### **General Description**

The PI322MC-A4 is a CIS module. It is a contact image sensor, using MOS image sensor technology for high-speed performance and high sensitivity. The PI322MC-A4 is suitable for scanning A4 size (216 mm) documents with 11.8 dots per millimeter resolution. Applications includes fax machines, game systems, variety of mark readers, and other automation equipment requiring document scanners.

### **Functional Description**

The PI322MC-A4 imaging array consists of 27 sensors, PI3021 produced by Peripheral Imaging Corp, that are cascaded to provide 2592 photo-detectors with their associated multiplex switches, and a digital shift register that controls its sequential readout. Mounted in the module is one-to-one graded indexed micro lens array that focuses the scanned documents to image onto its sensing plane. The on-board amplifier processes the video

signal to produce a sequential stream of video at the video output pin of the PI322MC-A4 module.

Illumination is by means of an integrated LED light source. All components are housed in a small plastic housing which has a cover glass which acts as the focal point for the object being scanned and protects the imaging array, micro lens assembly, and LED light source from dust. I/O to the module is the 10-pin connector located on one end of the module. The cross section of the PI322MC-A4 is shown in Figure 1 and the block diagram in Figure 2.

Definition:

(1) Tint: Line scanning rate or integration time. Tint is determined by the interval of two SP, start pulses. The minimum integration time of 500µs is available at 5.2 MHz pixel rate, but it will require optional light sources.

(2) f: main clock frequency,

(3)  $V_{pavg} = \sum V_p(n)/2592$

(4)  $U_p = [(V_{pmax} - V_p) / V_p] \times 100\%$  or  $[(V_p - V_{pmin}) / V_p] \times 100\%$

(5)  $U_{adj} = \text{MAX}[ | (V_p(n) - V_p(n+1)) | / V_p(n) ] \times 100\%$

Uadj is the nonuniformity percentage pixel to pixel

(6)  $U_d = V_{dmax} - V_{dmin}$

Vdmin is the minimum output on a black document(O.D.=0.8)

Vdmax: maximum output voltage of black document (O.D.= 0.8)

(7)  $MTF = [(V_{max} - V_{min}) / (V_{max} + V_{min})] \times 100 [\%]$

Vmax: maximum output voltage at 75 lp/in

Vmin: minimum output voltage at 75 lp/in

(8) O.D. = Optical Density

(9) lp / in: line pairs per inch
