HLMP-Q102/Q152/Q106/Q156

Subminiature High Performance TS AlGaAs Red LED Lamps

Data Sheet

Description

Flat Top Package

The HLMP-Pxxx Series flat top lamps use an untinted, non-diffused, truncated lens to provide a wide radiation pattern that is necessary for use in backlighting applications. The flat top lamps are also ideal for use as emitters in light pipe applications.

Dome Packages

The HLMP-Qxxx Series dome lamps, for use as indicators, use a tinted, diffused lens to provide a wide viewing angle with high on-off contrast ratio. High brightness lamps use an untinted, nondiffused lens to provide a high luminous intensity within a narrow radiation pattern.

Lead Configurations

All of these devices are made by encapsulating LED chips on axial lead frames to form molded epoxy subminiature lamp packages. A variety of package configuration options is available. These include special surface mount lead configurations, gull wing, yoke lead, or Z-bend. Right angle lead bends at 2.54 mm (0.100 inch) and 5.08 mm (0.200 inch) center spacing are available for through hole mounting. For more information refer to Standard SMT and Through Hole Lead Bend Options for Subminiature LED Lamps data sheet.

Technology

These subminiature solid state lamps utilize a highly optimized LED material technology, transparent substrate aluminum gallium arsenide (TS AlGaAs). This LED technology has a very high luminous efficiency, capable of producing high light output over a wide range of drive currents (500 μ A to 50 mA). The color is deep red at a dominant wavelength of 644 nm deep red. TS AlGaAs is a flip-chip LED technology, die attached to the anode lead and wire bonded to the cathode lead. Available viewing angles are 75°, 35°, and 15°.

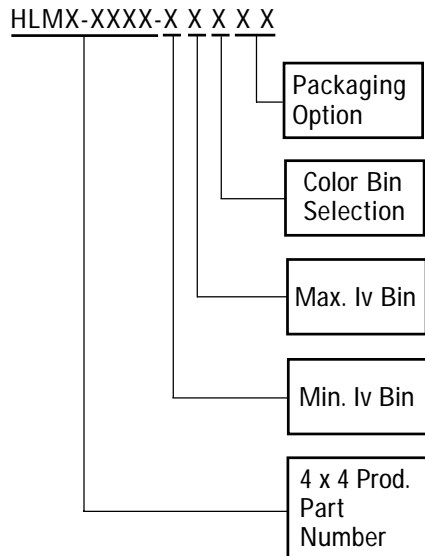

Features

- **Subminiature flat top package**
Ideal for backlighting and light piping applications
- **Subminiature dome package**
Diffused dome for wide viewing angle
Non-diffused dome for high brightness
- **Wide range of drive currents 500 μ A to 50 mA**
- **Ideal for space limited applications**
- **Axial leads**
- **Available with lead configurations for surface mount and through hole PC board mounting**

NOTES:

1. ALL DIMENSIONS ARE IN MILLIMETRES (INCHES).
2. PROTRUDING SUPPORT TAB IS CONNECTED TO ANODE LEAD.
3. LEAD POLARITY FOR THESE TS AlGaAs SUBMINIATURE LAMPS IS OPPOSITE TO THE LEAD POLARITY OF SUBMINIATURE LAMPS USING OTHER LED TECHNOLOGIES.

Parameters	Title
DC Forward Current ^[1]	50 mA
Peak Forward Current ^[2]	300 mA
Average Forward Current ^[2,3]	30 mA
Transient Forward Current (10 μs Pulse) ^[4]	500 mA
Power Dissipation	100 mW
Reverse Voltage	5 V
Junction Temperature	110°C
Operating Temperature	-55°C to +100°C
Storage Temperature	-55°C to +100°C
Lead Soldering Temperature [1.6 mm (0.063 in.) from body]	260°C for 5 seconds
Reflow Soldering Temperature	260°C for 20 seconds

Notes:

1. Derate linearly as shown in Figure 6.
2. Refer to Figure 7 to establish pulsed operating conditions.
3. Maximum I_{AVG} at f = 1 kHz, DF = 10%.
4. The transient peak current is the maximum non-recurring peak current the device can withstand without damaging the LED die and wire bonds. It is not recommended that the device be operated at peak currents above the Absolute Maximum Peak Forward Current.

Notes:

1. The luminous intensity, I_v, is measured at the mechanical axis of the lamp package. The actual peak of the spatial radiation pattern may not be aligned with this axis.
2. φ_v is the total luminous flux output as measured with an integrating sphere.
3. The dominant wavelength, λ_d, is derived from the CIE Chromaticity Diagram and represents the color of the device.
4. θ^{1/2} is the off-axis angle where the luminous intensity is 1/2 the peak intensity.
5. Radiant intensity, I_v, in watts/steradian, may be calculated from the equation I_v = I_v/η_v, where I_v is the luminous intensity in candelas and η_v is the luminous efficacy in lumens/watt.
