## FEATURES

Fixed gain of 20 dB
Operation up to 500 MHz
Input/output internally matched to $50 \Omega$
Integrated bias control circuit
Output IP3
41 dBm at 70 MHz
39 dBm at 190 MHz
Output 1 dB compression: 20.6 dB at 190 MHz
Noise figure: $\mathbf{2 . 5 ~ d B}$ at 190 MHz
Single 5 V power supply
Small footprint 8-lead LFCSP
ADL5532 15 dB gain version
ADL5534 20 dB gain dual-channel version
$\pm 2$ kV ESD (Class 2)

## GENERAL DESCRIPTION

The ADL5531 is a broadband, fixed-gain, linear amplifier that operates at frequencies up to 500 MHz . The device can be used in a wide variety of equipment, including cellular, satellite, broadband, and instrumentation equipment.

The ADL5531 provides a gain of 20 dB , which is stable over frequency, temperature, power supply, and from device to device. This amplifier is single-ended and internally matched to $50 \Omega$. Only input/output ac coupling capacitors, power supply decoupling capacitors, and external inductors are required for operation.

## FUNCTIONAL BLOCK DIAGRAM

Figure 1.

The ADL5531 is fabricated on a GaAs HBT process and has an ESD rating of $\pm 2 \mathrm{kV}$ (Class 2). The device is packaged in an 8-lead $3 \mathrm{~mm} \times 3 \mathrm{~mm}$ LFCSP that uses an exposed paddle for excellent thermal impedance.

The ADL5531 consumes 100 mA on a single 5 V supply and is fully specified for operation from $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$.
The 15 dB gain version, ADL5532, and the dual-channel 20 dB gain version, ADL5534, are also available.

## ABSOLUTE MAXIMUM RATINGS

Table 3.

| Parameter | Rating |
| :--- | :--- |
| Supply Voltage on RFOUT | 5.5 V |
| Input Power on RFIN | 10 dBm |
| Internal Power Dissipation (Paddle Soldered) | 600 mW |
| $\theta_{\mathrm{JA}}$ (Junction to Air) | $103^{\circ} \mathrm{C} / \mathrm{W}$ |
| Maximum Junction Temperature | $150^{\circ} \mathrm{C}$ |
| Operating Temperature Range | $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ |
| Storage Temperature Range | $-65^{\circ} \mathrm{C}$ to $+150^{\circ} \mathrm{C}$ |
| ESD Rating-Human Body Model | $\pm 2 \mathrm{kV}$ |

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## ESD CAUTION

|  | ESD (electrostatic discharge) sensitive device. <br> Charged devices and circuit boards can discharge <br> without detection. Although this product features <br> patented or proprietary protection circuitry, damage <br> may occur on devices subjected to high energy ESD. <br> Therefore, proper ESD precautions should be taken to <br> avoid performance degradation or loss of functionality. |

## PIN CONFIGURATION AND FUNCTION DESCRIPTIONS

Figure 2. Pin Configuration

Table 4. Pin Function Descriptions

| Pin No. | Mnemonic | Description |
| :--- | :--- | :--- |
| $1,3,4,6,8$ | NC | No Connect |
| 2 | RFIN | RF Input. Requires a 10 nF dc blocking capacitor. |
| 5 | CLIN | A 1 nF capacitor connected between Pin 5 and ground provides decoupling for the on-board linearizer. |
| 7 | RFOUT | RF Output and Bias. DC bias is provided to this pin through a 470 nH inductor (Coilcraft 1008CS-471XJLC or <br> equivalent). RF path requires a 10 nF dc blocking capacitor. |
|  | Exposed Paddle | GND. Solder this paddle to a low impedance ground plane. |

## BASIC CONNECTIONS

The basic connections for operating the ADL5531 are shown in Figure 15. The input and output are ac-coupled with 10 nF (0402) capacitors. DC bias is provided to the amplifier via an inductor (Coilcraft 1008CS-471XJLC or equivalent) connected to the RFOUT pin. The bias voltage should be decoupled using 10 nF and $1 \mu \mathrm{~F}$ capacitors.

## SOLDERING INFORMATION AND RECOMMENDED PCB LAND PATTERN

Figure 14 shows the recommended land pattern for ADL5531. To minimize thermal impedance, the exposed paddle on the

Figure 14. Recommended Land Pattern package underside is soldered down to a ground plane. If multiple ground layers exist, they are stitched together using vias (a minimum of five vias is recommended). Pin 1, Pin 3, Pin 4, Pin 6 and Pin 8 can be left unconnected or can be connected to ground. Connecting these pins to ground slightly enhances thermal impedance. For more information on land pattern design and layout, refer to Application Note AN-772, A Design and Manufacturing Guide for the Lead Frame Chip Scale Package (LFCSP).

## EVALUATION BOARD

Figure 18 shows the schematic for the ADL5531 evaluation board. The board is powered by a single supply of 5 V .
The components used on the board are listed in Table 5. Power can be applied to the board through clip-on leads or through Jumper W1. Note that C4, C7, C8, L3, L4, L5, R1, and R2 have no function.
