The buzzer shall be measured after applying vibion amplitde 1.5 mm wit 10 to the 3 perpendicular directions for 2 hours. The part will be dropped from a height of 75 cm onto a 40 mm thick wooden board 3 times in 3 axes ( $\mathrm{X}, \mathrm{Y}, \mathrm{Z}$ ) for a total of 9 drops.

## Evaluation Standard

90\% min. of the lead terminals will be wet with solder. (Except the edge of the terminal)

No interference in operation.
No damage or cutting off.

The value of oscillation frequency/current consumption should be $\pm 10 \%$ of the initial measurements. The SPL should be within $\pm 10 \mathrm{~dB}$ compared with the initial measurement.
