Description

M/A-COM's AM55-0016 is a high dynamic range, switchable low noise amplifier in a low cost, MSOP 8-lead, surface mount, plastic package. The design utilizes a patented switching technique to provide a low insertion loss, high input IP_3 bypass state in parallel with the high gain, low noise state.

The LNA employs external input matching to obtain optimum noise figure performance and operating frequency flexibility. The AM55-0016 also features flexible biasing to control the current consumption vs. dynamic range trade-off. It's current can be controlled over a range of 10 mA to 30 mA with an external resistor.

Typical applications include receiver front ends in cellular band CDMA handsets. It is also useful as a switched gain block, buffer or driver in portable cellular systems.

The AM55-0016 is fabricated using a low-cost 0.5-micron gate length GaAs MESFET process. The process features full passivation for increased performance and reliability.

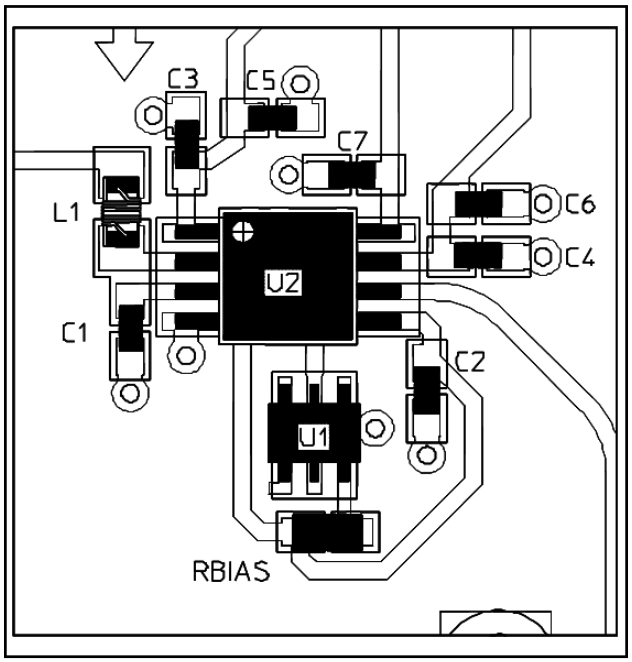
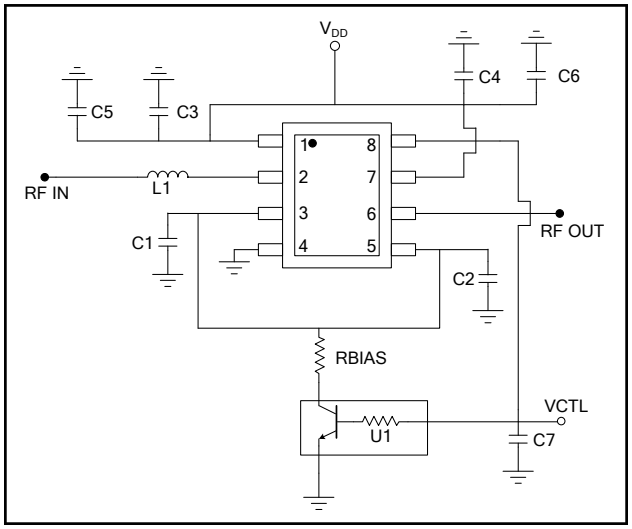
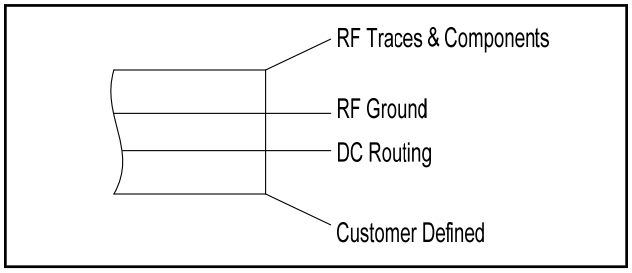
Recommended PCB Configuration



External Circuitry



Cross Section View



The PCB dielectric between RF traces and RF ground layers should be chosen to reduce RF discontinues between 50 Ω lines and package pins. M/A-COM recommends an FR-4 dielectric thickness of 0.008" (0.2 mm) yielding a 50 Ω line width of 0.015" (0.38 mm). The recommended metallization thickness is 1 ounce copper.

External Circuitry Parts List [5]

Part	Value	Purpose
C1, C2	1000 pF	Source Bypass
