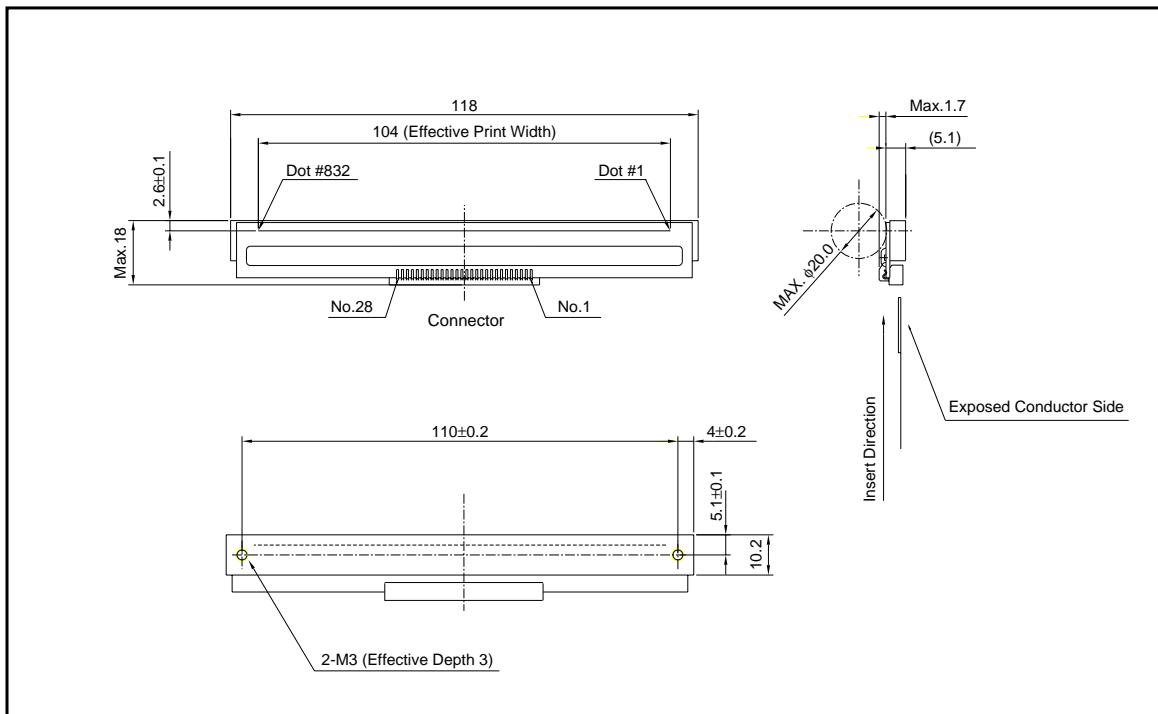

### ● Applications

Label printers  
Ticket printers  
POS printers  
ATM printers  
KIOSK printers  
Terminal printers

### ● Features

- 1) The use of a special partial glaze and the latest heating element structure, along with new high-density driver chips that can accept big current, has allowed ROHM to achieve print speeds of 200mm/s, the fastest in its class.
- 2) One rank resistance value of  $650\Omega \pm 3\%$  eliminates the inconvenience of rank selection.
- 3) 2-inch, 3-inch and 4-inch series are available.
