- Special mechanical and electrical configurations

TanFilm resistor networks are designed for use in applications requiring a high degree of reliability, stability, tight tolerance, close TCR tracking, and low noise. Our continuous feed, high vacuum sputtering process insures uniform properties from network to network. Precise state-of-the-art laser trimming enables us to easily zero in

the tightest ratios. Gold-plated copper leads are thermal pulse bonded to large-area gold conductor pads on the ceramic substrate assuring the most reliable termination and long-term stability. Passivated Tantalum Nitride resistor material offers performance far superior to military specifications and excellent environmental protection.

The versatile nature of our photo-etch process makes it readily adaptable to meet special customer requirements. Custom circuit designs and special mechanical configurations can be easily achieved with a modest set up charge. Full military screening is also available with all units.
