

# CX3SM CRYSTAL

800 kHz to 1.35 MHz

Low Profile Miniature Surface Mount Quartz Crystal

#### **DESCRIPTION**

The CX3SM quartz crystals are leadless devices designed for surface mounting on printed circuit boards or hybrid substrates. They are hermetically sealed in a rugged, miniature ceramic packages and are designed specifically for manufacturing temperatures up to 260°C.

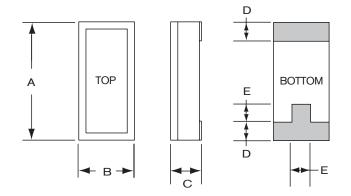

# actual size

# PACKAGE DIMENSIONS

## **FEATURES**

- Extensional mode
- Ideal for use with microprocessors
- Designed for low power applications
- Compatible with hybrid or PC board packaging
- Low aging
- Full military testing available
- Ideal for battery operated applications
- Designed and manufactured in the USA

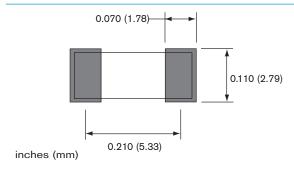

## **EQUIVALENT CIRCUIT**

	TYP.		MAX.		
DIM	inches	mm	inches	mm	
А	0.263	6.68	0.270	6.86	
В	0.097	2.46	0.104	2.64	
С	-	-	see below		
D	0.052	1.32	0.058	1.47	
E	0.030	0.76	0.035	0.89	

DIM "C""	GLASS LID		CERAMIC LID

## SUGGESTED LAND PATTERN

10123 - Rev B

#### **SPECIFICATIONS**

Specifications are typical at 25°C unless otherwise noted. Specifications are subject to change without notice.

Frequency Range 800 kHz - 1.35 MHz

Functional Mode Extensional

Calibration Tolerance\* ± 500 ppm (0.05%)

± 1000 ppm (0.1%)

± 10000 ppm (1.0%)

Load Capacitance 7 pF

Motional Resistance (R<sub>1</sub>)  $5 \text{ k}\Omega \text{ MAX}$ 

Motional Capacitance (C<sub>1</sub>) 1.2 fF Quality Factor (Q) 150 k

Shunt Capacitance  $(C_0)$ 1.0 pF

3 µW MAX. Drive Level

Turning Point (T<sub>0</sub>)\*\* 35°C

Temperature Coefficient (k) -0.035 ppm/°C<sup>2</sup>

Note: Frequency f at temperature T is related to frequency f<sub>0</sub>

Note: Frequency i at term, at turning point temperature  $T_0$  by:  $\frac{f-f_0}{f_0} = k(T-T_0)^2$ 

5 ppm MAX Aging, first year

Shock, survival 1000 g peak, 0.3 ms, 1/2 sine

10 g RMS, 20-1,000 Hz random Vibration, survival Operating Temp. Range

-10°C to +70°C (Commercial) -40°C to +85°C (Industrial)

 $-55^{\circ}$ C to  $+125^{\circ}$ C (Military)

-55°C to +125°C Storage Temp. Range 260°C for 20 sec. Max Process Temperature

# PACKAGING OPTIONS

CX3SM - Tray Pack

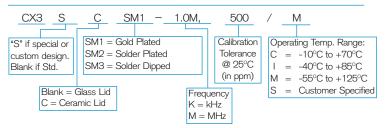

- Tape and Reel

(Reference tape and reel data sheet 10109)

## **TERMINATIONS**

Designation **Termination** SM<sub>1</sub> Gold Plated SM<sub>2</sub> Solder Plated SM3 Solder Dipped

## HOW TO ORDER CX3SM CRYSTALS

## TYPICAL APPLICATION FOR A PIERCE OSCILLATOR

The low profile CX miniature surface mount crystal is ideal for small, high density, battery operated portable products. The CX crystal designed in a Pierce oscillator (single inverter) circuit provides very low current consumption and high stability. A conventional CMOS Pierce oscillator circuit is shown below. The crystal is effectively inductive and in a PI-network circuit with C<sub>D</sub> and C<sub>G</sub> provides the additional phase shift necessary to sustain oscillation. The oscillation frequency  $(f_0)$  is 15 to 150 ppm above the crystal's series resonant frequency (f<sub>s</sub>).

## **Drive Level**

RA is used to limit the crystal's drive level by forming a voltage divider between R<sub>A</sub> and C<sub>D</sub>. R<sub>A</sub> also stabilizes the oscillator against changes in the amplifiers output resistance (R<sub>0</sub>). R<sub>A</sub> should be increased for higher voltage operation.

## **Load Capacitance**

The CX crystal calibration tolerance is influenced by the effective circuit capacitances, specified as the load capacitance (C<sub>L</sub>). C<sub>L</sub> is approximately equal to:

$$C_{L} = \frac{C_{D} \times C_{G}}{C_{D} + C_{G}} + C_{S}$$
 (1)

NOTE: C<sub>D</sub> and C<sub>G</sub> include stray layout to ground and C<sub>S</sub> is the stray shunt capacitance between the crystal terminal. In practice, the effective value of C<sub>L</sub> will be less than that calculated from  $C_D$ ,  $C_G$  and  $C_S$  values because of the effect of the amplifier output resistance. C<sub>S</sub> should be minimized.

The oscillation frequency  $(f_0)$  is approximately equal to:

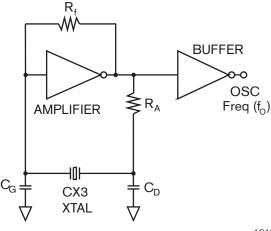

$$f_0 = f_S \left[ 1 + \frac{C_1}{2(C_0 + C_1)} \right]$$
 (2)

 $f_S$  = Series resonant frequency of the crystal

C<sub>1</sub> = Motional Capacitance

Co = Shunt Capacitance
