

0.8 $\mu$ A Low Power Consumption Dual Voltage Regulator

## ■ GENERAL DESCRIPTION

The XC6411/6412 series are highly precise, low noise, positive voltage LDO dual regulators manufactured using CMOS processes. The series achieves very low supply current, 0.8 $\mu$ A / ch. (TYP.) and consists of a reference voltage source, an error amplifier, a current foldback circuit, and a phase compensation circuit plus a driver transistor. SOT-25 package for the XC6411P series, SOT-26 package for the XC6412B series and USP-6C package for the XC6412C series (preliminary) make high density mounting possible. Therefore, the series is ideal for applications where high density mounting is required such as in mobile equipment.

Output voltage of each regulators VR1 and VR2 is selectable in 100mV increments within a range of 0.9V to 5.0V by laser trimming. The series is also compatible with low ESR ceramic capacitors, which give added output stability. VR1 and VR2 are completely isolated. For this, a cross talk between each channel, which causes a problem during load fluctuations, can be greatly reduced, and the stabilized voltage can be supplied. The current limiter's foldback circuit also operates as a short protect for the output pin.

## ■ APPLICATIONS

- MP3 players, Portable AV equipment
- Mobile phones
- Cordless phones,  
wireless communication equipment
- Portable games
- Cameras, Video recorders
- PDAs

## ■ FEATURES

- Maximum Output Current** : 200mA (300mA Limit, TYP.)  
@  $V_{OUT}=3.0V$ ,  $V_{IN}=4.0V$
- Dropout Voltage** : 320mV @  $I_{OUT} = 100mA$   
@  $V_{OUT} = 3.0V$
- Input Voltage Range** : 1.5V ~ 6.0V
- Output Voltage Range** : 0.9V ~ 5.0V (100mV increments)
- Highly Accurate** : Set voltage accuracy  $\pm 2\%$   
( $1.5V < V_{OUT(T)} \leq 5.0V$ )  
Set voltage accuracy  $\pm 30mV$   
( $0.9V \leq V_{OUT(T)} \leq 1.5V$ )
- Low Power Consumption** : 0.8 $\mu$ A / ch.(TYP.)
- Operating Temperature Range** : - 40 $^{\circ}C$  ~ 85 $^{\circ}C$
- Low ESR Capacitor Compatible**: Ceramic capacitor
- Current Limiter Circuit Built-In**
- Ultra Small Packages** : SOT-25 (XC6411P)  
: SOT-26 (XC6412B)  
: USP-6C (XC6412C) \*Preliminary

## ■ TYPICAL APPLICATION CIRCUIT

## ■ TYPICAL PERFORMANCE CHARACTERISTICS

- Supply Current vs. Input Voltage

VR1/VR2: 3.0V

CIN=1.0 $\mu$ F(ceramic), CL=0.1 $\mu$ F(ceramic)

## PIN CONFIGURATION

XC6412C Series  
USP-6C (BOTTOM VIEW)

\*Preliminary

\* The dissipation pad for the USP-6C package should be solder-plated in recommended mount pattern and metal masking so as to enhance mounting strength and heat release. If the pad needs to be connected to other pins, it should be connected to the Vss pin (pin # 5).

## PIN ASSIGNMENT

PIN NUMBER			PIN NAME	FUNCTION
XC6411P SOT-25	XC6412B SOT-26	XC6412C USP-6C		
1	4	3	VOUT2	Output 2
2	5	2	VSS	Ground
3	6	1	VOUT1	Output 1
-	1	-	VIN	Power Input
4	-	6	VIN1	Power Input 1
5	-	5	VIN2	Power Input 2
-	3	4	EN2	ON / Off Switch (ch. 2)
-	2	-	NC	No Connection

\* When using an SOT-26 package of the XC6412B series, please use No. 1 pin as power input of the whole IC.

## PRODUCT CLASSIFICATION

### Ordering Information

XC6411P①②③④⑤

XC6412B①②③④⑤

XC6412C①②③④⑤ \*Preliminary

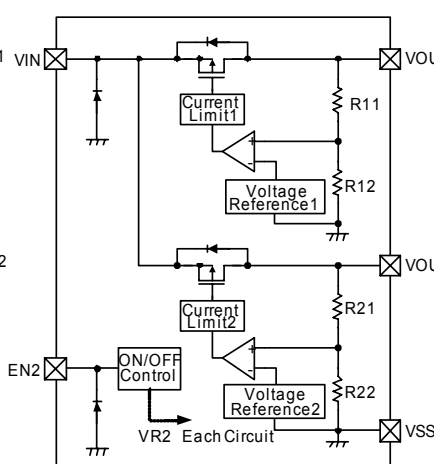

DESIGNATOR	DESCRIPTION	SYMBOL	DESCRIPTION
①②③	Output Voltage	001~	: Internally set sequential number relating output voltage of each regulator. Regulator 1 and 2 output voltage range→0.9~5.0V (100V increments)
④	Package	M	: SOT-25 (XC6411P) : SOT-26 (XC6412B)

## OPERATIONAL EXPLANATION

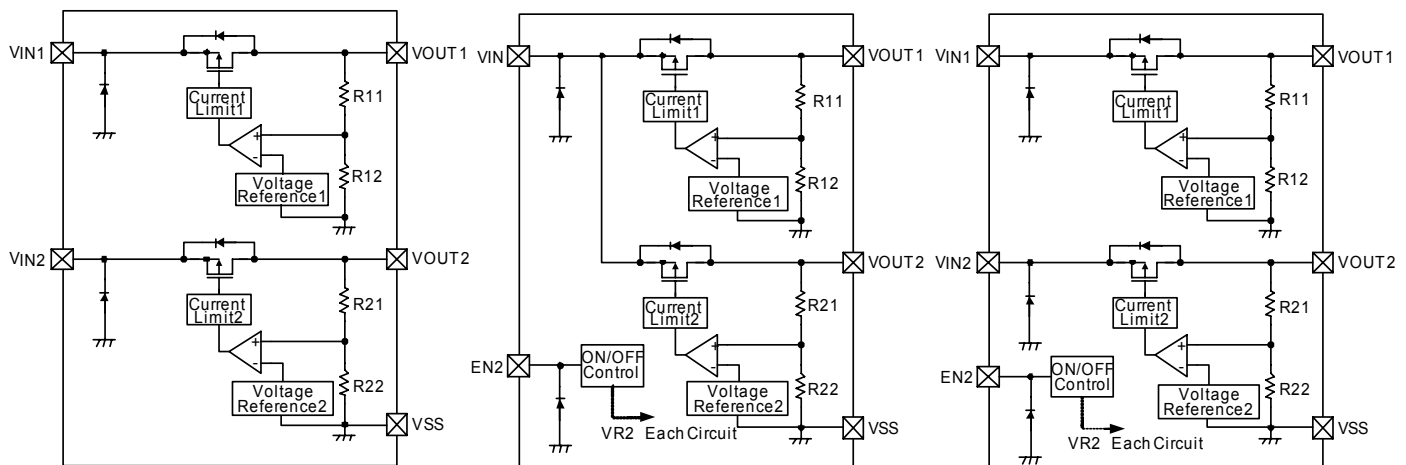

### <Output Voltage Control>

The voltage, divided by resistors R11 & R12 for a regulator 1 and R21 & R22 for a regulator 2 is compared with the internal reference voltage by the error amplifier. These resistors are connected to the VOUT pin. The P-channel MOSFET, which is connected to the VOUT pin, is then driven by the subsequent output signal. The output voltage at the VOUT pin is controlled and stabilized by a system of negative feedback. The current limit circuit operates when the load current reaches the current limit level.

#### ●XC6411P Series

#### ●XC6412B Series (SOT-26)

#### ●XC6412C Series (USP-6C) \*Preliminary

\* Diodes shown in the above circuit are ESD protection diodes and parasitic diodes.

### <Dual Inputs>

The power input voltage pin of the regulator 1 and regulator 2 in the XC6411P/XC6412C series operate independently of absolute, which makes the circuit structure efficiently.

### <Short Protection Circuit>

The XC6411P/6412 series' regulator offers short-circuit protection by means of a built-in foldback circuit. When the load current reaches the current limit level, the fixed current limiter circuit operates and output voltage drops. As a result of this drop in output voltage, the foldback circuit operates, the output voltage drops further and output current decreases. When the output voltage pin is shorted, a current of about 50mA flows.

### <EN2 Pin>

The regulator 2's internal circuitry can be operated or shutdown via the signal from the EN2 pin with the XC6412 series. In so doing the regulator 1 maintains an operational state constantly. In shutdown mode, output at the VOUT2 pin will be pulled down to the Vss level via R21 & R22. Note that the XC6412 series' regulator is "High Active/No Pull-Down", operations will become unstable with the EN2 pin open. We suggest that you use this IC with either a VIN voltage or a Vss voltage input at the EN2 pin. If this IC is used with the correct specifications for the EN pin, the operational logic is fixed and the IC will operate normally. However, supply current may increase as a result of through current in the IC's internal circuitry.

## NOTES ON USE

1. Please use this IC within the stated absolute maximum ratings. The IC is liable to malfunction should the ratings be exceeded.
2. Where wiring impedance is high, operations may become unstable due to noise and/or phase lag depending on output current.
3. As for the XC6412 series, internally achieved phase compensation makes a stable operation of the IC possible even when there is no output capacitor (CL). In order to stabilize the VIN's voltage level, we recommend that an input capacitor (CIN) of about 0.1 to 1.0  $\mu$ F be connected between each VIN pin and the Vss pin. Moreover, during transient response, so as to prevent an undershoot or overshoot, we recommend that the output capacitor (CL) of about 0.1 to 1.0  $\mu$ F be connected between each VOUT pin and the Vss pin. However, please wire the input capacitor (CIN) and the output capacitor (CL) as close to the IC as possible.
4. The XC6412C series (USP-6C package) is under development.
