

**4-CHANNEL MOTOR DRIVER FOR DVD PLAYER****AM5954A****General Description**

The AM5954A is a four-channel BTL driver IC for driving the motors and actuators in products for DVD-player drivers. Two of the channels use current feedback to minimize the current phase shift caused by the influence of load inductance. This IC is an improved version of AZ5954.

The AM5954A is available in HSOP-28 Package.

Typical Application

**4-CHANNEL MOTOR DRIVER FOR DVD PLAYER****AM5954A****Application Information**

1. This IC has a built-in thermal shutdown circuit that mutes the output current when the chip temperature reaches 178°C (Typ). The hysteresis is set to 25°C (Typ), so the driver circuits start up again when the chip temperature falls to 153°C (Typ).
2. The driver buffer is switched off when the supply voltage falls below 3.5V (Typ), and is switched back on when the voltage reaches 3.7V (Typ) again.
3. In case standby pin voltage is under 0.5V or opened, quiescent current is muted. Standby pin voltage should be over 2.0V for normal application.
4. BIAS pin (pin 27) should be pulled up more than 1.2V. In case bias pin voltage is pulled down under 0.9V (Typ), output current is muted.
5. Insert the by-pass capacitor (approximately 0.1μF) between V_{CC}-pin and GND-pin as near as possible to this IC.
6. Heat dissipation fins are attached to the GND inside the package. Make sure to connect them to the external GND.

Supplement: (Current-feedback driver)

The transmission gain (output current/input voltage) is given by:

$$gm=1/(R_D + R_{WIRE}) (A/V)$$

R_{WIRE} is the total gold wire resistance inside the package (0.15Ω ± 0.05Ω) (Typ).
