

To all our customers

---

**Regarding the change of names mentioned in the document, such as Mitsubishi Electric and Mitsubishi XX, to Renesas Technology Corp.**

---

The semiconductor operations of Hitachi and Mitsubishi Electric were transferred to Renesas Technology Corporation on April 1st 2003. These operations include microcomputer, logic, analog and discrete devices, and memory chips other than DRAMs (flash memory, SRAMs etc.) Accordingly, although Mitsubishi Electric, Mitsubishi Electric Corporation, Mitsubishi Semiconductors, and other Mitsubishi brand names are mentioned in the document, these names have in fact all been changed to Renesas Technology Corp. Thank you for your understanding. Except for our corporate trademark, logo and corporate statement, no changes whatsoever have been made to the contents of the document, and these changes do not constitute any alteration to the contents of the document itself.

Note : Mitsubishi Electric will continue the business operations of high frequency & optical devices and power devices.

# M37702M2LXXXGP, M37702S1LGP M37702M2LXXXHP, M37702S1LHP

SINGLE-CHIP 16-BIT CMOS MICROCOMPUTER

## DESCRIPTION

The M37702M2LXXXGP is a single-chip 16-bit microcomputer designed with high-performance CMOS silicon gate technology. This is housed in a small 80-pin plastic molded QFP. This single-chip microcomputer has a large 16 M bytes address space, three instruction queue buffers, and two data buffers for high-speed instruction execution. The CPU is a 16-bit parallel processor that can also be switched to perform 8-bit parallel processing. This microcomputer is suitable for communication, office, business and industrial equipment controller that require high-speed processing of large data.

The strong points of the M37702M2LXXXGP, M37702S1LGP, M37702M2LXXXHP and M37702S1LHP are the low supply voltage and small package.

The differences between M37702M2LXXXGP, M37702S1LGP, M37702M2LXXXHP and M37702S1LHP are the ROM size and the package as shown below. Therefore, the following descriptions will be for the M37702M2LXXXGP unless otherwise noted.

Type name	ROM size	Package
M37702M2LXXXGP	16 K bytes	80-pin plastic molded QFP (80P6S-A)
M37702S1LGP	External	80-pin plastic molded QFP (80P6S-A)
M37702M2LXXXHP	16 K bytes	80-pin plastic molded fine-pitch QFP (80P6D-A)
M37702S1LHP	External	80-pin plastic molded fine-pitch QFP (80P6D-A)

## FEATURES

- Number of basic instructions ..... 103
- Memory size      ROM ..... 16 K bytes
- RAM ..... 512 bytes
- Instruction execution time  
The fastest instruction at 8 MHz frequency ..... 500 ns
- Single low supply voltage ..... 2.7 – 5.5 V
- Low power dissipation  
(At 3 V supply voltage, 8 MHz frequency) ..... 12 mW (Typ.)  
(At 5 V supply voltage, 8 MHz frequency) ..... 30 mW (Typ.)
- Wide operating temperature range ..... –40 – 80°C
- Interrupts ..... 19 types 7 levels
- Multiple function 16-bit timer ..... 5 + 3
- UART (may also be synchronous) ..... 2
- 8-bit A-D converter ..... 8-channel inputs
- 12-bit watchdog timer
- Programmable input/output  
(ports P0, P1, P2, P3, P4, P5, P6, P7, P8) ..... 68
- Small package  
M37702M2LXXXGP, M37702S1LGP ..... 80-pin QFP (0.65 mm lead pitch)  
M37702M2LXXXHP, M37702S1LHP ..... 80-pin fine-pitch QFP (0.5 mm lead pitch)

## APPLICATION

Control devices for communication equipment such as cellular radio telephones, cordless telephones, and radio communications  
Control devices for office equipment such as copiers, printers, typewriters, facsimiles, word processors, and personal computers  
Control devices for industrial equipments such as ME, NC, and measuring instruments

## NOTE

Refer to "Chapter 5 PRECAUTIONS" when using this microcomputer.

SINGLE-CHIP 16-BIT CMOS MICROCOMPUTER

**FUNCTIONS OF M37702M2LXXXGP**

Parameter		Functions
Number of basic instructions		103
Instruction execution time		500 ns (the fastest instruction at external clock 8 MHz frequency)
Memory size	ROM	16 K bytes
	RAM	512 bytes
Input/Output ports	P0 – P2, P4 – P8	8-bit × 8
	P3	4-bit × 1
Multi-function timers	TA0, TA1, TA2, TA3, TA4	16-bit × 5
	TB0, TB1, TB2	16-bit × 3
Serial I/O		(UART or clock synchronous serial I/O) × 2
A-D converter		8-bit × 1 (8 channels)
Watchdog timer		12-bit × 1
Interrupts		3 external types, 16 internal types (Each interrupt can be set the priority levels to 0 – 7.)
Clock generating circuit		Built-in (externally connected to a ceramic resonator or quartz crystal resonator)
Supply voltage		2.7 – 5.5 V
Power dissipation		12 mW (at 3 V supply voltage, external clock 8 MHz frequency) 30 mW (at 5 V supply voltage, external clock 8 MHz frequency)
Input/Output characteristic	Input/Output voltage	5 V
	Output current	5 mA
Memory expansion		Maximum 16 M bytes
Operating temperature range		-40 – 85°C
Device structure		CMOS high-performance silicon gate process
Package	M37702M2LXXXGP, M37702S1LGP	80-pin plastic molded QFP (80P6S-A: 0.65 mm lead pitch)
	M37702M2LXXXHP, M37702S1LHP	80-pin plastic molded fine-pitch QFP (80P6D-A: 0.5 mm lead pitch)

**PIN DESCRIPTION**

Pin	Name	Input/Output	Functions
Vcc, Vss	Power supply		Supply 2.7 – 5.5 V to Vcc and 0 V to Vss.
CNVss	CNVss input	Input	This pin controls the processor mode. Connect to Vss for single-chip mode, and to Vcc for external ROM types.
RESET	Reset input	Input	To enter the reset state, this pin must be kept at a "L" condition which should be maintained for the required time.
XIN	Clock input	Input	These are I/O pins of internal clock generating circuit. Connect a ceramic or quartz crystal resonator between XIN and XOUT. When an external clock is used, the clock source should be connected to the XIN pin and the XOUT pin should be left open.
XOUT	Clock output	Output	
$\bar{E}$	Enable output	Output	Data or instruction read and data write are performed when output from this pin is "L".
BYTE	Bus width selection input	Input	In memory expansion mode or microprocessor mode, this pin determines whether the external data bus is 8-bit width or 16-bit width. The width is 16 bits when "L" signal inputs and 8 bits when "H" signal inputs.
AVcc, AVss	Analog supply input		Power supply for the A-D converter. Connect AVcc to Vcc and AVss to Vss externally.
VREF	Reference voltage input	Input	This is reference voltage input pin for the A-D converter.
P00 – P07	I/O port P0	I/O	In single-chip mode, port P0 becomes an 8-bit I/O port. An I/O direction register is available so that each pin can be programmed for input or output. These ports are in input mode when reset. Address (A7 – A0) is output in memory expansion mode or microprocessor mode.
P10 – P17	I/O port P1	I/O	In single-chip mode, these pins have the same functions as port P0. When the BYTE pin is set to "L" in memory expansion mode or microprocessor mode and external data bus is 16-bit width, high-order data (D15 – D8) is input or output when E output is "L" and an address (A15 – A8) is output when E output is "H". If the BYTE pin is "H" that is an external data bus is 8-bit width, only address (A15 – A8) is output.
P20 – P27	I/O port P2	I/O	In single-chip mode, these pins have the same functions as port P0. In memory expansion mode or microprocessor mode low-order data (D7 – D0) is input or output when E output is "L" and an address (A23 – A16) is output when E output is "H".
P30 – P33	I/O port P3	I/O	In single-chip mode, these pins have the same functions as port P0. In memory expansion mode or microprocessor mode, R/W, BHE, ALE and HLDA signals are output.
P40 – P47	I/O port P4	I/O	In single-chip mode, these pins have the same functions as port P0. In memory expansion mode or microprocessor mode, P40 and P41 become HOLD and RDY input pin respectively. Functions of other pins are the same as in single-chip mode. In single-chip mode or memory expansion mode, port P42 can be programmed for $\phi_1$ output pin divided the clock to XIN pin by 2. In microprocessor mode, P42 always has the function as $\phi_1$ output pin.
P50 – P57	I/O port P5	I/O	In addition to having the same functions as port P0 in single-chip mode, these pins also function as I/O pins for timer A0, timer A1, timer A2 and timer A3.
P60 – P67	I/O port P6	I/O	In addition to having the same functions as port P0 in single-chip mode, these pins also function as I/O pins for timer A4, external interrupt input INT0, INT1 and INT2 pins, and input pins for timer B0, timer B1 and timer B2.
P70 – P77	I/O port P7	I/O	In addition to having the same functions as port P0 in single-chip mode, these pins also function as analog input AN0 – AN7 input pins. P77 also has an A-D conversion trigger input function.
P80 – P87	I/O port P8	I/O	In addition to having the same functions as port P0 in single-chip mode, these pins also function as RxD, TxD, CLK, CTS/RTS pins for UART 0 and UART 1.

# M37702M2LXXXGP, M37702S1LGP

## M37702M2LXXXHP, M37702S1LHP

SINGLE-CHIP 16-BIT CMOS MICROCOMPUTER

### BASIC FUNCTION BLOCKS

The M37702M2LXXXGP has the same functions as the M37702M2BXXXFP except for the reset circuit. Refer to the section on the M37702M2BXXXFP.

### RESET CIRCUIT

Reset occurs when the **RESET** pin is returned to "H" level after holding it at "L" level when the power voltage is at 2.7 – 5.5 V. Program execution starts at the address formed by setting the address pins A23 – A16 to 0016, A15 – A8 to the contents of address FFFF16, and A7 – A0 to the contents of address FFFE16.

Figure 1 shows the status of the internal registers when a reset occurs.

Figure 2 shows an example of a reset circuit. The reset input voltage must be held 0.55 V or lower when the power voltage reaches 2.7 V.
