PMIS4 / PMIR4 				●		IP67	• Magnetic incremental encoder • Resolution up to 184,320 pulses per revolution • Resistant against shock, vibration, humidity and many liquids
PMIS4 / PMIR5 				●		IP67	• Magnetic incremental encoder • Resolution up to 327,680 pulses per revolution • Resistant against shock, vibration, humidity and many liquids

The Company and the Products

ASM is a leading company in the development and production of linear and angular position sensors. ASM sensors are used in industrial and commercial applications, where angle, inclination, displacement or position measurements are used to automate, test or monitor processes.

Innovative Technologies that Solve Your Measuring Requirements

Our product range consists of various technologies to measure linear and rotative positions. With over 25 years of experience in the position sensor market, ASM offers innovative solutions for the most demanding applications.

ASM Products Represent Quality and Reliability

The quality and precision of our products ensures consistent productivity. Our continuous research and development in our laboratories as well as our DIN EN 9001:2000 certified quality management system guarantees these high standards.

ASM – Global Supplier of Position Sensors

ASM products are sold world-wide through sales offices, subsidiaries and a network of 50 distributors. With this global presence we ensure being close to our customers and provide quick product availability wherever ASM sensors are needed.

The product range

- **POSIROT®** Magnetic Angle Sensors
- **POSITILT®** Magnetic Inclination Sensors
- **POSICHRON®** Magnetostrictive Position Sensors
- **POSIMAG®** Magnetic Scale Position Sensors
- **WS®** Cable Actuated Position Sensors
- **PRODIS®** Digital Process Displays

PRAS/PRDS Series (POSIROT®)

The angle sensors of the **PRAS/PRDS series** are based on a contact-free and absolute measurement principle. The position sensing element is a permanent magnet.

Depending on the permanent magnet type, a tolerance in the air gap and axial offset is allowable within certain limits. The detected magnetic field vectors are transformed by an internal circuit board into standard 4-20 mA, 0.5-10 V and SSI output signals.

PMIS Series (POSIROT®)

The incremental encoder of the **PMIS series** consists of an XMR sensor head and a magnet ring as a magnetic scale. The circumference of the magnet ring contains a series of evenly spaced magnetic north and south poles.

The angular position is determined contact-free and wear-free by the sampling of the sinusoid magnetic field above the surface of the magnet ring by the XMR-sensor head. The air gap between the sensor head and the magnetic ring can be up to 2 mm for a ring with a 5 mm period. The sensor head generates 90° shifted sine/cosine signals, through the integrated signal interpolation circuit, these signals are combined with the reference mark signal and transformed without a time delay into a square-wave output.

PTAS Series (POSITILT®)

The **PTAS series** uses a pendulum with an internal position magnet to provide the inclination angle. The cavity surrounding the pendulum is filled with a specific fluid that can be varied depending upon the amount of motion damping is required.

The established PRAS2 or PRDS2 angle sensor is fitted into the PTAS2 housing. The stainless steel housing is thoroughly sealed and is rated up to IP69K, which makes it suitable for use in extreme environments found on cranes, off-highway construction equipment, ships and off-shore applications.

External magnetic fields due to power cables, magnetized materials or the earth's magnetic field do not influence the accuracy of the inclinometer. The PTAS series is completely encapsulated in a magnetically shielded housing and is immune against magnetic fields as far as possible.

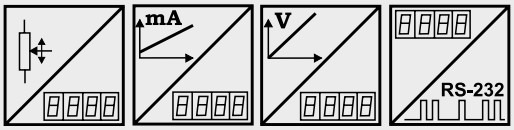
PRODIS®
PD-ADC
Digital process meter for analog sensors

- **For POSIROT® and POSITILT® position sensors with analog outputs:**
  Voltage 0 ... 10 V; 0.5 ... 10V; 0.5 ... 4.5 V
  Current 4 ... 20 mA
  Voltage divider
- **Integrated sensor supply (24 V DC)**
- **6-digit LED display**
- **RS-232 interface**
- **Optional 4 comparator outputs**
- **Easy programming**



Description

PRODIS-ADC is designed for use with analog position sensors to display angles and displacements. A high resolution A/D converter processes signals from sensors with voltage output 0 ... 10 V, current output 0/4 ... 20 mA or voltage divider (potentiometer).
The meter is programmable to display values within preset start/end range or values in units as inches, mm or degrees. A tare function or programming lock can be activated with two control terminals.
Sensor excitation is supplied by the meter. With four membrane keys all parameters can be programmed for the special applications. Optional comparator functions with 4 NPN open-collector outputs are available, additional 2 of them have relay output.

Specification

Display		6-digit, 7-segment LED, height 14 mm, decimal point programmable
Counting rate		1 ... 25/s programmable
Measurement accuracy		±0.05 % f.s.
Excitation voltage/current		24 V DC ±10%/150 mA, residual ripple 1%$_{ss}$; 85-250 V AC, 50-60 Hz/180 mA max.
Sensor excitation		24 V DC/300 mA
Input		Two channels, each for: Voltage 0...10V; 0.5 ... 10V; 0.5 ... 4.5 V; max. 24V Current 0/4...20 mA, load 100 Ω, I_{max}<30 mA Voltage divider R_{min}=500 Ω, 0 ... 5 V One input or the difference between both inputs can be chosen by programming
Control input		2 control inputs 24 V, active low
Comparator outputs (option)	Relay NPN	250 V AC/5 A, 30 V DC/5 A 24 V max./50 mA to GND
Connection		Terminal strip 12 pole, excitation 3 pole
Temperature coefficient		±20 x 10^{-6} / °C [±36 x 10^{-6} / °F]
Operating temperature / storage temperature		-10...+40 °C [14...+104 °F] / -20...+85 °C [-4...+185 °F]

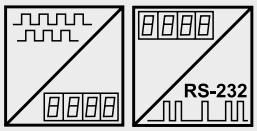
PD-INC
Digital process meter for incremental sensors

- **For POSIROT® position sensors with incremental outputs**
- **Integrated sensor supply**
- **Counting rate up to 250 kHz (<1 MHz edge frequency)**
- **6-digit LED display**
- **RS-232 interface**
- **Optional 4 comparator outputs**
- **Easy programming**



Description

PRODIS-INC is designed for use with incremental position sensors to display angles. The fast counter processes 90° phase shifted A,B signals (quadrature signals) for direction and counting information. Sensor excitation is supplied from the meter. With four membrane keys all parameters can be programmed for the special application. An zero signal and a reference signal can be used for calibration of the measurement system. Optional comparator functions with 4 NPN open-collector outputs are available, additional 2 of them have relay output.

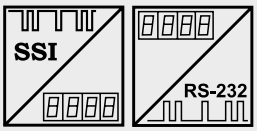
- **For POSIROT® position sensors with SSI output**
- **Integrated sensor supply**
- **6-digit LED display**
- **RS-232 interface**
- **Optional 4 comparator outputs**
- **Easy programming**



PRODIS-SSI is designed for use with SSI position sensors to display angle and displacement. Via the CLOCK lines, a sequence of pulses will be transmitted, the input DATA lines will read the sensor´s serial bit sequence. The meter is programmable to display values within preset start/end range or values in units as inches, mm or degrees. A tare function or programming lock can be activated with two control terminals.
Sensor excitation is supplied by the meter. With four membrane keys, all parameters can be programmed for the special applications. Optional comparator functions with 4 NPN open-collector outputs are available, additional 2 of them have relay output.
