Product description

EM3-DIN is a three-phase energy meter for the measure of active or reactive energy; the 208V_{L-L}, 220V_{L-L} and 400V_{L-L} meters are self-supplied, while the 660V_{L-L} meters are provided with auxiliary

power supply. EM3-DIN is provided with: 6+1DGT electromechanical indicator for the indication of kWh or kvarh; one green LED for the indication of power ON; one red LED blinking proportionally to the consumed energy.

Relay + open collector output Fig. 2

Only open collector outputs: the grounds of the outputs are separated, and therefore it's possible to carry out, for the same module, two different connections. The load resistance (R_c) must be designed so that the closed contact current is lower than 100mA; the VDC voltage must be lower than or equal to 30V.
