

0.9 mm Pitch Vertical Mating Board-to-Wire Connectors

DF24 Series

■ Features

1. Space saving

Small contact pitch (0.9 mm) together with vertical mating direction allows high density mounting of the board components.

2. Low profile

Two-level contact location and horizontal wire exits allow a low profile of 3.8 mm, when fully.

3. Reliable mating/un-mating

Complete vertical mating, with both sides self-aligned, is confirmed with tactile "click" sensation.

4. High contact reliability

2-point socket contact, with a long wipe (0.55 mm) assures highly reliable electrical and mechanical connection.

5. Prevention of solder wicking

Despite its low-profile, solder wicking is prevented by the nickel barrier and solder collection areas.

6. Self-alignment and side-pull protection

The walls of the double row socket assembly will self-align during the mating and protect header and socket assemblies from an accidental side-pull on the wires.

7. Simplified un-mating

A pull strap for double row socket version may be selected for easier un-mating.

8. Contact deformation protection

Flat contact blades on the headers are supported by the insulator's walls, protecting them from deformation during handling.

9. Board placement with automatic equipment

Supplied on reels containing 1,000 assemblies.

10. RoHS compliant

All components and materials comply with the requirements of the EU Directive 2002/95/EC.

■ Applications

Notebook computers, miniature office automation devices, miniature consumer devices, cameras, recording devices and other devices requiring vertical mating reliable connectors.

Space-saving

Low-profile

Long contact wipe

Two-point socket contact

Self-alignment and side-pull protection

Contact deformation protection

DF24 Series 0.9 mm Pitch Vertical Mating Board-to-Wire Connectors

Product Specifications

Rating	Current rating (Note 1)	Wire size	AWG28 :1A AWG30 :0.5A AWG32~36 :0.3A	Operating temperature range Operating humidity range	-35°C to +85°C (Note 2) Relative humidity 20% to 80%
	Voltage rating		80V AC	Storage temperature range Storage humidity range	-10°C to +60°C (Note 3) Relative humidity 40% to 70% (Note 3)

Item	Specification	Conditions
1. Insulation resistance	500 M ohms min.	100V DC
2. Withstanding voltage	No flashover or insulation breakdown.	250V AC/one minute
3. Contact resistance	30 mΩ max.	1 mA, 20 mV max.
4. Insertion-Extraction force (per contact)	0.12N min., 2N max.	Measured with a steel pin of 0.15mm thickness
5. Vibration	No electrical discontinuity of 1μs or more.	Frequency: 10 to 55 Hz, single amplitude of 0.75mm, 2 hours, 3 axis
6. Humidity	Contact resistance: 30 mΩ max. Insulation resistance: 250 MΩ min.	96 hours at temperature of 40±2°C and humidity of 90% to 95%.
7. Temperature cycle	Contact resistance: 30 mΩ max. Insulation resistance: 500 MΩ min.	Temperature: -55°C → +5°C to +35°C → +85°C → +5°C to +35°C Time: 30 → 2 to 3 → 30 → 2 to 3 (Minutes) 5 cycles
8. Durability (mating / un-mating)	Contact resistance: 30 mΩ max.	30 cycles
9. Resistance to soldering heat	No deformation of components affecting performance.	Reflow: At the recommended temperature profile Manual soldering: 350°C for 3 seconds

Note 1: Current rating for header is 1A.

Note 2: Includes temperature rise caused by current flow.

Note 3: The term "storage" refers to products stored for long period of time prior to mounting and use. Operating temperature range and humidity range covers non-conducting condition of installed connectors in storage, shipment or during transportation.

Note 4: Information contained in this catalog represents general requirements for this Series. Contact us for the drawings and specifications for a specific part number shown.

Materials and Finishes

Product	Component	Material	Finish	Remarks

Before attachment of the pull strap

Pull strap attached

DF24 Series 0.9 mm Pitch Vertical Mating Board-to-Wire Connectors

■ Pull Strap Attachment Procedure

- ① With the adhesive side of the pull strap facing upward, pass both ends of the strap through the elongated openings at both ends of the socket.

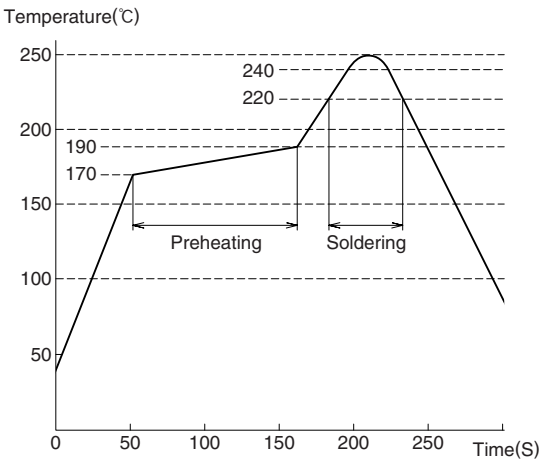

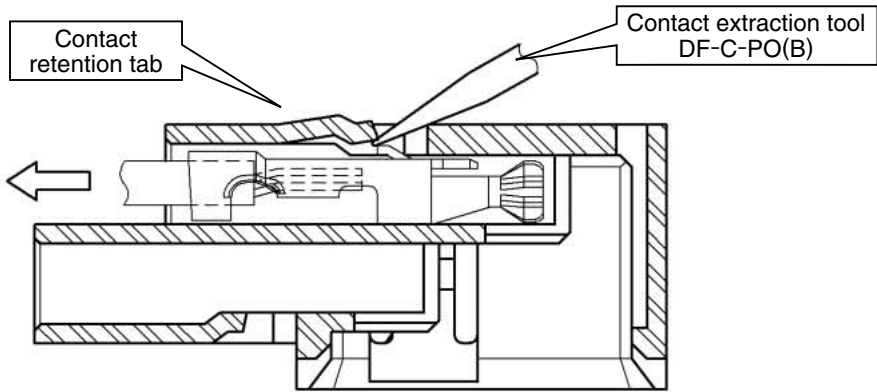

- ② Peel-off the protective paper on one side and place one end of the strap over exposed adhesive (as illustrated below), using the remaining paper side as the alignment guide.

- ③ Peel-off the remaining protective paper and place the other end of the strap over the adhesive, using the already attached end as the alignment guide.

Usage recommendations and Precautions

<p>1. Recommended temperature profile (Including Lead-free solder)</p>	 <div data-bbox="1036 287 1380 553" style="border: 1px solid black; padding: 5px;"> <p>Reflow conditions</p> <p>Preheating: 180±10°C 60~20sec.</p> <p>Soldering: 250°C max. 240°Cmin. 20sec. max. 220°Cmin. 60sec. max.</p> </div> <p>Note 1: Up to 2 cycles of Reflow soldering are possible under the same conditions, providing that there is a return to normal temperature between the first and second cycle. Note 2: The temperature profile indicates the board surface at the point of contacts with the connector terminals.</p>
<p>2. Recommended manual soldering</p>	<p>Manual soldering: 300±10°C for 3 seconds</p>
<p>3. Recommended screen thickness and opening area ratio (Pattern area ratio)</p>	<p>Thickness: 0.12mm Opening area ratio: 80%</p>
<p>4. Board warpage</p>	<p>Maximum of 0.03mm at the connector center, with both ends of the connector as reference points.</p>
<p>5. Cleaning conditions</p>	<p>Refer to "Nylon Connector Use Handbook".</p>
<p>6. Wire preparation and contact crimping</p>	<p>Refer to "Nylon Connector Use Handbook". The crimp contacts are of a very small form and because of this, crimping should be performed carefully based on the content of the Crimping Conditions Table and the Crimping Quality Standards Manual.</p>
<p>7. Precautions</p>	<p>■ Removal of the inserted socket contacts</p> <ul style="list-style-type: none"> * Using the socket contact extraction tool (DF-C-PO(B)) carefully lift the contact retention tab on the insulator housing, as shown on the Fig.1 and pull-out the wire. * Lift the tab ONLY enough to remove the contact. Exercise caution NOT to deflect too much. The tab should return to its original position after the contact is removed. The tab must be in its original position before inserting the new socket contact.  <p style="text-align: center;">Fig. 1. Contact Removal</p>

7. Precautions

■ Connector Mating/Un-mating

- * Hold the socket at both ends (as illustrated on Fig.2) when mating or un-mating. The mating/un-mating of the connectors must be within the indicated angle of 20° on both axis.

Fig. 2. Mating / Un-mating

■ Bundling of the Wires

- * To avoid wire damage or termination faults bundling of the wires should be at the distance of 20 mm min. from the socket (Fig. 3-1)
- * When bundling at the distance less than the recommended 20 mm, it is critical to avoid sharp bend radius (Fig. 3-2) or apply stretching or twisting forces (Fig. 3-3)

Fig. 3. Bundling requirements

- * Do not mate/un-mate connectors when not mounted on the board.
- * Do not use connector as the only support for the board.
- * Do not use flux compounds when hand soldering.
- * Slight color shade difference of the insulator bodies will not affect the form, fit or function of the connectors.
