

1. Measurement condition

Ambient temperature T_A :	23 °C
Input power level:	0 dBm.
Terminating impedances at f_C :	for input: 448 Ω - 13,8 pF.
	for output: 374 Ω - 14,5 pF.
Q-value of matching elements:	50

2. Characteristics

Remark: Reference level for the relative attenuation a_{rel} of the TFS 140A1 is the minimum of the pass band attenuation a_{min} . The minimum of the pass band attenuation a_{min} is defined as the insertion loss a_e . The reference frequency f_C is the arithmetic mean value of the upper and lower frequencies at the 3 dB filter attenuation level relative to the insertion loss a_e . The temperature coefficient of frequency T_{c_f} is valid both for the reference frequency f_C and the frequency response of the filter in the operating temperature range. The frequency shift of the filter in the operating temperature range is not included in the production tolerance scheme
