DESCRIPTION

The Fast Charger GIBLI has been designed for charging all types of batteries, including NiMH, NiCd and Li-Ion batteries in hand held mobile phones. GIBLI is a high performance high efficiency AC/DC switching mode constant voltage & current generator. The output voltage and current levels are set up by design in accordance with customer requirements.

Typical reference values in this data sheet are 10V, 800 mA with the input Vac ranging from 90 to 264 Vrms.

Coming into the small Ghibli housing, this fast charger is equipped with the European AC plug. Interface to the phone is ensured via a RG11 connector. However, the same electronic platform can be assembled upon customer request into the Robin housing. The Robin housing can be assembled with a variety of AC plug (UK, US, Australia, South Africa/India, and China), interface to the phone is ensured via a 2 wires cord with strain relief, terminated with customer specified connector. Typical weight is 70 grams only, without cable.

AGENCY Approvals

The charger is certified by competent agencies to comply with most popular safety and EMC requirements, including but not limited to:
