

CM1225

#### **Features**

- · Four channels of ESD protection
- Provides ESD protection to IEC61000-4-2 Level 4
  - ±8kV contact discharge
- Low channel input capacitance of 0.8pF (typically)
- Channel input capacitance matching (I/O to I/O) of 0.02pF (typically) is ideal for differential signals
- Minimal capacitance change for temperature and voltage
- Zener diode eliminates the need for external bypass capacitors
- Each I/O pin can withstand over 1000 ESD strikes\*
- Available in a RoHS compliant (lead-free) package

### **Applications**

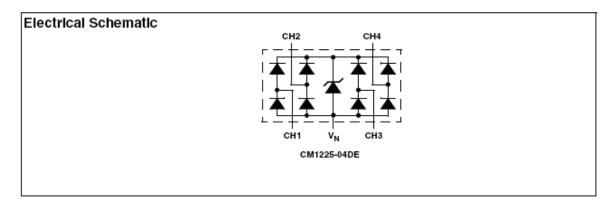

- HDMI ports, DVI ports in notebooks, set top boxes, digital TVs, and LCD displays
- · Display and MDDI ports
- Serial ATA ports in desktop PCs and hard disk drives
- PCI Express ports
- USB2.0 ports at 480Mbps in desktop PCs, notebooks and peripherals
- IEEE1394 FireWire ports at 400Mbps / 800Mbps
- General purpose high-speed data line ESD protection
- Protection of interface ports or IC pins which are exposed to high ESD levels

### **Product Description**

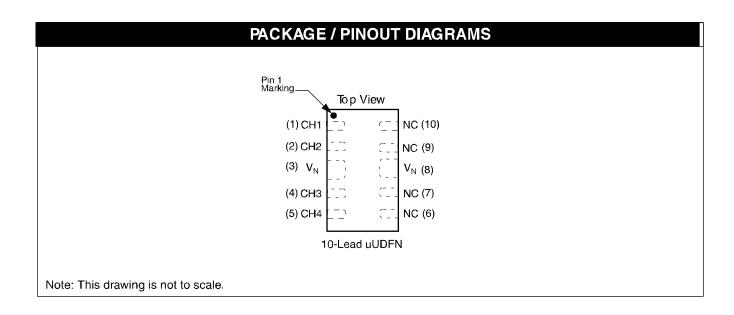

The CM1225 diode array has been designed to provide ESD protection for electronic components or subsystems requiring minimal capacitive loading. This device is ideal for protecting systems with high data and clock rates or for circuits requiring low capacitive loading. Each ESD channel consists of a pair of diodes in series which steer the positive or negative ESD current pulse to the ground pins ( $V_N$ ). A Zener diode is embedded between the positive terminal of the diode pair to the ground. This eliminates the need for an external bypass capacitor to absorb positive ESD strikes to ground. The CM1225 protects against ESD pulses up to  $\pm 8kV$  per the IEC 61000-4-2 standard.

The CM1225 is particularly well-suited for protecting systems using high-speed ports such as HDMI, DVI, display, MDDI, USB 2.0, Serial ATA, IEEE1394 (FireWire and i.LINK), corresponding ports in removable storage, digital camcorders, DVD-RW drives and other applications where extremely low loading capacitance with ESD protection are required in a small package footprint.

The CM1225 is available in a RoHS-compliant, uUDFN 10-pin package.

<sup>\*</sup>Standard test condition is IEC61000-4-2 level 4 test circuit with each pin subjected to ±8kV contact discharge for 1000 pulses. Discharges are timed at 1 second intervals and all 1000 strikes are completed in one continuous test run. The part is then subjected to standard production test to verify that all of the tested parameters are within spec after the 1000 strikes.

### **Pin Descriptions**

4-CHANNEL, 10-LEAD, uUDFN-10 PACKAGE					
Pin	Name	Туре	Description		
1	CH1	I/O	ESD Channel		
2	CH2	I/O	ESD Channel		
3	V <sub>N</sub>	GND	Ground		
4	СНЗ	I/O	ESD Channel		
5	CH4	I/O	ESD Channel		
6	NC		No Connect		
7	NC		No Connect		
8	V <sub>N</sub>	GND	Ground		
9	NC		No Connect		
10	NC		No Connect

### **Application Information**

#### **Design Considerations**

As a general rule, the CM1225 ESD protection array should be located as close as possible to the point of entry of expected electrostatic discharges. Use minimum PCB trace lengths to ground planes and between the signal input and the ESD devices.

#### **Additional Information**

See also California Micro Devices Application Note AP209, "Design Considerations for ESD Protection," in the Applications section at www.calmicro.com.
