2.3-4.1 GHz Phase Shifter

MAPCGM0003-DIE

RO-P-DS-3045 A Preliminary Information

Features

- ♦ 6 Bit Phase Shifter (0° ~ 354°, CW)
- ◆ TTL Control Inputs
- ♦ MSAG™ Process

Description

The MAPCGM0003-Die is a 6-bit Phase Shifter with Parallel Input Control. This product is fully matched to 50 ohms on both the input and output. It can be used to obtain a phase shift of 5.6° to 354° Clockwise.

Fabricated using M/A-COM's repeatable, high performance and highly reliable GaAs Multifunction Self-Aligned Gate MESFET Process, each device is 100% RF tested on wafer to ensure performance compliance.

M/A-COM's MSAG™ process features robust silicon-like manufacturing processes, planar processing of ion implanted transistors, multiple implant capability enabling power, low-noise, switch and digital FETs on a single chip, and polyimide scratch protection for ease of use with automated manufacturing processes. The use of refractory metals and the absence of platinum in the gate metal formulation prevents hydrogen poisoning when employed in hermetic packaging.

Assembly Instructions:

Die attach: Use AuSn (80/20) 1-2 mil. preform solder. Limit time @ 300 °C to less than 5 minutes.

Wirebonding: Bond @ 160 °C using standard ball or thermal compression wedge bond techniques. For DC pad connections, use either ball or wedge bonds. For best RF performance, use wedge bonds of shortest length, although ball bonds are also acceptable.

Biasing Note: Must apply negative bias to V_{EE} before applying positive bias to Control Pads.
