Heavy-duty connectors

A wide range of system components featuring countless possible combinations, rounded off by a range of accessories to suit all applications:

- four fastening systems
- easy-to-use latch
- larger cable space
- knock-resistant coating
- Quality to ISO 9001

**3 – 216 pole connectors,
standard and corrosion-proof options**

The cost-effective customer-specific solution is called ConCept.

This new modular system consists of a number of modules that differ in pole number and electrical ratings.

The modules can be combined in any desired combination to create a complete connector.

Ingress protection acc. to EN 60 529/DIN 0470

Degrees of protection against solid foreign objects (1st characteristic numeral)		Degrees of protection against ingress of water (2nd characteristic numeral)	
Digit		Digit	
0	No Protection	0	No Protection
1	Protected against foreign objects of 50mm $\varnothing$ and greater. Protected against access to hazardous parts with the back of a hand.	1	Protected against vertically falling water drops. Vertically falling drops shall have no harmful effects.
2	Protected against solid foreign objects of 12.5mm $\varnothing$ and greater. Protected against access to hazardous parts with a finger.	2	Protected against vertically falling water drops when enclosure tilted up to 15°. Vertically falling drops shall have no harmful effects when the enclosure is tilted at an angle up to 15° on either side of the vertical.
3	Protected against solid foreign objects of 2.5mm $\varnothing$ and greater. Protected against access to hazardous parts with a tool.	3	Protected against spraying water. Water sprayed at an angle up to 60° on either side of the vertical shall have no harmful effects.
4	Protected against solid foreign objects of 1mm $\varnothing$ and greater. Protected against access to hazardous parts with a wire.	4	Protected against splashing water. Water projected in splashes against the enclosure from any direction shall have no harmful effects.
5	Dust-protected. Ingress of dust is not totally prevented, but dust shall not penetrate in a quality to interfere with satisfactory operation of the apparatus or to impair safety.	5	Protected against water jets. Water projected in jets against the enclosure from any direction shall have no harmful effects.
6	Dust-tight. No ingress of dust	6	Protected against powerful water jets. Water projected in powerful jets against the enclosure from any direction shall have no harmful effects.
		7	Protected against the effects of temporary immersion in water. Ingress of water in quantities causing harmful effects shall not be possible when the enclosure is temporarily immersed in water under standardised conditions of pressure and time.
		8	Protected against the effects of continuous immersion in water. Ingress of water in quantities causing harmful effects shall not be possible when the enclosure is continuously immersed in water under conditions which shall be agreed between manufacturer and user but which are more severe than for numeral 7.

ConCept

Modular connector system

The cost-effective customer-specific solution is called **ConCept**.

This new modular system consists of a number of modules that differ in pole number and electrical ratings. The modules can be combined in any desired combination to create a complete connector.

Advantages:

- adaptable to individual requirements
- extremely versatile providing over 500 different insert combinations and many different housing options
- Signal and power within a single connector now possible

Frames

3 male and female modules with various ratings combined with 2, 3, 5 and 7 modules permit 562 different connector combinations.

This modular connector system can be attached to the rail using a versatile adapter.

For use with standard hoods and housings for heavy-duty connectors they provide a reliable link between machine and panel.

Modules

No. of poles	20
Connection	Crimp
Cross-section	0,08 - 0,52 mm ²
Rated voltage	63 Vac
Rated current~	5 A max.

No. of poles	10
Connection	Crimp
Cross-section	0,14 - 2,5 mm ²
Rated voltage	250 Vac
Rated current~	10 A max.

No. of poles	5
Connection	Crimp

DiRect

Rail Mounting Adapter

The direct connection to the rail,

With the new **DiRect** Rail Adapter the heavy duty insert can be mounted directly to the rail.

- simple, direct wiring
- no need for housing
- adjustable for various pole numbers
- error-free connection through pin-coding
- easy marking directly on release lever of the adapter
- simple preassembly of the panel
- test facility in assembled state

latch release

DiRect onto the rail without a plug and socket at the panel wall

Able to take HDC, RSV 1.6, and D-Sub-connectors.

Material data:

Plastic: glass fibre reinforced Polyamide

Colour: grey/orange

latch release

RSV 1.6 connector system

Material Data	
Insulation	PA 66
Colour	Grey
Flammability class	UL 94 V0
Temperature range	-20...+110 °C

Contact systems	Type CB/CS	Type GB/GS
Base contact material	CuZn	CuZn
Contact surface	Gold or tin plated	Gold or tin plated
Mating cycles	Gold plated ≤ 500	Gold plated ≤ 100
	Tin plated ≤ 100	Tin plated ≤ 50
Spring	Bright stainless steel	Bright stainless steel
Connectable conductors		
	mm ²	0,14...2,5
	AWG	26...12
Insulation stripping length	mm	4

Characteristic system value	Soldered version	Crimped version
Pitch	mm	5
Distance between rows	mm	5
Polarisation	Yes	Yes
Misalignment protection	Yes	Yes
Connection	Solder in LP	Crimp/Snap-in
Isolation resistance	MΩ	≥10 ³
Through resistance	mΩ	≤ 5,0

VDE rated data	Soldered version	Crimped version
Rated cross section	mm ²	0,14...2,5
Rated current	A	see derating curves*
Rated voltage	Vac	250
	Vdc	300
		380
		450

UL rated data	Soldered version	Crimped version
Rated voltage	Vac	300
Rated current	A	10 max.
Conductor sizes	AWG	–
		26...12

CSA rated data	Soldered version	Crimped version
Rated voltage	Vac	250
Rated current	A	13 max.
Conductor sizes	AWG	–
		26...12

SEV (GZB) rated data	Soldered version	Crimped version
Rated cross section	mm ²	–
Rated voltage	Vac	250
		to 2,5
		400

* Additional colours on request.

* Additional derating curves on request.

Soldered version

DUT RSV 1.6 CS on LB, 6-pole, 1,5 mm² conductor

Crimped version

4-pole pin and socket housing, conductor H07V-K1.5

DUT: RSV 1.6 CS on LB, 12-pole, 1,5 mm² conductor

12-pole pin and socket housing, conductor H07V-K1.5

DUT: RSV 1.6 CS on LB, 36-pole, 1,5 mm conductor

36-pole pin and socket housing, conductor H07V-K1.5

Approvals

For the mounting of PCB's it should be noted that the rated data given in the catalogue relate only to the connection elements. The necessary creepage and clearance paths must be observed in connection with the respective application in accordance with VDE 0110 .

The current-carrying capacity of PCB'S is to be determined according to DIN IEC 326, Part 3.

Approvals

For the mounting of PCBs, it should be noted that the rate data given in the catalogue relate only to the connection elements. The necessary creepage and clearance paths must be observed in connection with the respective application in accordance with VDE 0110.

The current-carrying capacity of PCBs is to be determined according to DIN IEC 326 Part 3 .

LP printed circuit board terminal system

System overview

- Screw connection max. 2.5 mm²

The LP printed circuit board terminal system is an extensively developed range of terminals offering the benefits of high contact density and extensive user options. These single, double and triple level terminal blocks can be joined via dovetails to provide a larger number of poles.

The LP system also offers the options of safe functioning testing via test points and continuous monitoring via LEDs.

Further advantages of this system are:

- Pitch 5.08 mm
Pitch 5.00 mm
Pitch 7.62 mm
Pitch 7.50 mm
Pitch 10,00 mm
Pitch 15,00 mm
UL-approved for 600 V
- Weidmüller clamping yoke system
- Conical wire entry
- M3 clamping screw for supply connection
- Solder pin length: 3.2 and 4.5 mm
- Simple, durable marking option with dekafix

System enhancements, such as disconnect and fuse elements, function indicators and marking tag carriers can be snap-fitted for a range of variants.

Approvals

For the mounting of PCBs, it should be noted that the ratings in this catalogue relate only to connectors.
The necessary PCB creepage and clearance paths must be determined in accordance with VDE 0110 b.
The current capacity of the PCBs is to be observed according to DIN IEC 326 part 3.

Accessories

Screwdriver
Marking strip KSW

Also available: Blank marking strips to be written on with marking pen type ST1. Special print on request, provided an minimum of 100 cards = 1.000 strips.

GSE 5 printed circuit board terminals

- Screw connection max. 2.5 mm²

The GSE 5 printed circuit board terminal system is an extensive range of terminals with:

- Weidmüller clamping yoke system
- Conical wire entry with error-free connection
- Pitch 5,08 mm
Pitch 5,00 mm
Pitch 7,62 mm
Pitch 7,50 mm

The versatile design of these terminals also enables special customer requirements to be met. For example, mixed pitch or colour-coded printed circuit board terminal poles.

A **TR** and **RE** connector for fibre optic cable connection complements the system. Further information can be provided on request.

**** Do not use for new development**

Approvals

For the mounting of PBCs. It should be noted that the rated data given in the catalogue relate only to the connection elements. The necessary creepage and clearance paths must be observed in connection with the respective application in accordance with VDE 0110. The current-carrying capacity of PBCs is to be determined according to DIN IEC 326.P.3.

List on request

The GSE 5 strips are delivered with an AP at the far right or left

Mounting note:

To cover the tolerances between connecting elements and printed circuit boards, we recommend the fitting of max. 35 poles. A half-pitch spacing should then be allowed.

For the mounting of PBCs, it should be noted that the rated data given in the catalogue relate only to the connection elements. The necessary creepage and clearance paths must be observed in connection with the respective application in accordance with VDE 0110. The current-carrying capacity of PBCs is to be determined according to DIN IEC 326.P.3.

LPA / LPK System Printed circuit board terminals

System overview

- Screw connection max. 2.5 mm²

The LPA/LPK printed circuit board terminal system has a connection with high density and low space requirement.

This provides important user benefits:

- prevents incorrect cable positioning into terminal
- simple and permanent marking with decafix

Moreover, reliable function check via test point, and the ability to monitor functions continuously by LEDs are features you should expect from an advanced PCB connection system.

- Pitch 5.08 mm
Pitch 5.00 mm
Pitch 7.62 mm (for LPK)

The metal parts are the heart of the printed circuit board terminals. The following are used here:

- The Weidmüller clamping yoke system and
- The Weidmüller-TOP element.

All components meet the highest quality requirements.

The clip-together-design of these terminals also enables special customer requirements to be met. For example, mixed pitch or colour-coded poles on the printed circuit board terminal.

System extensions, such as disconnect and fuse elements, as well as function indicators and tag carriers, can be snapped onto all the different PCB terminals.

Approvals

For the mounting of PCBs, it should be noted that the rated data given in the catalogue relate only to the connection elements. The necessary creepage and clearance paths must be observed in connection with the respective application in accordance with VDE 0110.

The current-carrying capacity of PCBs is to be determined according to DIN IEC 326 P.3.

Printed circuit board terminals press-in system LPA1E

- Screw connection max. 1,5 mm²

The LPA1E printed circuit board terminal uniquely combines the advantages of the elastic press-fit technique and the screw connection of the conductor:

- Conductor connection is durable, electro-corrosion-resistant, gas-tight
- Easy, low-cost installation
- Helps avoid soldering problems (bridges) with a high density of connections
- Fully automatic component insertion in the printed printed circuit board on one or both sides
- No pollution due to solder and cleaning agent vapours

An elastic press-fit pin to DIN 41611, Part 5, together with the proven Weidmüller clamping yoke system makes the reliable connection the conductor and the printed circuit board.

The elastic Varipin® press-fit profile used, has already proven itself in various uses with DIN connectors. It offers considerable advantages over comparable rigid press-fit pins:

- Low press-fit force
- Low deformation of the plated contact hole
- low loading of printed circuit board
- Durable spring action for reliable contact
- Non-critical tolerances of the metal-plated holes in the printed circuit board

Plastic pegs on the terminal base also provide for firm seating on the printed circuit board.

The ET-PRESS bench press is a manual hand-lever press for use with Weidmüller printed circuit board terminals.

The advantages are:

- Accepts all printed circuit boards
- Easy adjustment to varying printed circuit board thickness
- Simple operation

The ET-PRESS, in conjunction with the punch holder set and corresponding press-fit, press-out punch sets, is a hand-lever operated press for pressing our range of press-fit components into printed circuit boards.

The pin blocks are pressed in by means of a special press-fit head. The printed circuit board terminals can easily be pressed into the terminal insulator by direct force transmission.

The press features a press table designed for universal printed circuit board application and laterally mounted press-fit and press-out punch magazine.

Accessories include special tools for adjusting and setting the press and also spacers for adjustment to the printed circuit board thickness. The ET-PRESS comes assembled (only hand-lever has to be screwed into the tapped hole provided) in a transport case with operating instructions.

Characteristics of this connection technique:

- Connection of conductor in line of sight, parallel to screwdriver
- Easy transition to other connection types possible
- Can be used in PCB terminals with vertical or horizontal cable entry
- Can be used in PCB terminals and modular terminals
- Solid conductors from 0.75 mm² can be plugged in directly
- Flexible and thin single-wire conductors can be connected without difficulty by use of the spring-release lever
- The connected conductor can be removed without special tools via the built-in spring-release levers

DSG1.5 printed circuit board terminals enable the independent connection of two conductors per pole. Two soldered pins ensure secure fixing of the wiring to the PCB.

The DSG1.5E printed circuit board terminal is a distinctly smaller version of the DSG1.5. Here, the functions have been reduced to the essentials. A standard screwdriver to DIN 5264 can be used to release connection wires.

This image shows a single sheet of white paper with horizontal blue or grey ruling lines. The lines are evenly spaced and run across the width of the page. There is a small dark rectangular mark at the top left corner, possibly a staple or a piece of tape. The paper appears to be part of a binder or folder.

For mounting pin headers on printed circuit board

BLA/SLA connector system

System overview

Printed circuit board connectors with screw or crimp connection allow functional units to be plugged in easily. Rapid disconnectability of the connection with high reliability, the high load rating and the wide assortment are the reasons behind the success of these printed circuit board connectors.

Socket blocks of the BLA/SLA system are not joined side by side in a pin header. Pin header and socket blocks must always be connected as a pair.

Weidmüller embodies the state of the art in BLA/SLA printed circuit board connector systems. The housings, made of glass fibre reinforced PBT plastic, are

- Pitch 5.08
- Flame-resistant to UL 94 V0,
- Durable,
- Accurately pitched,
- and have high continuous operating temperature,

The connector system offers,

- Conical wire entry,
- Clear marking surfaces,
- Coding without pole loss,
- Great depth of range and,
- Screw and crimp connection options.

The metal parts are the heart of the connector. The following are used here:

- The Weidmüller clamping yoke system,
- The Weidmüller TOP element,
- The Weidmüller double flat spring contact

All components meet the highest quality standards.

This overview shows the entire system of printed circuit board connectors, supplemented by connectors for mounting rail assembly and for use on level surface.

BLA/SLA connector system

Derating curves

For the mounting of PCBs, it should be noted that the rated data given in the catalogue relate only to the connection elements. The necessary creepage and clearance paths must be observed in connection of the respective application with accordance to VDE 0110. The current-carrying capacity of PCBs is to be determined according to DIN IEC 326 P.3.

System overview

- **BLZ 5.08/SL 5.08 (Pitch 5.08 mm)**
- **BLZ 7.62/SL 7.62 (Pitch 7.62 mm)**

With their new wire range up to 2.5 mm^2 BLZ 5.08/SL 5.08 and BLZ 7.62/SL 7.62 printed circuit board connectors embodying a wealth of innovative features are a state of the art system.

Continuous further product development provides for high operating safety. The large number of BLZ 5.08/SL 5.08 socket block variants enable a wide range of conductor routing requirements to be met. Conductors can be fed parallel to the circuit board, or from above or below the circuit board. The system is complemented by the new BLZ 7.62/SL 7.62 system, which is similarly suitable for a wire range up to 2.5 mm^2 .

Both systems offer:

- Conical wire entry
- A clear marking surface
- Coding without pole loss
- Compatibility with other connector systems

The housings made of PBT plastic are

- Flame-resistant to UL 94 V0
- Durable and
- Accurately pitched

The following metal parts are used:

- The Weidmüller clamping yoke system
- The Weidmüller Top element and
- The Weidmüller double flat spring contact

All components fulfil the highest quality standards.

Plug face BLZ 5.08

Plug face BLZ 7.62

Note:

Products from the BLZ/SL series must only be assembled when not live. If it is necessary to assemble while carrying a low power, please ask us for values that we have ascertained through experience. The PCB connectors comply with DIN VDE 0627.

When mounting PCB's it should be noted that the rated data given in the catalogue relate only to the connection elements. The necessary creepage and clearance paths must be observed for the respective application as specified in VDE 0110. The current-carrying capacity of PCB's is to be determined according to DIN IEC 326 Part 3.

BLZ 5.08/SL 5.08

Technical data/Derating curves

The SL 5.08E offers in a unique way the advantages of the flexible press-fit system and is ideal for both SMD and conventional printed circuit board assembly.

The SL 5.08E offers:

- Easy, low-cost installation
- Helps avoid soldering problems (bridges) with a high density of connections
- Fully automatic component insertion in the printed circuit board on one or both sides
- No pollution due to solder and cleaning agent vapours
- Application for printed circuit boards thickness from 1.6 mm to maximum 3.2 mm

An elastic press-fit pin to DIN 41611 P.5, together with the proven socket-sided Weidmüller clamping yoke system makes the reliable connection between the conductor and the printed circuit board.

The elastic Varipin® press-fit profile used has already proven itself in various uses with DIN connectors. It offers considerable advantages over comparable rigid press-fit pins:

- Low press-fit force
- Low deformation of the plated contact hole
- Low loading of printed circuit board
- Durable spring action for reliable contact
- Non-critical tolerances of the metal-plated holes in the printed circuit board

P.C.B. Connectors, metric pitch

Systemübersicht

- **BL 3.5/SL 3.5 (Pitch 3.5 mm)**
- **BLZ 5.00/SL 5.00 (Pitch 5.00 mm)**
- **BLZ 7.50/SL 7.50 (Pitch 7.50 mm)**

The metric printed circuit board connector system is a logical further development of the numerous systems with an imperial pitch currently in widespread use. Metric connectors are being used more and more in industry and are proving to be the standard.

New DIN standards. Such as DIN 43356 Metric design. 25 mm multi-module for example. require specially adapted connectors. This standard was taken into special consideration in the BL 3.5/SL 3.5 connector system. With its 3.5 mm pitch. this printed circuit board connector system is also the smallest system with a screw connection.

The BL 3.5/SL 3.5 system is complemented by the new BLZ 5.00/SL 5.00 and BLZ 7.50/SL 7.50. Both system are based on the new M 2.5 clamping yoke system and offer a wire range up to 2.5 mm² for both solid and flexible conductors (also with ferrule).

The systems are characterised by

- Space-saving design
- Conical cable entry
- Clear marking surface
- Coding in the PCB grid without pole loss
- Stackable in rows in the PCB grid
- Low mating and unmating force

The PBT plastic housings are

- Flame-resistant to UL 94 (V0)
- Durable and
- Accurately pitched

The following metal parts are used

- Octagonal pin contact
- The Weidmüller clamping yoke system or tension clamp system
- The Weidmüller double spring contact

Steckgesicht BL 3.5

Steckgesicht BLZ 5.00

Steckgesicht BLZ 7.50

Note:

Products from the BL 3.5 /SL 3.5 series must only be assembled when not live. If it is necessary to assemble while carrying a low power, please ask us for values that we have ascertained through experience. The PCB connectors comply with DIN VDE 0627.

When mounting PCB's it should be noted that the rated data given in the catalogue relate only to the connection elements. The necessary creepage and clearance paths must be observed for the respective application as specified in VDE 0110. The current-carrying capacity of PCB's is to be determined according to DIN IEC 326 Part 3.

SLA BB4/8 mounting brackets

for the BLA/SLA system, snaps onto SLAS pin block.

Mounting bracket width 7.62 mm

Type	Cat. No.	Qty.
SLA BB4 OR	157172	50
SLAS, SLS and SLA KU on a level base. Use in connection with SLA BB2 or SLA BB2R enables tight connection to the socket block.		
SLA BB8RH OR	144606	20
For mounting the SLAS or SLS on a level base. The fixing hoods enable a tight connection to the socket block with lateral dovetail guide. When mounting several pin blocks in a row, one mounting bracket can be used for two pin blocks.		
SLA BB8 OR	159284	20
For mounting the SLAS or SLS on a level base. When mounting several pin headers in a row, one mounting bracket can be used for two pin blocks.		

SLA BB14 mounting bracket

for the BLA/SLA system.

Mounting bracket width 5.08 mm

Type	Cat. No.	Qty.
SLA BB14 OR	159420	100
For engagement on the SLAD pin block, in order to screw the pin headers to printed circuit boards. Use with SLA BB12R enables tight connection to socket block.

Connector with screw connection to DIN 41612

UESD B32 / UESD S32

System overview

Euro cards with connectors to DIN 41612 are the state of the art in reference to 19" electronic plug-in modules in the field of measurement and control technology.

The 32-pole Weidmüller connector to DIN 41612 consists of the UESD B32 socket block with the Weidmüller TOP 1.5 K screw connection element and the UESD S32/90° and 180° pin blocks. This connector is ideal for a disconnectable conductor with screw connection to assemblies in 19" modules which are mounted in rows at a distance of 4 pitch units.

Features:

- Screw connection for DIN 41612, Version D
- TOP 1.5 K
- Cable entry and screw direction parallel
- Plating of contacts adapted to function, gold-plated contact area, tin-plated solder area

AICS RS 232 / LWL Interface converter

AICS

Instead of having additional components along the transfer path, this innovative concept reduces the number of parts in the transfer chain. This is achieved by **Integration of electrical functions in the connector**. In contrast to conventional technology we speak here of AICS (**A**CTIVE **I**NTELLIGENT **C**ONNECTING **S**YSTEM).

- Minimises wiring through active components in the connector
- Reduces number of interfaces
- Saves costs
- Makes process more reliable
- Simplifies maintenance
- Miniaturisation

AICS locking foot

Fibre optics

Optical data transmission via glass fibres offers decisive advantages compared to copper cables in terms of resistance to electromagnetic interference, transmission distance and speed. Moreover fibre optics easily and quickly fulfil the European Standard (EN) on EMC. Interference-free transmission of data in an electromagnetically strongly polluted industrial environment is inexpensive and works reliably from the very beginning. For this reason the products first launched were converters from electrical signals into optical signals. The extensive market for V.24/RS-232C is particularly interesting (**AICS RS-232/LWL**).

Advantages of glass fibre optics

- Increased reliability
 - no effect by electromagnetic interference
 - absolute potential separation
 - overvoltage-safe
 - no echos
 - bugging-proof
- Do not create electromagnetic interference
- Long transmission distances through low attenuation
- Very high transmission speeds
- Simple connection
- Low cable weight
- Easy to lay in conduits

Description of system

>The fibre optic modules permit asynchronous full-duplex transmission for serial V.24/RS-232C-interfaces with software handshake (Xon/Xoff protocol) via a fibre optic duplex cable.

Two different module technologies are available:

For distances up to 60 m we recommend the use of modules for low-cost PMMA cable (..LWL-K). These can be assembled without special tools. For longer distances it is necessary to use modules for glass fibre cables (..LWL-G) - through low attenuation distances up to 2000 m are possible.

A DTE/DCE switching is integrated to permit matching to all RS-232C interfaces.

The modules is designed as a connector in a metallised SUB-D housing and can be attached like a standard SUB-D connector to a 25-pole RS-232C interface. For simple attachment to a TS 35 rail there is a simpler form in a compact plastic housing. Connection to the RS-232 interface ensue via a 9pole SUB-D connector. For easy function monitoring we have integrated LEDs for power / receive and transmit.

If power supply via the SUB-D connector, a separate power supply can be plugged in via a 3-pole connector.

Fibre optic connection uses an FSMA connector.

EMC testing

All modules fulfil the EMC standards for:

- Freedom from interference
 - EN50082 T1+2,
 - IEC 801 -2/-3/-4 Level 3
- Interference emission
 - EN55022 Level. B

Uses

- Data transfer
- Control technology
- Measurement and regulation
- Ex-environments

Applications

- Bridging large distances between 2 devices (computer and/or peripherals)
- Use as a serial RS-232C interface in a EM-polluted environment, e.g.:
 - attaching a printing to an industrial PC, control etc.
 - remote monitoring, programming, operation of controls and the like.

AICS RS 232/LWL
Interface converter

The RS 232/LWL module permits asyn-
chronic full-duplex transmission via fibre
optics for the V.24/RS-232-C-interface.
The equipment attached must be suitable
for software handshake
(Xon/Xoff protocol).

Features:

- Transmission distance up to 2000 m
(glass fibre) and 60 m (PMMA fibre)
- Switchable pin layout (DTE/DCE)
- Simple connection
- Compact design
- Can be integrated into existing systems
