

FIBER OPTIC RECEIVING MODULE

TORX179FIBER OPTIC RECEIVING MODULE FOR DIGITAL
AUDIO INTERFACE

Unit in mm

- Conforms to EIAJ Standard CP-1201 (For Digital Audio Interface including Fiber Optic inter-connections).
- A self-tapping hole for easy attachment to Audio Equipments panels.

1. Maximum Ratings ($T_a = 25^\circ\text{C}$)

PARAMETER	SYMBOL	RATING	UNIT
Storage Temperature	T_{stg}	$-40 \sim 70$	$^\circ\text{C}$
Operating Temperature	T_{opr}	$-20 \sim 70$	$^\circ\text{C}$
Supply Voltage	V_{CC}	$-0.5 \sim 7$	V
High Level Output Current	I_{OH}	-1	mA
Low Level Output Current	I_{OL}	5	mA
Soldering Temperature	T_{sol}	260 ⁽¹⁾	$^\circ\text{C}$

Note ⁽¹⁾ : Soldering time ≤ 10 seconds (At a distance of 1 mm from the package).

2. Recommended Operating Conditions

PARAMETER	SYMBOL	MIN	TYP.	MAX	UNIT
Supply Voltage	V_{CC}	4.75	5.0	5.25	V

961001EAC1

- TOSHIBA is continually working to improve the quality and the reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to observe standards of safety, and to avoid situations in which a malfunction or failure of a TOSHIBA product could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent products specifications. Also, please keep in mind the precautions and conditions set forth in the TOSHIBA Semiconductor Reliability Handbook.
- Gallium arsenide (GaAs) is a substance used in the products described in this document. GaAs dust and fumes are toxic. Do not break, cut or pulverize the product, or use chemicals to dissolve them. When disposing of the products, follow the appropriate regulations. Do not dispose of the products with other industrial waste or with domestic garbage.
- The information contained herein is presented only as a guide for the applications of our products. No responsibility is assumed by TOSHIBA CORPORATION for any infringements of intellectual property or other rights of the third parties which may result from its use. No license is granted by implication or otherwise under any intellectual property or other rights of TOSHIBA CORPORATION or others.
- The information contained herein is subject to change without notice.

3. Electrical and Optical Characteristics (Ta = 25°C, V_{CC} = 5 V)

PARAMETER	SYMBOL	CONDITION	MIN	TYP.	MAX	UNIT
Data Rate		NRZ Code ⁽²⁾	0.1	—	12.8	Mb / s
Transmission Distance		Using APF ⁽³⁾ , Using TOTX179	0.2	—	5	m
Pulse Width Distortion ⁽⁴⁾	Δtw	Pulse Width = 78 ns Pulse Cycle = 156 ns $C_L = 10$ pF Using TOTX179	−25	—	25	ns
Maximum Receivable Power ⁽⁵⁾	P _{MAX}	12.8 Mb / s, Using APF	−14.5	—	—	dBm
Minimum Receivable Power ⁽⁵⁾	P _{MIN}	12.8 Mb / s, Using APF	—	—	−24	dBm
Current Consumption	I _{CC}		—	22	40	mA
High Level Output Voltage	V _{OH}		3.6	4.0	—	V
Low Level Output Voltage	V _{OL}		—	0.2	0.4	V

Note ⁽²⁾ : When non-modulated signal (optical all high or all low level signal) is inputted, output signal is not stable.

When modulated optical high level signal is received, output signal is high.

When modulated optical low level signal is received, output signal is low.

The duty factor must be maintained between 25 to 75%.

⁽³⁾ : All Plastic Fiber (970 / 1000 μ m).

⁽⁴⁾ : Between input of transmitting module and output of TORX179.

⁽⁵⁾ : $BER \leq 10^{-9}$, peak value.

4. Mechanical Characteristics (Ta = 25°C)

PARAMETER	SYMBOL	CONDITION	MIN	TYP.	MAX	UNIT
Insertion Force		Using TOCP172, Initial value	—	—	39.2	N
Withdrawal Force		Using TOCP172, Initial value	5.9	—	39.2	N
Torque for Self-Tap		Using self-tapping Screw (M3 × 8)	58.8	—	98	N·cm

5. Application Circuit

6. Required Optical Fiber with Fiber Optic Connectors

TOCP172-□□B

(3) Noise resistance

It is believed that the use of optical transfer devices improve noise resistance. In theory, optical fiber is not affected by noise at all. However, receiving modules which handle signals whose level is extremely small, are susceptible to noise.

TOSLINK improve noise resistance to use a conductive case. However, the current signal output by the optical receiving modules' photodiode is extremely small. Thus, in some environments, shielding the case may not achieve sufficient noise resistance.

For systems which incorporate TOSLINK, Toshiba recommend testing using the actual device to check its noise resistance.

Use a simple noise filter on TOSLINK fiber optic transceiving module's power line. If the ripple in the power supply used is significant, reinforce the filter.

The optical module is to be used in an area which is susceptible to radiated noise, increase the shielding by covering the optical module and the power line filter with a metallic cover.

(4) Vibration and shock

This module is plastic sealed and has its wire fixed by resin. This structure is relatively resistant to vibration and shock. In actual equipment, there are sometime cases in which vibration, shock, or stress is applied to soldered parts or connected parts, resulting in lines cut. A care must be taken in the design of equipment which will be subject to high levels of vibration.

(5) Support pins

The TORX179 has support pins in order to fix itself to the PCB temporary. Please make the hole for these pins in the PCB under the condition described in board layout hole pattern.

(6) Panel attachment

TORX179 has hole for panel attachment. Please be sure to attach it to panel with self-tapping screw.

(7) Solvent

When using solvent for flux removal, do not use a high acid or high alkali solvent. Be careful not to pour solvent in to the optical connector ports. If solvent is inadvertently poured in to them, clean it off using cotton tips.

(8) Protective cap

When the TORX179 is not in use, attach the protective cap.

(9) Supply voltage

Use the supply voltage within the recommended operating condition ($V_{CC} = 5 \pm 0.25$ V). Make sure that supply voltage does not exceed the maximum rating value of 7 V, even for an instant.

(10) Interface

The TORX179 has a TTL interface. It can be interfaced with any TTL-compatible C-MOS IC.

(11) Output

If the receiver output is at low and is connected to the power supply, or if the output is high and is connected to GND, the internal IC may be destroyed.

(12) Soldering condition

Solder at 260°C or less for no more than ten seconds.

(13) Precautions when disposing of devices and packing materials.

When disposing devices and packing materials, follow the procedures stipulated by local regulations in order to protect the environment against contamination.

(14) Precautions during use

Toshiba is continually working to improve the quality and the reliability of their products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and their vulnerability to physical stress. It is the responsibility of the buyer, when utilizing Toshiba products, to observe standards of safety, and to avoid situations in which the malfunction or failure of a Toshiba product could cause loss of human life, bodily injury or damage to property.

When developing equipment, please ensure that Toshiba products are used within the specified operating ranges set forth in the most recent product specifications. Also, please keep in mind the precautions and conditions set forth in the Toshiba Semiconductor Reliability Handbook.
