

HIGH POWER TRAVELING WAVE TUBE FOR GROUND TERMINALS LD7215W

6 GHz, 3 kW CW, PPM FOCUSING, HIGH POWER GAIN

GENERAL DESCRIPTION

NEC LD7215W is a PPM-focused traveling wave tube designed for use as final amplifier in the earth-to-satellite communications transmitter.

This is capable of delivering an output power of 3 kW over the range of 5.85 to 6.65 GHz.

It provides a high power gain of 42 dB at a rated output power.

Furthermore, this is of rugged and reliable design offering long-life service.

FEATURES

- O High Power Gain
 - The power gain is typically 42 dB minimum at 3 kW level.
- Simple Cooling System
 - The tube is forced-air-cooled, so that the cooling systems are simplified.
- O PPM Focusing
 - The tube is PPM (Periodic Permanent Magnet) -focused, eliminating entirely the focusing power supplies and interlock circuits.
- Rugged Construction
 - The tube is designed to be rugged, therefore it is suitable for transportable systems.
- Long Life and High Stability
 - The tube employs an advanced impregnated cathode with a low operating temperature for long life.
- Microdischarge Free
 - The tube is carefully designed to be free from microdischarge in the electron gun for long term operation, therefore it is suitable for digital communication service.

For safe use of microwave tubes, refer to NEC document "Safety instructions to all personnel handling electron tubes" (ET0048EJ*V*UM00)

The information in this document is subject to change without notice.

GENERAL CHARACTERISTICS

	-	\sim	EDI	\sim	ΛІ
EL	.E.	. I	ıĸı		ΗL

Frequency 5.85 to 6.65 GHz

Output Power 3 kW

Heater Voltage 6.3 V

Heater Current 4.5 A

Type of Cathode Indirectly heated, Impregnated

Cathode Warm-up Time 300 s

MECHANICAL

Dimensions See outline
Weight 30 kg approx.

Focusing Periodic Permanent Magnet

Mounting Position Any

Heater, Heater-Cathode, Helix, Anode, Collector and Thermal Protection

RF Connections

Input Type SMA Female

N / a > r

Cooling Forced Air

ABSOLUTE RATINGS (Note 1, 2 and 3)

ELECTRICAL

	Min.	Max.	Unit
Heater Voltage	6.0	6.6	V
Heater Surge Current	-	8.0	Α
Heater Current	3.0	5.0	Α
Heater Warm-up Time	300	-	S
Helix Voltage	12.5	13.7	kV
Helix Current	-	25	mA
Anode Voltage	10.0	13.0	kV
Anode Current	-0.5	0.5	mA
Collector Voltage	8.0	9.5	kV
Cathode Current	-	1.5	mA
Drive Power	-	24	mW
Load VSWR	_	1.15 : 1	

MECHANICAL

	Min.	Max.	Unit
Cooling Air Flow	720	-	kg/hr
Operating temperature	0	+45	°C
Inlet air temperature	-20	+45	.C
Storage temperature	-30	+70	.C

TYPICAL OPERATION (Note 2, 3 and 5)

			Unit
Frequency		5.85 to 6.65	GHz
Heater Voltage (Not	te 4)	6.3	V
Heater Current		4.5	Α
Helix Voltage		13.5	kV
Helix Current		10.0	mA
Anode Voltage		11.8	kV
Anode Current		0.01	mA
Collector Voltage		8.25	kV
Cathode Current		1.4	mA
Saturated Output P	ower	3.3	kW
Power Gain	at 500 W	51	dB
	at 3 kW	45	dB
Gain Variation	at 500 W	1.5	dB/800 MHz
Gain Slope	at 500 W	0.02	dB/MHz
AM-PM Conversion			
at 500 W		1.7	deg./dB
at 3 kW		3.0	deg./dB
3rd Order Intermod	ulation		
(two equal carriers,	300 W total)	-31.5	dBc
Air Flow		720	kg/hr
Air Pressure Drop		882.6	Pa

- **Note 1 :** Absolute rating should not be exceeded under continuous or transient conditions. A single absolute rating may be the limitation and simultaneous operation at more than one absolute rating may not be possible.
- Note 2: The tube body is at ground potential in operation.
- Note 3: All voltages are referred to the cathode potential except the heater voltage.
- Note 4: The optimum operating parameters are shown on a test performance sheet for each tube.
- **Note 5 :** These characteristics and operating values may be changed as a result of additional information or product improvement. NEC should be consulted before using this information for equipment design. This data sheet should not be referred to a contractual specification.
