

DESCRIPTION

The AMC317 series is a 3-terminal adjustable regulator featuring output current of typical 1.2A over a wide output range from 1.2V to 20V. Only two external resistors are required to set the output voltage. This feature provides better line and load regulation than fixed regulators.

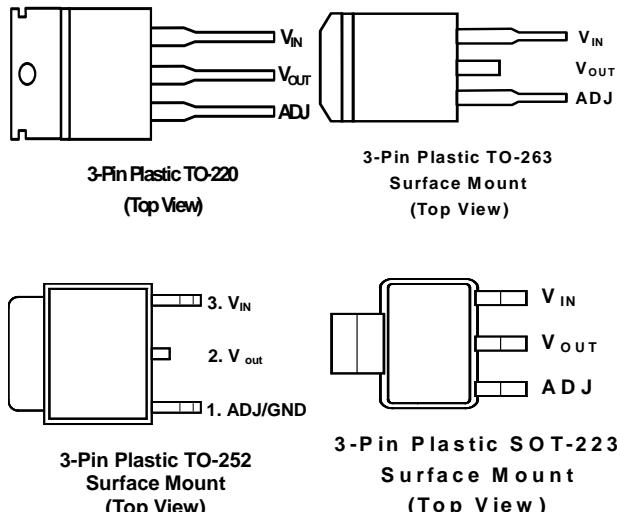

Also, the AMC317 series offers full overload protection, current limit, and thermal protection features. In most applications, no capacitor is required for the AMC317. However, if the device is located far from the input filter capacitor, then an input bypass will be required. Also, in order to improve the transient response, an output capacitor is recommended.

FEATURES

- Output current capability of 1.2A
- Wide output voltage range – adjustable from 1.2V to 20V
- Ripple rejection typically 80 dB
- Typically 0.1% load regulation
- Built-in over current, over temperature and overload protection.
- Internal thermal overload protection
- Available in 3-Lead TO-220, and surface mount 3-Lead TO-263.
- Identical pin assignment to earlier LM317 series.

APPLICATIONS

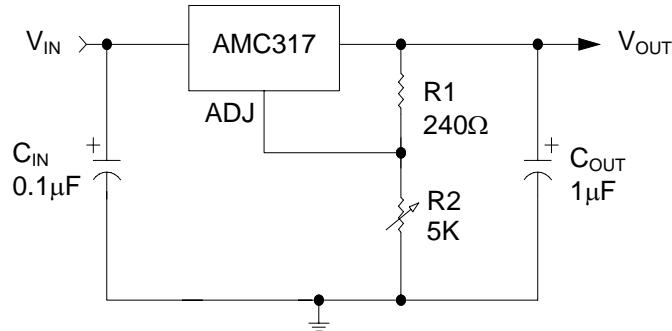

- Voltage Regulators
- Power Supplies
- Current Regulators
- Switching Regulators
- Current Limiter
- Constant Current Battery Charger
- Current Limited Charger

0 to 70	AMC317T		AMC317ST		AMC317SJ		AMC317SK	
0 to 70	AMC317TF (Lead Free)		AMC317STF (Lead Free)		AMC317SJF (Lead Free)		AMC317SKF (Lead Free)	

Note: 1.All surface-mount packages are available in Tape & Reel. Append the letter "T" to part number (i.e. AMC317STT).

2.The letter "F" is marked for Lead Free process.

TYPICAL APPLICATION

Note 1: C_{IN} is required if the regulator is far from the filter capacitor.
 Note 2: C_{OUT} is recommended to improve the transient response.

Note 3: $V_{OUT} = 1.25V \left(1 + \frac{R_2}{R_1} \right) + I_{ADJ}(R_2)$

ABSOLUTE MAXIMUM RATINGS (Note 1)

Input-Output Differential Voltage V_D 20V
 Operating Junction temperature

Plastic (T, ST Package) 150°C
 Storage Temperature Range -65°C to 150°C
 Lead temperature (Soldering, 10 seconds) 300°C

Note 1: Exceeding these ratings could cause damage to the device. All voltages are with respect to Ground. Currents are positive into, negative out of the specified terminal.

THERMAL DATA
T, ST PACKAGE:

Thermal Resistance-Junction to Tab, θ_{JT}	3.0°C /W
Thermal Resistance-Junction to Ambient, θ_{JA}	45°C /W
Junction Temperature Calculation: $T_J = T_A + (P_D \times \theta_{JA})$.	
The θ_{JA} numbers are guidelines for the thermal performance of the device/pc-board system.	
All of the above assume no ambient airflow.	

Maximum Power Calculation:

$$P_{D(MAX)} = \frac{T_{J(MAX)} - T_{A(MAX)}}{\theta_{JA}}$$

T_J (°C): Maximum recommended junction temperature

T_A (°C): Ambient temperature of the application

θ_{JA} (°C/W): Junction-to-junction temperature thermal resistance of the package, and other heat dissipating materials.

The maximum power dissipation for a single-output regulator is :

$$P_{D(MAX)} = [(V_{IN(MAX)} - V_{OUT(NOM)})] \times I_{OUT(NOM)} + V_{IN(MAX)} \times I_Q$$

Where: $V_{OUT(NOM)}$ = the nominal output voltage

$I_{OUT(NOM)}$ = the nominal output current, and

I_Q = the quiescent current the regulator consumes at $I_{OUT(MAX)}$

$V_{IN(MAX)}$ = the maximum input voltage

Then $\theta_{JA} = (150^\circ\text{C} - T_A)/P_D$
