- Designed to Meet Eurocom D1-IA8
- Meets Stanag 4209 and Stanag 4380
- Military Communications
- Delta MUX, Switch and Phone Applications
- Single Chip Full Duplex Codec
- On-Chip Input and Output Filters
- Programmable Sampling Clocks
- 3 or 4-bit Compand Algorithm
- Forced Idle Facility
- Powersave Facility
- Single 5V CMOS Process
- Full Duplex CVSD\* Codec

# FX619

### Brief Description

The FX619 is an LSI circuit designed as a \*Continuously Variable Slope Delta Codec and is intended for use in military communications systems.

Designed to meet Eurocom D1-IA8 with external components, the device is suitable for applications in military Delta Multiplexers, switches and phones.

Encoder input and decoder output filters are incorporated on-chip. Sampling clock rates can be programmed to 16, 32 or 64 k bits/second from an internal clock generator or may be externally applied in the range 8 to 64 k bits/second. Sampling clock frequencies are output for the synchronization of external circuits.

The encoder has an enable function for use in multiplexer applications. Encoder and Decoder forced idle facilities are provided forcing a 10101010..... pattern in encode and a  $V_{DD}/2$  bias in decode. The companding circuits may be operated with a 3 or 4-bit algorithm which is externally selected. The device may be put in the standby mode by selection of the powersave facility. A reference 1.024MHz oscillator uses an external clock or Xtal. The FX619 is a low-power, 5 volt CMOS device and is available in 22-pin cerdip DIL, 24-lead/pin plastic and 28-lead ceramic leadless SMT packages.

## Pin Number      Function

FX619 J	FX619 L1/L2	FX619 M1													
1	1	1	<b>Xtal/Clock</b> : Input to the clock oscillator inverter. A 1.024MHz Xtal input or externally derived clock is injected here. See Clock Mode pins and Figure 3.												
	2	2	No connection												
2	3	3	<b>Xtal</b> : Output of clock oscillator inverter. Xtal circuitry shown is in accordance with CML application note D/XT/1 April 1986.												
3	4	4	No connection												
4	5	5	<b>Encoder Data Clock</b> : A logic I/O port. External encode clock input or internal data clock output. Clock frequency is dependant upon clock mode 1, 2 inputs and Xtal frequency (see Clock Mode pins).												
5	6	6	<p><b>Encoder Output</b> : The encoder digital output, this is a three state output whose condition is set by Data Enable and Powersave inputs as shown :</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th>Data Enable</th> <th>Powersave</th> <th>Encoder Output</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>1</td> <td>Enabled</td> </tr> <tr> <td>0</td> <td>1</td> <td>High Z (o/c)</td> </tr> <tr> <td>1</td> <td>0</td> <td>Vss</td> </tr> </tbody> </table>	Data Enable	Powersave	Encoder Output	1	1	Enabled	0	1	High Z (o/c)	1	0	Vss
Data Enable	Powersave	Encoder Output													
1	1	Enabled													
0	1	High Z (o/c)													
1	0	Vss													
		7, 8	No connection												
6	7	9	<b>Encoder Force Idle</b> : When this pin is a logical '0' the encoder is forced to an idle state and the encoder digital output is 0101..., a perfect idle pattern. When this pin is a logical '1' the encoder encodes as normal. Internal 1MΩ Pullup.												
7	8	10	<b>Data Enable</b> : Data is made available at the encoder output pin by control of this input. See Encoder Output pin. Internal 1MΩ Pullup.												
8	9	11	No connection												
9	10	12	<b>Bias</b> : Normally at $V_{DD}/2$ bias, this pin requires to be externally decoupled by a capacitor, $C_4$ . Internally pulled to $V_{SS}$ when "Powersave" is a logical '0'.												
10	11	13	<b>Encoder Input</b> : The analogue signal input. Internally biased at $V_{DD}/2$ , external components are required on this input. The source impedance should be less than 100Ω, output idle channel noise levels will improve with an even lower source impedance. See Fig. 3.												
11	12	14	$V_{SS}$ : Negative Supply.

12	13	15,16	No connection															
13	14	17	<b>Decoder Output</b> : The recovered analogue signal is output at this pin, it is the buffered output of a bandpass filter and requires external components. During "Powersave" this output is o/c.															
14	15	18,19	No connection															
15	16	20	<b>Powersave</b> : A logical '0' at this pin puts most parts of the codec into a quiescent non-operational state. When at a logical '1' the codec operates normally. Internal 1MΩ Pullup.															
	17	21	No connection															
16	18	22	<b>Decoder Force Idle</b> : A logical '0' at this pin gates a 0101...pattern internally to the decoder so that the decoder output goes to $V_{DD}/2$ . When this pin is at a logical '1' the decoder operates as normal. Internal 1MΩ Pullup.															
17	19	23	<b>Decoder Input</b> : The received digital signal input. Internal 1MΩ Pullup.

## Process Information

The following Table gives details of the process and test controls employed in the manufacture of the FX619 Eurocom Delta Codec in J and M1 packages only. L1 and L2 products are supplied without the process and test controls detailed below.

Function	Reference	Remarks
Hermeticity		
Fine Leak Test –	Mil Std 883C	using Method 1014 – test condition A1.
Coarse Leak Test –	Mil Std 883C	using Method 1014 – test condition C.
Burnin	Mil Std 883C	using Method 1015 – test condition E. 168 Hours @ 85°C with 5v power, and clocks applied.
Temperature Cycling	Mil Std 883C	using Method 1010 – test condition B. 10 cycles -55°C to +125°C.

The following mechanical assembly tests are Qualified to BS9450

Vibration	BS9450	Section 1.2.6.8.1 55Hz to 500Hz at 98 m/sec acceleration.
Shock	BS9450	Section 1.2.6.6 981 m/sec for 6 msec.
Low Pressure	BS9450	Section 1.2.6.12 225mmHg (altitude 9000m). 600mmHg (altitude 2400m).
Transport and Storage – Operation – Humidity	BS9450	Section 1.2.6.4 96 Hours @ 45°C, 95% relative humidity plus condensed water.

## Application Recommendations

Due to the very low levels of signal and idle channel noise specified in the Eurocom Basic Parameters Specification D1 – IA8 – a noisy or badly regulated power supply could cause instability putting the overall system performance out of specification. Adherence to the points noted below will assist in minimizing this problem.

- |   |  |
|---|--|
| (a) Care should be taken on the design and layout of the printed circuit board.                         | (e) Inputs and outputs should be screened wherever possible.   |
| (b) All external components (as recommended in Figure 3) should be kept close to the package.           | (f) A "ground plane" connected to $V_{SS}$ will assist in eliminating external pick-up on the input and output pins.   |
| (c) Tracks should be kept short, particularly the Encoder Input capacitor and the $V_{BIAS}$ capacitor. | (g) It is recommended that the power supply rails have less than 1mVrms of noise allowed.  |
| (d) Xtal/clock tracks should be kept well away from analogue inputs and outputs.                        | (h) The source impedance to the Encoder Input pin must be less than $100\Omega$ , Output Idle channel noise levels will improve with even lower source impedances. |

## Package Outlines

The FX619 is available in the package styles outlined below. Mechanical package diagrams and specifications are detailed in Section 10 of this document. Pin 1 identification marking is shown on the relevant diagram and pins on all package styles number anti-clockwise when viewed from the top.

## CML Product Data

In the process of creating a more global image, the three standard product semiconductor companies of CML Microsystems Plc (*Consumer Microcircuits Limited (UK)*, *MX-COM, Inc (USA)* and *CML Microcircuits (Singapore) Pte Ltd*) have undergone name changes and, whilst maintaining their separate new names (*CML Microcircuits (UK) Ltd*, *CML Microcircuits (USA) Inc* and *CML Microcircuits (Singapore) Pte Ltd*), now operate under the single title **CML Microcircuits**.

These companies are all 100% owned operating companies of the CML Microsystems Plc Group and these changes are purely changes of name and do not change any underlying legal entities and hence will have no effect on any agreements or contacts currently in force.

### CML Microcircuits Product Prefix Codes

Until the latter part of 1996, the differentiator between products manufactured and sold from MXCOM, Inc. and Consumer Microcircuits Limited were denoted by the prefixes MX and FX respectively. These products use the same silicon etc. and today still carry the same prefixes. In the latter part of 1996, both companies adopted the common prefix: CMX.
