### Description

The CPC1963 is an AC Solid State Switch using optical coupling with dual power SCR outputs to produce an alternative to optocoupler and Triac circuits. The CPC1963 switches are robust enough to provide a blocking voltage of up to  $600V_P$ . In addition, tightly controlled zero cross circuitry ensures switching of AC loads without the generation of transients. The input and output circuits are optically coupled to provide  $3750V_{rms}$  of isolation and noise immunity between control and load circuits. As a result, the CPC1963 is well suited for industrial environments where electromagnetic interference could disrupt the operation of electromechanical relays.
