F²MC-8FX MB95110M series

MB95117M/F114MS/F114NS/F114JS/F116MS/F116NS/F116JS/
MB95F118MS/F118NS/F118JS/F114MW/F114NW/F114JW/
MB95F116MW/F116NW/F116JW/F118MW/F118NW/F118JW/FV100D-103

■ DESCRIPTION

The MB95110M series is general-purpose, single-chip microcontrollers. In addition to a compact instruction set, the microcontrollers contain a variety of peripheral functions.

Note : F²MC is the abbreviation of FUJITSU Flexible Microcontroller.

■ FEATURES

- F²MC-8FX CPU core
 - Instruction set optimized for controllers
 - Multiplication and division instructions
 - 16-bit arithmetic operations
 - Bit test branch instruction
 - Bit manipulation instructions etc.
- Clock
 - Main clock
 - Main PLL clock
 - Sub clock (for dual clock product)
 - Sub PLL clock (for dual clock product)

(Continued)

Be sure to refer to the "Check Sheet" for the latest cautions on development.

"Check Sheet" is seen at the following support page
URL : <http://edevic.fujitsu.com/micom/en-support/>

"Check Sheet" lists the minimal requirement items to be checked to prevent problems beforehand in system development.

MB95110M Series

(Continued)

- Timer
 - 8/16-bit compound timer × 2 channels
Can be used to interval timer, PWC timer, PWM timer and input capture.
 - 8/16-bit PPG × 2 channels
 - 16-bit PPG × 1 channel
 - Time-base timer × 1 channel
 - Watch prescaler (for dual clock product) × 1 channel
- LIN-UART × 1 channel
 - LIN function, clock asynchronous (UART) or clock synchronous (SIO) serial data transfer capable
 - Full duplex double buffer
- UART/SIO × 1 channel
 - Clock asynchronous (UART) or clock synchronous (SIO) serial data transfer capable
 - Full duplex double buffer
- I²C* × 1 channel
 - Built-in wake-up function
- External interrupt × 8 channels
 - Interrupt by edge detection (rising, falling, or both edges can be selected)
 - Can be used to recover from low-power consumption (standby) modes.
- 8/10-bit A/D converter × 8 channels
 - 8-bit or 10-bit resolution can be selected
- Low-power consumption (standby) mode
 - Stop mode
 - Sleep mode
 - Watch mode (for dual clock product)
 - Time-base timer mode
- I/O port
 - The number of maximum ports
 - Single clock product : 39 ports
 - Dual clock product : 37 ports
 - Configuration
 - General-purpose I/O ports (N-ch open drain) : 2 ports
 - General-purpose I/O ports (CMOS) : Single clock product : 37 ports
Dual clock product : 35 ports
- Programmable input voltage levels of port
 - Automotive input level / CMOS input level / hysteresis input level
- Dual operation Flash memory
 - Erase/Write and read can be executed in the different bank (Upper Bank/Lower Bank) at the same time.
- Flash memory security function
 - Protects the content of Flash memory (Flash memory device only)

* : Purchase of Fujitsu I²C components conveys a license under the Philips I²C Patent Rights to use, these components in an I²C system provided that the system conforms to the I²C Standard Specification as defined by Philips.

Part number		MB95117M	MB95F114MS/ MB95F116MS/ MB95F118MS	MB95F114NS/ MB95F116NS/ MB95F118NS	MB95F114MW/ MB95F116MW/ MB95F118MW	MB95F114NW/ MB95F116NW/ MB95F118NW	MB95F114JS/ MB95F116JS/ MB95F118JS	MB95F114JW/ MB95F116JW/ MB95F118JW
Parameter								
Type	MASK ROM product	Flash memory product						
ROM capacity*1	48 Kbytes	60 Kbytes (Max)						
RAM capacity*1	2 Kbytes (Max)							
Reset output	Yes/No	Yes					No	
Option*2	Clock system	Selectable single/dual clock*3	Single clock		Dual clock		Single clock	Dual clock
	Low voltage detection reset	Yes / No	No	Yes	No	Yes	Yes	
	Clock supervisor	Yes / No	No					Yes
CPU functions	Number of basic instructions : 136 Instruction bit length : 8 bits Instruction length : 1 to 3 bytes Data bit length : 1, 8, and 16 bits Minimum instruction execution time : 61.5 ns (at machine clock frequency 16.25 MHz) Interrupt processing time : 0.6 μs (at machine clock frequency 16.25 MHz)							
Peripheral functions	General purpose I/O ports	<ul style="list-style-type: none"> • Single clock product : 39 ports (N-ch open drain : 2 ports, CMOS : 37 ports) • Dual clock product : 37 ports (N-ch open drain : 2 ports, CMOS : 35 ports) Programmable input voltage levels of port : Automotive input level / CMOS input level / hysteresis input level						
	Time-base timer (1 channel)	Interrupt cycle : 0.5 ms, 2.1 ms, 8.2 ms, 32.8 ms (at main oscillation clock 4 MHz)						
	Watchdog timer	Reset generated cycle At main oscillation clock 10 MHz : Min 105 ms At sub oscillation clock 32.768 kHz (for dual clock product) : Min 250 ms						
	Wild register	Capable of replacing 3 bytes of ROM data						
	I ² C (1 channel)	Master/slave sending and receiving Bus error function and arbitration function Detecting transmitting direction function Start condition repeated generation and detection functions Built-in wake-up function						
UART/SIO (1 channel)	Data transfer capable in UART/SIO Full duplex double buffer, variable data length (5/6/7/8-bit), built-in baud rate generator NRZ type transfer format, error detected function LSB-first or MSB-first can be selected. Clock asynchronous (UART) or clock synchronous (SIO) serial data transfer capable

Parameter								
Peripheral functions	LIN-UART (1 channel)	Dedicated reload timer allowing a wide range of communication speeds to be set. Full duplex double buffer. Clock asynchronous (UART) or clock synchronous (SIO) serial data transfer capable. LIN functions available as the LIN master or LIN slave.						
	8/10-bit A/D converter (8 channels)	8-bit or 10-bit resolution can be selected.						
	8/16-bit compound timer (2 channels)	Each channel of the timer can be used as “8-bit timer × 2 channels” or “16-bit timer × 1 channel”. Built-in timer function, PWC function, PWM function, capture function, and square waveform output Count clock : 7 internal clocks and external clock can be selected						
	16-bit PPG (1 channel)	PWM mode or one-shot mode can be selected. Counter operating clock : 8 selectable clock sources Support for external trigger start						
	8/16-bit PPG (2 channels)	Each channel of the PPG can be used as “8-bit PPG × 2 channels” or “16-bit PPG × 1 channel”. Counter operating clock : Eight selectable clock sources						
	Watch counter (for dual clock product)	Count clock : 4 selectable clock sources (125 ms, 250 ms, 500 ms, or 1 s) Counter value can be set from 0 to 63 (Capable of counting for 1minute when selecting clock source 1 second and setting counter value to 60).						
	Watch prescaler (for dual clock product) (1 channel)	4 selectable interval times (125 ms, 250 ms, 500 ms, or 1 s)						
	External interrupt (8 channels)	Interrupt by edge detection (rising, falling, or both edges can be selected.) Can be used to recover from standby modes.						
Flash memory	Supports automatic programming, Embedded Algorithm Write/Erase/Erace-Suspend/Resume commands A flag indicating completion of the algorithm Number of write/erase cycles (Minimum) : 10000 times Data retention time: 20 years Erase can be performed on each block Block protection with external programming voltage Dual operation Flash memory Flash Security Feature for protecting the content of the Flash							
Standby mode	Sleep, stop, watch (for dual clock product) , and time-base timer							

*1 : For ROM capacitance and RAM capacitance, refer to “**MEMORY LINEUP**”.

*2 : When the MASK ROM is ordered, please select yes/no for the clock mode, low voltage detection, clock supervisor and reset output.

*3 : Specify clock mode when ordering MASK ROM.

Note : Part number of the evaluation products in MB95110M series is MB95FV100D-103. When using it, the MCU board (MB2146-303A) is required.

MB95110M Series

■ OSCILLATION STABILIZATION WAIT TIME

The initial value of the main clock oscillation stabilization wait time is fixed to the maximum value. The maximum value is shown as follows.

Oscillation stabilization wait time	Remarks
$(2^{14}-2) / F_{CH}$	Approx. 4.10 ms (at main oscillation clock 4 MHz)

■ DIFFERENCES AMONG PRODUCTS AND NOTES ON SELECTING PRODUCTS

• Notes on Using Evaluation Products

The Evaluation product has not only the functions of the MB95110M series but also those of other products to support software development for multiple series and models of the F²MC-8FX family. The I/O addresses for peripheral resources not used by the MB95110M series are therefore access-barred. Read/write access to these access-barred addresses may cause peripheral resources supposed to be unused to operate, resulting in unexpected malfunctions of hardware or software.

Particularly, do not use word access to odd numbered byte address in the prohibited areas (If these access are used, the address may be read or write unexpectedly) .

Also, as the read values of prohibited addresses on the evaluation product are different to the values on the Flash memory and MASK ROM products, do not use these values in the program.

The functions corresponding to certain bits in single-byte registers may not be supported on some MASK ROM products and Flash memory products. However, reading or writing to these bits will not cause malfunction of the hardware. Also, as the evaluation, Flash memory products are designed to have identical software operation, no particular precautions are required.

• Difference of Memory Spaces

If the amount of memory on the Evaluation product is different from that of the Flash memory or MASK ROM product, carefully check the difference in the amount of memory from the model to be actually used when developing software.

For details of memory space, refer to “■ CPU CORE”.

• Current Consumption

- The current consumption of Flash memory product is typically greater than for MASK ROM product.
- For details of current consumption, refer to “■ ELECTRICAL CHARACTERISTICS”.

• Package

For details of information on each package, refer to “■ PACKAGE AND CORRESPONDING PRODUCTS” and “■ PACKAGE DIMENSIONS”.

• Operating Voltage

The operating voltage are different among the Evaluation, Flash memory, and MASK ROM products.

For details of operating voltage, refer to “■ ELECTRICAL CHARACTERISTICS”

• Difference between $\overline{\text{RST}}$ and MOD Pins

A pull-down resistor is provided for the MOD pin of the MASK ROM product.

MB95110M Series

■ PIN ASSIGNMENTS

■ PIN DESCRIPTION

Pin no.	Pin name	I/O Circuit type*	Function
1	P65/SCK	K	General-purpose I/O port. The pin is shared with LIN-UART clock I/O.
2	P66/SOT		General-purpose I/O port. The pin is shared with LIN-UART data output.
3	P67/SIN	L	General-purpose I/O port. The pin is shared with LIN-UART data input.
4	P37/AN07	J	General-purpose I/O port. The pins are shared with A/D converter analog input.
5	P36/AN06		
6	P35/AN05		
8	P34/AN04		
9	P33/AN03		
10	P32/AN02		
11	P31/AN01		
12	P30/AN00		
13	AVss	—	A/D converter power supply pin (GND)
14	AVcc	—	A/D converter power supply pin
15	P24/EC0	H	General-purpose I/O port. The pin is shared with 8/16-bit compound timer ch.0 clock input.
16	P23/TO01		General-purpose I/O port. The pins are shared with 8/16-bit compound timer ch.0 output.
17	P22/TO00		
18	P21/PPG01		General-purpose I/O port. The pins are shared with 8/16-bit PPG ch.0 output.
19	P20/PPG00		
21	P51/SDA0	I	General-purpose I/O port. The pin is shared with I ² C ch.0 data I/O.
22	P50/SCL0		General-purpose I/O port. The pin is shared with I ² C ch.0 clock I/O.
23	MOD	B	Operating mode designation pin
24	X0	A	Main clock oscillation input pin
25	X1		Main clock oscillation I/O pin
26	Vss	—	Power supply pin (GND)
27	Vcc	—	Power supply pin
28	C	—	Capacitor connection pin
29	PG2/X1A	H/A	Single clock product is general-purpose port (PG2). Dual clock product is sub clock I/O oscillation pin (32 kHz).
30	PG1/X0A		Single clock product is general-purpose port (PG1). Dual clock product is sub clock input oscillation pin (32 kHz).
31	$\overline{\text{RST}}$	B'	Reset pin

MB95110M Series

■ HANDLING DEVICES

- Preventing Latch-up

Care must be taken to ensure that maximum voltage ratings are not exceeded when they are used.

Latch-up may occur on CMOS ICs if voltage higher than V_{CC} or lower than V_{SS} is applied to input and output pins other than medium- and high-withstand voltage pins or if higher than the rating voltage is applied between V_{CC} pin and V_{SS} pin.

When latch-up occurs, power supply current increases rapidly and might thermally damage elements.

Also, take care to prevent the analog power supply voltage (AV_{CC}) and analog input voltage from exceeding the digital power supply voltage (V_{CC}) when the analog system power supply is turned on or off.

- Stable Supply Voltage

Supply voltage should be stabilized.

A sudden change in power-supply voltage may cause a malfunction even within the guaranteed operating range of the V_{CC} power-supply voltage.

For stabilization, in principle, keep the variation in V_{CC} ripple (p-p value) in a commercial frequency range (50/60 Hz) not to exceed 10% of the standard V_{CC} value and suppress the voltage variation so that the transient variation rate does not exceed 0.1 V/ms during a momentary change such as when the power supply is switched.

- Precautions for Use of External Clock

Even when an external clock is used, oscillation stabilization wait time is required for power-on reset, wake-up from sub clock mode or stop mode.

PIN CONNECTION

- Treatment of Unused Pin

Leaving unused input pins unconnected can cause abnormal operation or latch-up, leaving to permanent damage.

Unused input pins should always be pulled up or down through resistance of at least 2 k Ω . Any unused input/output pins may be set to output mode and left open, or set to input mode and treated the same as unused input pins. If there is unused output pin, make it open.

- Treatment of Power Supply Pins on A/D Converter

Connect to be $AV_{CC} = V_{CC}$ and $AV_{SS} = V_{SS}$ even if the A/D converter is not in use.

Noise riding on the AV_{CC} pin may cause accuracy degradation. So, connect approx. 0.1 μ F ceramic capacitor as a bypass capacitor between AV_{CC} and AV_{SS} pins in the vicinity of this device.

- Power Supply Pins

In products with multiple V_{CC} or V_{SS} pins, the pins of the same potential are internally connected in the device to avoid abnormal operations including latch-up. However, you must connect the pins to external power supply and a ground line to lower the electro-magnetic emission level, to prevent abnormal operation of strobe signals caused by the rise in the ground level, and to conform to the total output current rating.

Moreover, connect the current supply source with the V_{CC} and V_{SS} pins of this device at the low impedance.

It is also advisable to connect a ceramic bypass capacitor of approximately 0.1 μ F between V_{CC} and V_{SS} pins near this device.

- Mode Pin (MOD)

Connect the MOD pin directly to V_{CC} or V_{SS} pins.

To prevent the device unintentionally entering test mode due to noise, lay out the printed circuit board so as to minimize the distance from the MOD pin to V_{CC} or V_{SS} pins and to provide a low-impedance connection.

Use a ceramic capacitor or a capacitor with equivalent frequency characteristics. A bypass capacitor of V_{CC} pin must have a capacitance value higher than C_s . For connection of smoothing capacitor C_s , refer to the diagram below.

- C pin connection diagram

- NC Pins

Any pins marked "NC" (not connected) must be left open.

- Analog Power Supply

Always set the same potential to AV_{CC} and V_{CC} . When $V_{CC} > AV_{CC}$, the current may flow through the AN00 to AN07 pins.

MB95110M Series

PROGRAMMING FLASH MEMORY MICROCONTROLLERS USING PARALLEL PROGRAMMER

Supported Parallel Programmers and Adapters

The following table lists supported parallel programmers and adapters.

Package	Applicable adapter model	Parallel programmers
FPT-52P-M01	TEF110-95118PMC	AF9708 (Ver 02.35G or more) AF9709/B (Ver 02.35G or more) AF9723+AF9834 (Ver 02.08E or more)

Note : For information on applicable adapter models and parallel programmers, contact the following:
Flash Support Group, Inc. TEL: +81-53-428-8380

Sector Configuration

The individual sectors of Flash memory correspond to addresses used for CPU access and programming by the parallel programmer as follows:

MB95F118MS/F118NS/F118MW/F118NW/F118JS/F118JW (60 Kbytes)

Flash memory	CPU address	Programmer address*
SA1 (4 Kbytes)	1000 _H	71000 _H
	1FFF _H	71FFF _H
SA2 (4Kbytes)	2000 _H	72000 _H
	2FFF _H	72FFF _H
SA3 (4 Kbytes)	3000 _H	73000 _H
	3FFF _H	73FFF _H
SA4 (16 Kbytes)	4000 _H	74000 _H
	7FFF _H	77FFF _H
SA5 (16 Kbytes)	8000 _H	78000 _H
	BFFF _H	7BFFF _H
SA6 (4 Kbytes)	C000 _H	7C000 _H
	CFFF _H	7CFFF _H
SA7 (4 Kbytes)	D000 _H	7D000 _H
	DFFF _H	7DFFF _H
SA8 (4 Kbytes)	E000 _H	7E000 _H
	EFFF _H	7EFFF _H
SA9 (4 Kbytes)	F000 _H	7F000 _H
	FFF _H	7FFF _H

* : Programmer addresses are corresponding to CPU addresses, used when the parallel programmer programs data into Flash memory.

These programmer addresses are used for the parallel programmer to program or erase data in Flash memory.

Programming Method

- 1) Set the type code of the parallel programmer to "17222".
- 2) Load program data to programmer addresses 71000_H to 7FFFF_H.

3) Programmed by parallel programmer

- MB95F116MS/F116NS/F116JS/F116MW/F116NW/F116JW (32 Kbytes)

Flash memory	CPU address	Programmer address*
SA5 (16 Kbytes)	8000 _H	78000 _H
	BFFF _H C000 _H	7BFFF _H 7C000 _H
SA6 (4 Kbytes)	CFFF _H D000 _H	7CFFF _H 7D000 _H
	DFFF _H E000 _H	7DFFF _H 7E000 _H
SA7 (4 Kbytes)	EFFF _H F000 _H	7EFFF _H 7F000 _H
	FFFF _H	7FFFF _H

* : Programmer addresses are corresponding to CPU addresses, used when the parallel programmer programs data into Flash memory.
These programmer addresses are used for the parallel programmer to program or erase data in Flash memory.

- **Programming Method**

- 1) Set the type code of the parallel programmer to "17222".
- 2) Load program data to programmer addresses 78000_H to 7FFFF_H.
- 3) Programmed by parallel programmer

- MB95F114MS/F114NS/F114JS/F114MW/F114NW/F114JW (16 Kbytes)

Flash memory	CPU address	Programmer address*
SA6 (4 Kbytes)	C000 _H	7C000 _H
	CFFF _H D000 _H	7CFFF _H 7D000 _H
SA7 (4 Kbytes)	DFFF _H E000 _H	7DFFF _H 7E000 _H
	EFFF _H F000 _H	7EFFF _H 7F000 _H
SA8 (4 Kbytes)	FFFF _H	7FFFF _H

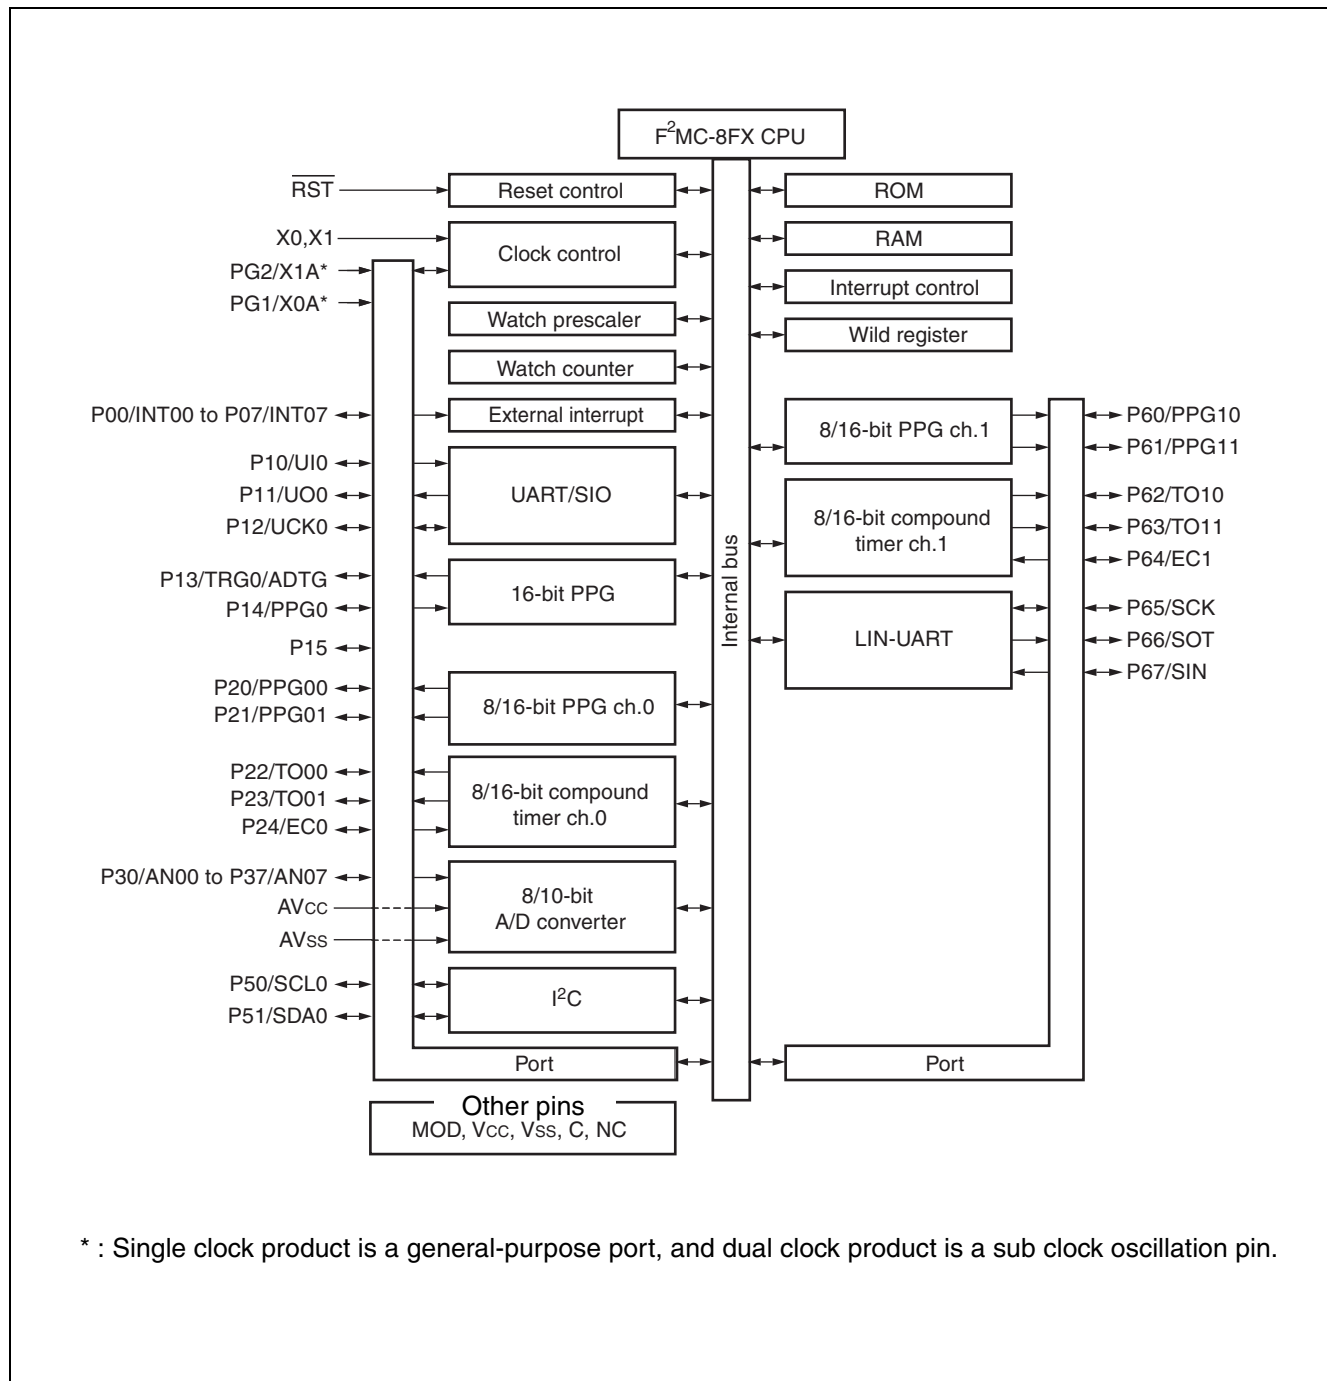

* : Programmer addresses are corresponding to CPU addresses, used when the parallel programmer programs data into Flash memory.
These programmer addresses are used for the parallel programmer to program or erase data in Flash memory.

- **Programming Method**

- 1) Set the type code of the parallel programmer to "17222".
- 2) Load program data to programmer addresses 7C000_H to 7FFFF_H.
- 3) Programmed by parallel programmer

MB95110M Series

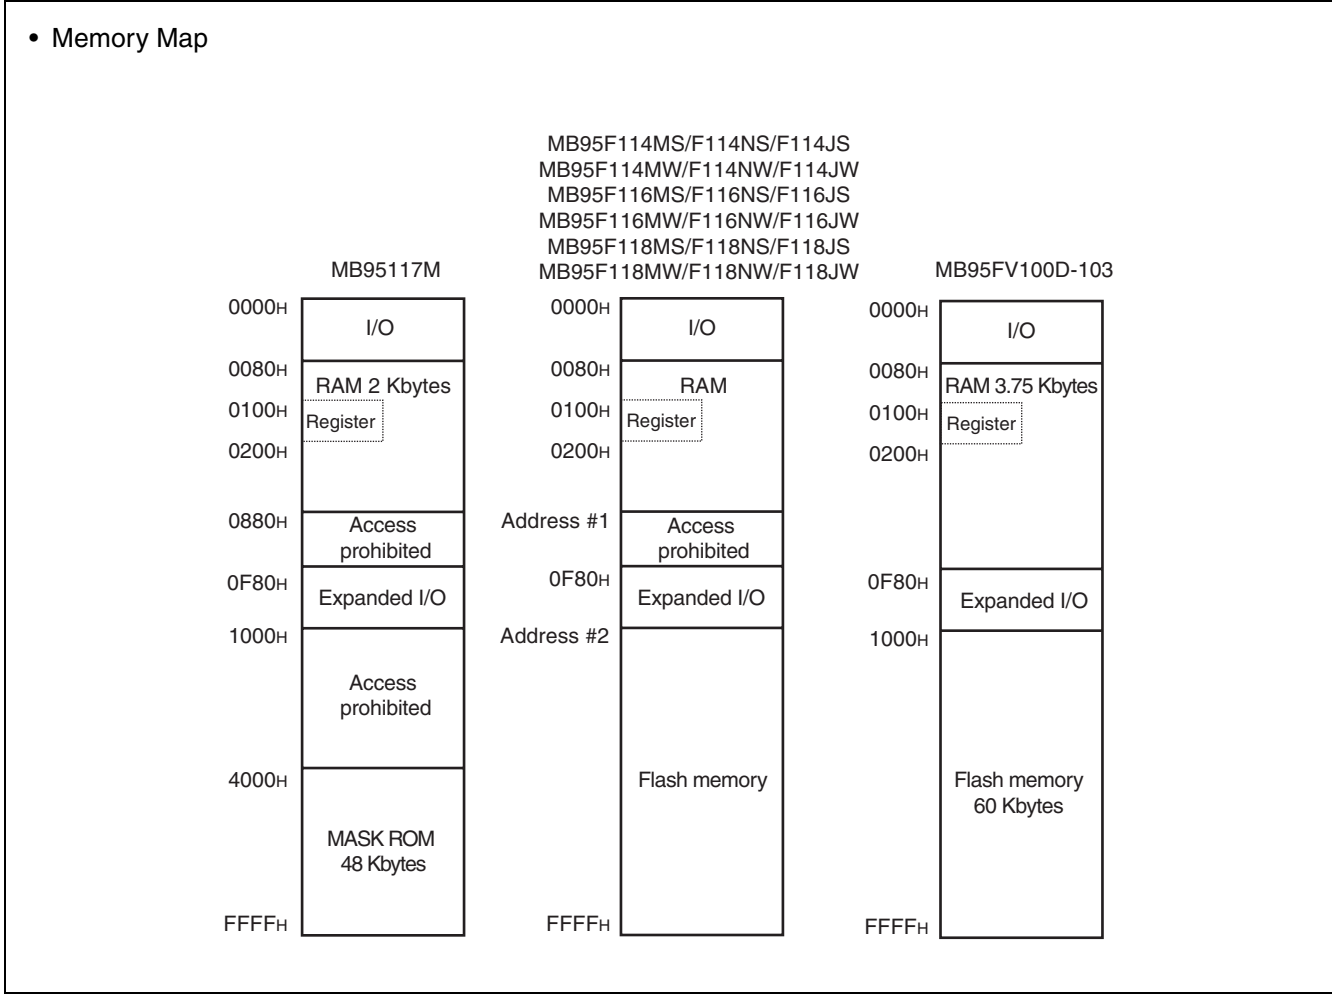

■ BLOCK DIAGRAM

■ CPU CORE

1. Memory space

Memory space of the MB95110M series is 64 Kbytes and consists of I/O area, data area, and program area. The memory space includes special-purpose areas such as the general-purpose registers and vector table. Memory map of the MB95110M series is shown below.

MB95110M Series

	Flash memory	RAM	Address #1	Address #2
MB95F114MS/F114NS/F114JS	16 Kbytes	512 bytes	0280 _H	C000 _H
MB95F114MW/F114NW/F114JW				
MB95F116MS/F116NS/F116JS	32 Kbytes	1 Kbyte	0480 _H	8000 _H
MB95F116MW/F116NW/F116JW				
MB95F118MS/F118NS/F118JS	60 Kbytes	2 Kbytes	0880 _H	1000 _H
MB95F118MW/F118NW/F118JW				

MB95110M Series

The RP indicates the address of the register bank currently being used. The relationship between the content of RP and the real address conforms to the conversion rule illustrated below:

The DP specifies the area for mapping instructions (16 different instructions such as MOV A, dir) using direct addresses to 0080H to 00FFH.

Direct bank pointer (DP2 to DP0)	Specified address area	Mapping area
XXX _B (no effect to mapping)	0000 _H to 007F _H	0000 _H to 007F _H (without mapping)
000 _B (initial value)	0080 _H to 00FF _H	0080 _H to 00FF _H (without mapping)
001 _B		0100 _H to 017F _H
010 _B		0180 _H to 01FF _H
011 _B		0200 _H to 027F _H
100 _B		0280 _H to 02FF _H
101 _B		0300 _H to 037F _H
110 _B		0380 _H to 03FF _H
111 _B		0400 _H to 047F _H

The CCR consists of the bits indicating arithmetic operation results or transfer data contents and the bits that control CPU operations at interrupt.

- H flag : Set to "1" when a carry or a borrow from bit 3 to bit 4 occurs as a result of an arithmetic operation. Cleared to "0" otherwise. This flag is for decimal adjustment instructions.
- I flag : Interrupt is enabled when this flag is set to "1". Interrupt is disabled when this flag is set to "0". The flag is set to "0" when reset.
- IL1, IL0 : Indicates the level of the interrupt currently enabled. Processes an interrupt only if its request level is higher than the value indicated by these bits.

IL1	IL0	Interrupt level	Priority
0	0	0	High ↑ ↓ Low (no interruption)
0	1	1	
1	0	2	
1	1	3	

- N flag : Set to "1" if the MSB is set to "1" as the result of an arithmetic operation. Cleared to "0" when the bit is set to "0".
- Z flag : Set to "1" when an arithmetic operation results in "0". Cleared to "0" otherwise.
- V flag : Set to "1" if the complement on 2 overflows as a result of an arithmetic operation. Cleared to "0" otherwise.
- C flag : Set to "1" when a carry or a borrow from bit 7 occurs as a result of an arithmetic operation. Cleared to "0" otherwise. Set to the shift-out value in the case of a shift instruction.

MB95110M Series

The following general-purpose registers are provided:

General-purpose registers: 8-bit data storage registers

The general-purpose registers are 8 bits and located in the register banks on the memory. 1-bank contains 8-register. Up to a total of 32 banks can be used on the MB95110M series. The bank currently in use is specified by the register bank pointer (RP), and the lower 3 bits of OP code indicates the general-purpose register 0 (R0) to general-purpose register 7 (R7).

- Register Bank Configuration

- R/W access symbols

R/W : Readable/Writable

R : Read only

W : Write only

- Initial value symbols

0 : The initial value of this bit is "0".

1 : The initial value of this bit is "1".

X : The initial value of this bit is undefined.

Note : Do not write to the "(Disabled)". Reading the "(Disabled)" returns an undefined value.

■ ELECTRICAL CHARACTERISTICS

1. Absolute Maximum Ratings

Parameter	Symbol	Rating		Unit	Remarks
		Min	Max		
Power supply voltage*1	V_{CC} AV_{CC}	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	*2
Input voltage*1	V_I	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	*3
Output voltage*1	V_O	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	*3
Maximum clamp current	I_{CLAMP}	- 2.0	+ 2.0	mA	Applicable to pins*4
Total maximum clamp current	$\Sigma I_{CLAMP} $	—	20	mA	Applicable to pins*4
“L” level maximum output current	I_{OL1}	—	15	mA	Other than P00 to P07
	I_{OL2}		15		P00 to P07
“L” level average current	I_{OLAV1}	—	4	mA	Other than P00 to P07 Average output current = operating current × operating ratio (1 pin)
	I_{OLAV2}		12		P00 to P07 Average output current = operating current × operating ratio (1 pin)
“L” level total maximum output current	ΣI_{OL}	—	100	mA	
“L” level total average output current	ΣI_{OLAV}	—	50	mA	Total average output current = operating current × operating ratio (Total of pins)
“H” level maximum output current	I_{OH1}	—	- 15	mA	Other than P00 to P07
	I_{OH2}		- 15		P00 to P07
“H” level average current	I_{OHAV1}	—	- 4	mA	Other than P00 to P07 Average output current = operating current × operating ratio (1 pin)
	I_{OHAV2}		- 8		P00 to P07 Average output current = operating current × operating ratio (1 pin)
“H” level total maximum output current	ΣI_{OH}	—	- 100	mA	
“H” level total average output current	ΣI_{OHAV}	—	- 50	mA	Total average output current = operating current × operating ratio (Total of pins)

(Continued)

(Continued)

Parameter	Symbol	Rating		Unit	Remarks
		Min	Max		
Power consumption	Pd	—	320	mW	
Operating temperature	T _A	- 40	+ 85	°C	
Storage temperature	T _{stg}	- 55	+ 150	°C	

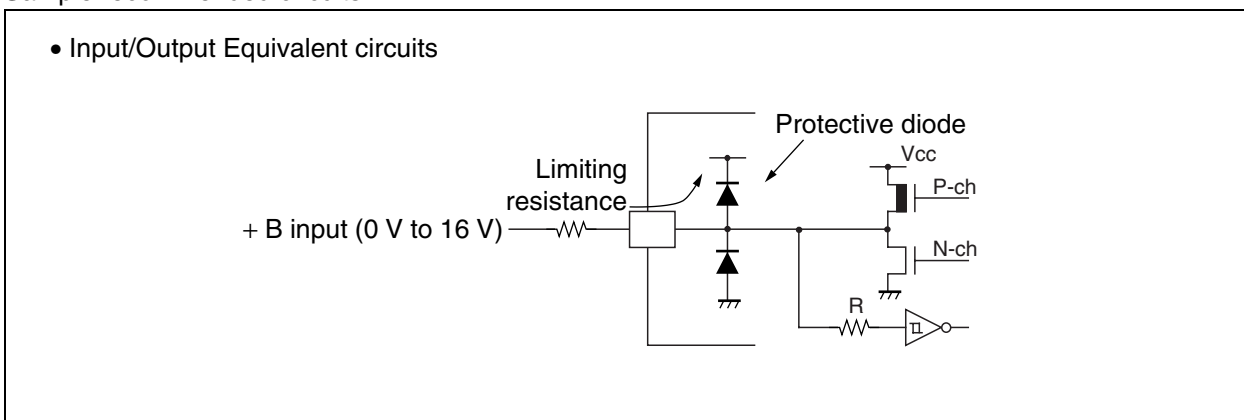

*1 : The parameter is based on AV_{SS} = V_{SS} = 0.0 V.

*2 : Apply equal potential to AV_{CC} and V_{CC}.

*3 : V_I and V_O should not exceed V_{CC} + 0.3 V. V_I must not exceed the rating voltage. However, if the maximum current to/from an input is limited by some means with external components, the I_{CLAMP} rating supersedes the V_I rating.

*4 : Applicable to pins : P00 to P07, P10 to P15, P20 to P24, P30 to P37, P60 to P67

- Use within recommended operating conditions.
- Use at DC voltage (current).
- +B signal is an input signal that exceeds V_{CC} voltage. The + B signal should always be applied a limiting resistance placed between the + B signal and the microcontroller.
- The value of the limiting resistance should be set so that when the + B signal is applied the input current to the microcontroller pin does not exceed rated values, either instantaneously or for prolonged periods.
- Note that when the microcontroller drive current is low, such as in the power saving modes, the +B input potential may pass through the protective diode and increase the potential at the V_{CC} pin, and this affects other devices.
- Note that if the + B signal is inputted when the microcontroller power supply is off (not fixed at 0 V), the power supply is provided from the pins, so that incomplete operation may result.
- Note that if the + B input is applied during power-on, the power supply is provided from the pins and the resulting power supply voltage may not be sufficient to operate the power-on reset.
- Care must be taken not to leave the + B input pin open.
- Sample recommended circuits :

WARNING: Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

MB95110M Series

2. Recommended Operating Conditions

(AV_{SS} = V_{SS} = 0.0 V)

Parameter	Symbol	Conditions	Value		Unit	Remarks	
			Min	Max			
Power supply voltage	V _{CC} , AV _{CC}	—	2.42*1	5.5	V	In normal operation	Other than MB95FV100D-103
			2.3	5.5	V	Hold condition in Stop mode	
			2.7	5.5	V	In normal operation	MB95FV100D-103
			2.3	5.5	V	Hold condition in Stop mode	
Smoothing capacitor	C _s		0.1	1.0	μF	*2	
Operating temperature	T _A		- 40	+ 85	°C	Other than MB95FV100D-103	
			+ 5	+ 35	°C	MB95FV100D-103	

*1 : The value is 2.88 V when the low voltage detection reset is used. The device operates normally during the time between 2.88 V and low voltage detection, and between release voltage and 2.88 V.

*2 : Use a ceramic capacitor or a capacitor with equivalent frequency characteristics. A bypass capacitor of V_{CC} pin must have a capacitance value higher than C_s. For connection of smoothing capacitor C_s, refer to the diagram below.

WARNING: The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the device's electrical characteristics are warranted when the device is operated within these ranges.

Always use semiconductor devices within their recommended operating condition ranges. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their representatives beforehand.

*1 : P10, P50, P51, and P67 can switch the input level to either the “CMOS input level” or “hysteresis input level”. The switching of the input level can be set by the input level selection register (ILSR).

*2 : Single clock products only

*3 : • The power-supply current is determined by the external clock. When both low voltage detection option and clock supervisor are selected, the power-supply current will be a value of adding current consumption of the low voltage detection circuit (I_{LVD}) and current consumption of built-in CR oscillator (I_{CSV}) to the specified value.

*1 : Clock before setting division due to machine clock division ratio selection bit (SYCC : DIV1 and DIV0) . This source clock is divided by the machine clock division ratio selection bit (SYCC : DIV1 and DIV0) , and it becomes the machine clock. Further, the source clock can be selected as follows.

- Main clock divided by 2
- PLL multiplication of main clock (select from 1, 2, 2.5, 4 multiplication)
- Sub clock divided by 2
- PLL multiplication of sub clock (select from 2, 3, 4 multiplication)

*2 : Operation clock of the microcontroller. Machine clock can be selected as follows.

- Source clock (no division)
- Source clock divided by 4
- Source clock divided by 8
- Source clock divided by 16

(8) I²C Timing

(V_{CC} = 5.0 V ± 10%, AV_{SS} = V_{SS} = 0.0 V, T_A = -40 °C to +85 °C)

Parameter	Symbol	Pin name	Conditions	Value				Unit
				Standard mode		Fast mode		
				Min	Max	Min	Max	
SCL clock frequency	f _{SCL}	SCL0	R = 1.7 kΩ, C = 50 pF*1	0	100	0	400	kHz
(Repeat) Start condition hold time SDA ↓ → SCL ↓	t _{HD,STA}	SCL0 SDA0		4.0	—	0.6	—	μs
SCL clock "L" width	t _{LOW}	SCL0		4.7	—	1.3	—	μs
SCL clock "H" width	t _{HIGH}	SCL0		4.0	—	0.6	—	μs
(Repeat) Start condition setup time SCL ↑ → SDA ↓	t _{SU,STA}	SCL0 SDA0		4.7	—	0.6	—	μs
Data hold time SCL ↓ → SDA ↓ ↑	t _{HD,DAT}	SCL0 SDA0		0	3.45*2	0	0.9*3	μs
Data setup time SDA ↓ ↑ → SCL ↑	t _{SU,DAT}	SCL0 SDA0		0.25	—	0.1	—	μs
Stop condition setup time SCL ↑ → SDA ↑	t _{SU,STO}	SCL0 SDA0		4	—	0.6	—	μs
Bus free time between stop condition and start condition	t _{BUF}	SCL0 SDA0		4.7	—	1.3	—	μs

*1 : R, C : Pull-up resistor and load capacitor of the SCL and SDA lines.

*2 : The maximum t_{HD,DAT} have only to be met if the device dose not stretch the "L" width (t_{LOW}) of the SCL signal.

*3 : A fast-mode I²C-bus device can be used in a standard-mode I²C-bus system, but the requirement t_{SU,DAT} ≥ 250 ns must then be met.

MB95110M Series

(V_{CC} = 5.0 V ± 10%, AV_{SS} = V_{SS} = 0.0 V, T_A = -40 °C to +85 °C)

Parameter	Symbol	Pin name	Conditions	Value*2		Unit	Remarks
				Min	Max		
SCL clock "L" width	t _{LOW}	SCL0	R = 1.7 kΩ, C = 50 pF*1	$(2 + nm / 2) t_{MCLK} - 20$	—	ns	Master mode
SCL clock "H" width	t _{HIGH}	SCL0		$(nm / 2) t_{MCLK} - 20$	$(nm / 2) t_{MCLK} + 20$	ns	Master mode
Start condition hold time	t _{HD;STA}	SCL0 SDA0		$(-1 + nm / 2) t_{MCLK} - 20$	$(-1 + nm) t_{MCLK} + 20$	ns	Master mode Maximum value is applied when m, n = 1, 8. Otherwise, the minimum value is applied.
Stop condition setup time	t _{SU;STO}	SCL0 SDA0		$(1 + nm / 2) t_{MCLK} - 20$	$(1 + nm / 2) t_{MCLK} + 20$	ns	Master mode
Start condition setup time	t _{SU;STA}	SCL0 SDA0		$(1 + nm / 2) t_{MCLK} - 20$	$(1 + nm / 2) t_{MCLK} + 20$	ns	Master mode

*1 : R, C : Pull-up resistor and load capacitor of the SCL and SDA lines.

*2 : • Refer to “(2) Source Clock/Machine Clock” for t_{MCLK} .

- m is CS4 bit and CS3 bit (bit 4 and bit 3) of clock control register (ICCR0) .
- n is CS2 bit to CS0 bit (bit 2 to bit 0) of clock control register (ICCR0) .
- Actual timing of I²C is determined by m and n values set by the machine clock (t_{MCLK}) and CS4 to CS0 of ICCR0 register.
- Standard-mode :
m and n can be set at the range : $0.9\text{ MHz} < t_{MCLK}$ (machine clock) $< 10\text{ MHz}$.
Setting of m and n limits the machine clock that can be used below.

(m, n) = (1, 8)	: $0.9\text{ MHz} < t_{MCLK} \leq 1\text{ MHz}$
(m, n) = (1, 22), (5, 4), (6, 4), (7, 4), (8, 4)	: $0.9\text{ MHz} < t_{MCLK} \leq 2\text{ MHz}$
(m, n) = (1, 38), (5, 8), (6, 8), (7, 8), (8, 8)	: $0.9\text{ MHz} < t_{MCLK} \leq 4\text{ MHz}$
(m, n) = (1, 98)	: $0.9\text{ MHz} < t_{MCLK} \leq 10\text{ MHz}$
- Fast-mode :
m and n can be set at the range : $3.3\text{ MHz} < t_{MCLK}$ (machine clock) $< 10\text{ MHz}$.
Setting of m and n limits the machine clock that can be used below.

(m, n) = (1, 8)	: $3.3\text{ MHz} < t_{MCLK} \leq 4\text{ MHz}$
(m, n) = (1, 22), (5, 4)	: $3.3\text{ MHz} < t_{MCLK} \leq 8\text{ MHz}$
(m, n) = (6, 4)	: $3.3\text{ MHz} < t_{MCLK} \leq 10\text{ MHz}$

(9) Low Voltage Detection

($V_{SS} = V_{SS} = 0.0\text{ V}$, $T_A = -40\text{ }^\circ\text{C}$ to $+85\text{ }^\circ\text{C}$)

Parameter	Symbol	Conditions	Value			Unit	Remarks
			Min	Typ	Max		
Release voltage	V_{DL+}	—	2.52	2.70	2.88	V	At power-supply rise
Detection voltage	V_{DL-}		2.42	2.60	2.78	V	At power-supply fall

Current consumption	I_{LVD}		—	38	50	μA	Current consumption for low voltage detection circuit only

MB95110M Series

(10) Clock Supervisor Clock

($V_{CC} = AV_{CC} = 5.0 \text{ V} \pm 10\%$, $AV_{SS} = V_{SS} = 0.0 \text{ V}$, $T_A = -40 \text{ }^\circ\text{C}$ to $+85 \text{ }^\circ\text{C}$)

Parameter	Symbol	Condi- tions	Value			Unit	Remarks
			Min	Typ	Max		
Oscillation frequency	f_{OUT}	—	50	100	200	kHz	
Oscillation start time	t_{wk}		—	—	10	μs	
Current consumption	I_{CSV}		—	20	36	μs	Current consumption of built-in CR oscillator, at oscillation of 100 kHz

5. A/D Converter

(1) A/D Converter Electrical Characteristics

(AVcc = Vcc = 4.0 V to 5.5 V, AVss = Vss = 0.0 V, TA = -40 °C to +85 °C)

Parameter	Symbol	Conditions	Value			Unit	Remarks
			Min	Typ	Max		
Resolution			—	—	10	bit	
Total error			-3.0	—	+3.0	LSB	
Linearity error	—		-2.5	—	+2.5	LSB	
Differential linear error			-1.9	—	+1.9	LSB	
Zero transition voltage	V _{OT}		AVss - 1.5 LSB	AVss + 0.5 LSB	AVss + 2.5 LSB	V	
Full-scale transition voltage	V _{FST}		AVcc - 3.5 LSB	AVcc - 1.5 LSB	AVcc + 0.5 LSB	V	
Compare time	—		0.9	—	16500	μs	4.5 V ≤ AVcc ≤ 5.5 V
			1.8	—	16500	μs	4.0 V ≤ AVcc < 4.5 V
Sampling time	—	—	0.6	—	∞	μs	4.5 V ≤ AVcc ≤ 5.5 V, At external impedance < 5.4 kΩ
			1.2	—	∞	μs	4.0 V ≤ AVcc < 4.5 V, At external impedance < 2.4 kΩ
Analog input current	I _{AIN}		-0.3	—	+0.3	μA	
Analog input voltage	V _{AIN}		AVss	—	AVcc	V	
Reference voltage	—		AVss + 4.0	—	AVcc	V	AVcc pin
Reference voltage supply current	I _R		—	600	900	μA	AVcc pin, During A/D operation
	I _{RH}		—	—	5	μA	AVcc pin, At stop mode

MB95110M Series

(2) Notes on Using A/D Converter

• About the external impedance of analog input and its sampling time

A/D converter with sample and hold circuit. If the external impedance is too high to keep sufficient sampling time, the analog voltage charged to the internal sample and hold capacitor is insufficient, adversely affecting A/D conversion precision. Therefore, to satisfy the A/D conversion precision standard, consider the relationship between the external impedance and minimum sampling time and either adjust the register value and operating frequency or decrease the external impedance so that the sampling time is longer than the minimum value. Also, if the sampling time cannot be sufficient, connect a capacitor of about 0.1 μF to the analog input pin.

• Analog input equivalent circuit

	R	C
$4.5 \text{ V} \leq AV_{CC} \leq 5.5 \text{ V}$	2.0 k Ω (Max)	16 pF (Max)
$4.0 \text{ V} \leq AV_{CC} < 4.5 \text{ V}$	8.2 k Ω (Max)	16 pF (Max)

Note : The values are reference values.

• The relationship between external impedance and minimum sampling time

(External impedance = 0 k Ω to 100 k Ω)

(External impedance = 0 k Ω to 20 k Ω)

• About errors

As $|AV_{CC} - AV_{SS}|$ becomes smaller, values of relative errors grow larger.

(3) Definition of A/D Converter Terms

- Resolution
The level of analog variation that can be distinguished by the A/D converter.
When the number of bits is 10, analog voltage can be divided into $2^{10} = 1024$.
- Linearity error (unit : LSB)
The deviation between the value along a straight line connecting the zero transition point (“00 0000 0000” ← → “00 0000 0001”) of a device and the full-scale transition point (“11 1111 1111” ← → “11 1111 1110”) compared with the actual conversion values obtained.
- Differential linear error (Unit : LSB)
Deviation of input voltage, which is required for changing output code by 1 LSB, from an ideal value.
- Total error (unit: LSB)
Difference between actual and theoretical values, caused by a zero transition error, full-scale transition error, linearity error, quantum error, and noise.

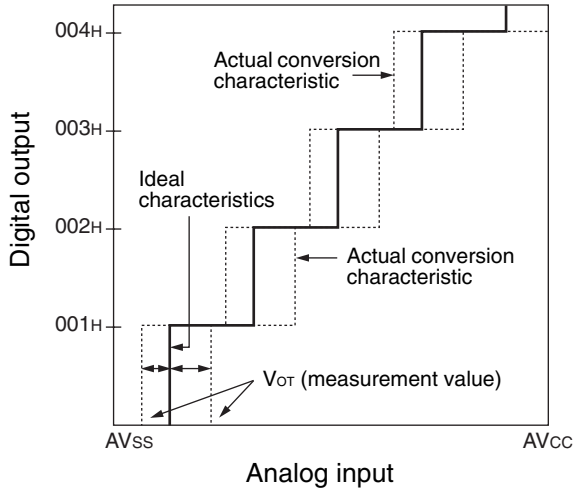

(Continued)

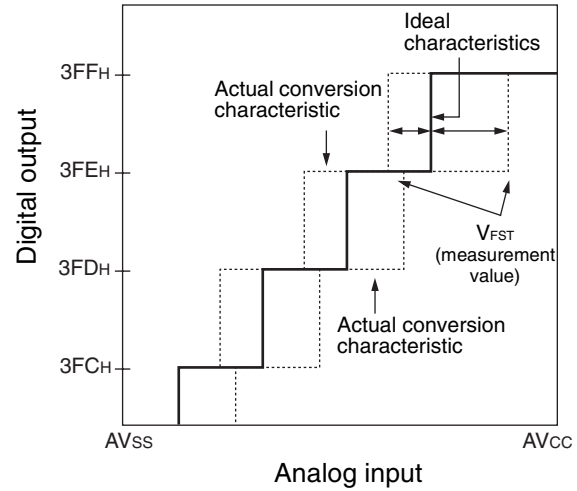

MB95110M Series

(Continued)

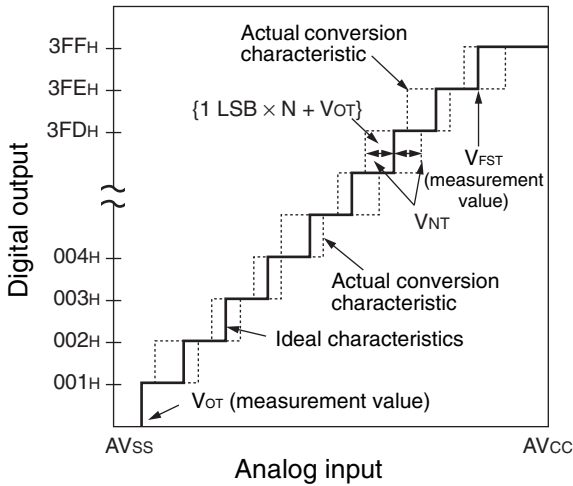

Zero transition error

Full-scale transition error

Linearity error

Differential linear error

$$\text{Linearity error in digital output } N = \frac{V_{NT} - \{1 \text{ LSB} \times N + V_{OT}\}}{1 \text{ LSB}}$$

$$\text{Differential linear error in digital output } N = \frac{V_{(N+1)T} - V_{NT}}{1 \text{ LSB}} - 1$$

- N : A/D converter digital output value
- V_{NT} : A voltage at which digital output transits from (N - 1) H to N_H.
- V_{OT} (Ideal value) = $AV_{SS} + 0.5 \text{ LSB}$ [V]
- V_{FST} (Ideal value) = $AV_{CC} - 1.5 \text{ LSB}$ [V]

6. Flash Memory Program/Erase Characteristics

Parameter	Condi- tions	Value			Unit	Remarks
		Min	Typ	Max		
Sector erase time (4 Kbytes sector)	—	—	0.2* ¹	0.5* ²	s	Excludes 00 _H programming prior erasure.
Sector erase time (16 Kbytes sector)		—	0.5* ¹	7.5* ²	s	Excludes 00 _H programming prior erasure.
Byte programming time		—	32	3600	μs	Excludes system-level overhead.
Program/erase cycle		10000	—	—	cycle	
Power supply voltage at program/erase		4.5	—	5.5	V	
Flash memory data retention time		20* ³	—	—	year	Average T _A = +85 °C

*1 : T_A = + 25 °C, V_{CC} = 5.0 V, 10000 cycles

*2 : T_A = + 85 °C, V_{CC} = 4.5 V, 10000 cycles

*3 : This value comes from the technology qualification (using Arrhenius equation to translate high temperature measurements into normalized value at +85 °C) .

■ MAIN CHANGES IN THIS EDITION

Page	Section	Change Results
—	—	No third edition in the DS07-12611-4E.
2	■ FEATURES	Added the description Dual operation Flash memory.
4	■ PRODUCT LINEUP	Changed the contents of Option.
6	■ PACKAGES AND CORRESPONDING PRODUCTS	Changed FPT-52P-M01 of MB95117M as follows; * (Under development) → ○ (Available).
7	■ DIFFERENCES AMONG PRODUCTS AND NOTES ON SELECTING PRODUCTS • Difference between \overline{RST} and MOD Pins	Deleted as follows; “The input type of \overline{RST} and MOD pins is CMOS inputs on the Flash memory product. The \overline{RST} and MOD pins are hysteresis inputs on the MASK ROM product.”
11	■ I/O CIRCUIT TYPE	Changed as follows in the remarks of “Type B”. Hysteresis input only for MASK ROM product → Hysteresis input
24	■ I/O MAP	Changed as follows for R/W of Reset source register R → R/W
37	■ ELECTRICAL CHARACTERISTICS 4. AC Characteristics (1) Clock Timing	Added “Main PLL multiplied by 4” in the Clock frequency
39	(2) Source Clock/Machine Clock	<ul style="list-style-type: none"> • Changed in the remarks of source clock cycle time (when using main clock) Min : $F_{CH} = 16.25$ MHz, PLL multiplied by 1 → Min : $F_{CH} = 8.125$ MHz, PLL multiplied by 2 • Changed the footnote of *1; PLL multiplication of main clock (select from 1, 2, 2.5 multiplication) → PLL multiplication of main clock (select from 1, 2, 2.5, 4 multiplication) • Added “ × 4” in the Main PLL of “• Outline of clock generation block”
41		Changed the figure of • Main PLL operation frequency
62 to 67	■ EXAMPLE CHARACTERISTICS	Added the ■ EXAMPLE CHARACTERISTICS

The vertical lines marked in the left side of the page show the changes.

All Rights Reserved.

The contents of this document are subject to change without notice.

Customers are advised to consult with sales representatives before ordering.

The information, such as descriptions of function and application circuit examples, in this document are presented solely for the purpose of reference to show examples of operations and uses of FUJITSU MICROELECTRONICS device; FUJITSU MICROELECTRONICS does not warrant proper operation of the device with respect to use based on such information. When you develop equipment incorporating the device based on such information, you must assume any responsibility arising out of such use of the information.

FUJITSU MICROELECTRONICS assumes no liability for any damages whatsoever arising out of the use of the information.

Any information in this document, including descriptions of function and schematic diagrams, shall not be construed as license of the use or exercise of any intellectual property right, such as patent right or copyright, or any other right of FUJITSU MICROELECTRONICS or any third party or does FUJITSU MICROELECTRONICS warrant non-infringement of any third-party's intellectual property right or other right by using such information. FUJITSU MICROELECTRONICS assumes no liability for any infringement of the intellectual property rights or other rights of third parties which would result from the use of information contained herein.

The products described in this document are designed, developed and manufactured as contemplated for general use, including without limitation, ordinary industrial use, general office use, personal use, and household use, but are not designed, developed and manufactured as contemplated (1) for use accompanying fatal risks or dangers that, unless extremely high safety is secured, could have a serious effect to the public, and could lead directly to death, personal injury, severe physical damage or other loss (i.e., nuclear reaction control in nuclear facility, aircraft flight control, air traffic control, mass transport control, medical life support system, missile launch control in weapon system), or (2) for use requiring extremely high reliability (i.e., submersible repeater and artificial satellite).

Please note that FUJITSU MICROELECTRONICS will not be liable against you and/or any third party for any claims or damages arising in connection with above-mentioned uses of the products.

Any semiconductor devices have an inherent chance of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

Exportation/release of any products described in this document may require necessary procedures in accordance with the regulations of the Foreign Exchange and Foreign Trade Control Law of Japan and/or US export control laws.

The company names and brand names herein are the trademarks or registered trademarks of their respective owners.
