NEC

MOS INTEGRATED CIRCUIT

μPD431000A-X

1M-BIT CMOS STATIC RAM
128K-WORD BY 8-BIT
EXTENDED TEMPERATURE OPERATION

Description

The μPD431000A-X is a high speed, low power, and 1,048,576 bits (131,072 words by 8 bits) CMOS static RAM.

The μPD431000A-X has two chip enable pins (/CE1, CE2) to extend the capacity. And battery backup is available. In addition to this, A and B versions are low voltage operations.

The μPD431000A-X is packed in 32-pin PLASTIC SOP, 32-pin PLASTIC TSOP (I) (8 × 13.4 mm) and (8 × 20 mm).

Features

- 131,072 words by 8 bits organization
- Fast access time: 70, 85, 100, 120, 150 ns (MAX.)
- Low voltage operation (A version: V_{CC} = 3.0 to 5.5 V, B version: V_{CC} = 2.7 to 5.5 V)
- Operating ambient temperature: T_A = –25 to +85 °C
- Low V_{CC} data retention: 2.0 V (MIN.)
- Output Enable input for easy application
- Two Chip Enable inputs: /CE1, CE2

	Part number	Access time ns (MAX.)	Operating supply voltage V	Operating ambient temperature °C	Supply current		
					At operating mA (MAX.)	At standby μA (MAX.)	At data retention μA (MAX.) Note1
	μPD431000A-xxX	70, 85	4.5 to 5.5	–25 to +85	70	50	2.5
	μPD431000A-AxxX	70 Note2, 100	3.0 to 5.5		35 Note3	26 Note5	
★	μPD431000A-BxxX	70 Note2, 100, 120, 150	2.7 to 5.5		30 Note4	22 Note6	

Notes 1. $T_A \leq 40$ °C

2. V_{CC} = 4.5 to 5.5 V

3. 70 mA (V_{CC} > 3.6 V)

4. 70 mA (V_{CC} > 3.3 V)

5. 50 μA (V_{CC} > 3.6 V)

6. 50 μA (V_{CC} > 3.3 V)

Document No. M10430EJ9V0DS00 (9th edition)
Date Published April 2002 NS CP (K)
Printed in Japan

The mark ★ shows major revised points.

Electrical Specifications

Absolute Maximum Ratings

Parameter	Symbol	Condition	Rating	Unit
Supply voltage	V_{CC}		–0.5 Note to +7.0	V
Input / Output voltage	V_T		–0.5 Note to V_{CC} + 0.5	V
Operating ambient temperature	T_A		–25 to +85	°C
Storage temperature	T_{stg}		–55 to +125	°C

Note –3.0 V (MIN.) (Pulse width: 30 ns)

Caution Exposing the device to stress above those listed in Absolute Maximum Rating could cause permanent damage. The device is not meant to be operated under conditions outside the limits described in the operational section of this specification. Exposure to Absolute Maximum Rating conditions for extended periods may affect device reliability.

Output active from end of write	t_{OW}	5		5		5		ns	

Note See the **output load**.

Remark These AC characteristics are in common regardless of package types.

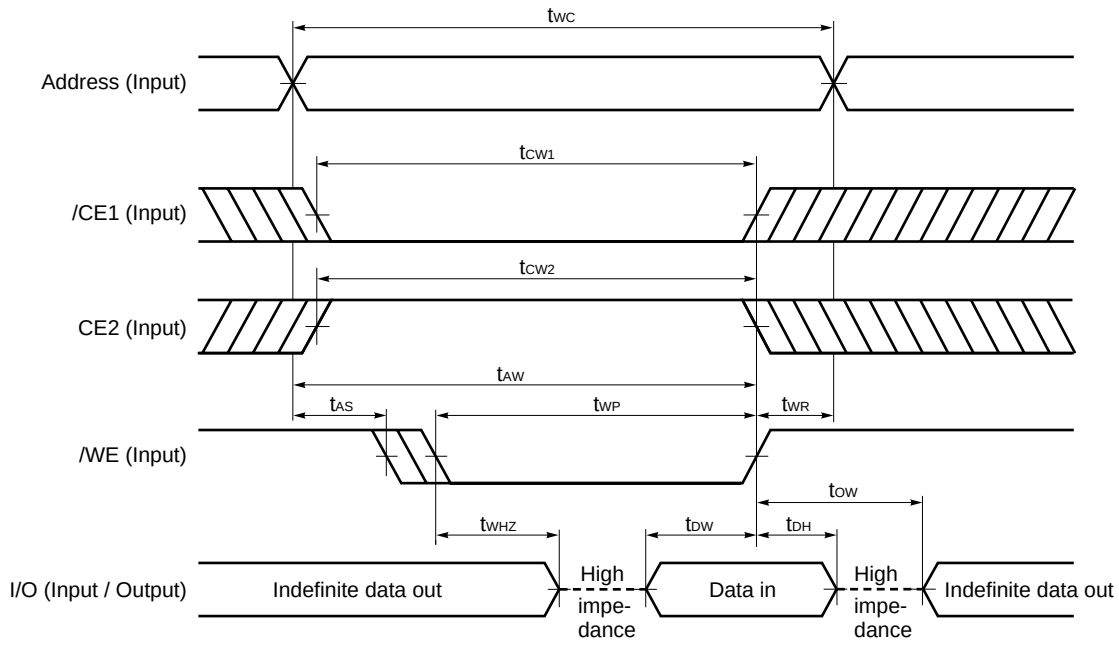
Write Cycle Timing Chart 1 (/WE Controlled)



Cautions 1. During address transition, at least one of pins /CE1, CE2, /WE should be inactivated.

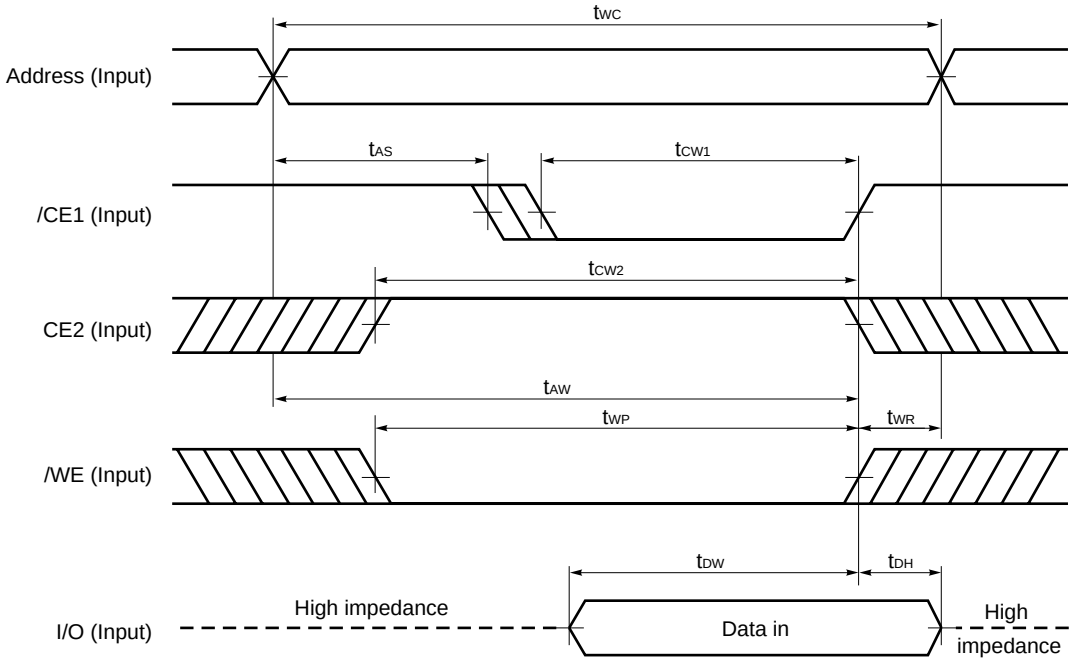
2. Do not input data to the I/O pins while they are in the output state.

Remarks 1. Write operation is done during the overlap time of a low level /CE1, /WE and a high level CE2.

2. If /CE1 changes to low level at the same time or after the change of /WE to low level, or if CE2 changes to high level at the same time or after the change of /WE to low level, the I/O pins will remain high impedance state.

3. When /WE is at low level, the I/O pins are always high impedance. When /WE is at high level, read operation is executed. Therefore /OE should be at high level to make the I/O pins high impedance.

Write Cycle Timing Chart 2 (/CE1 Controlled)

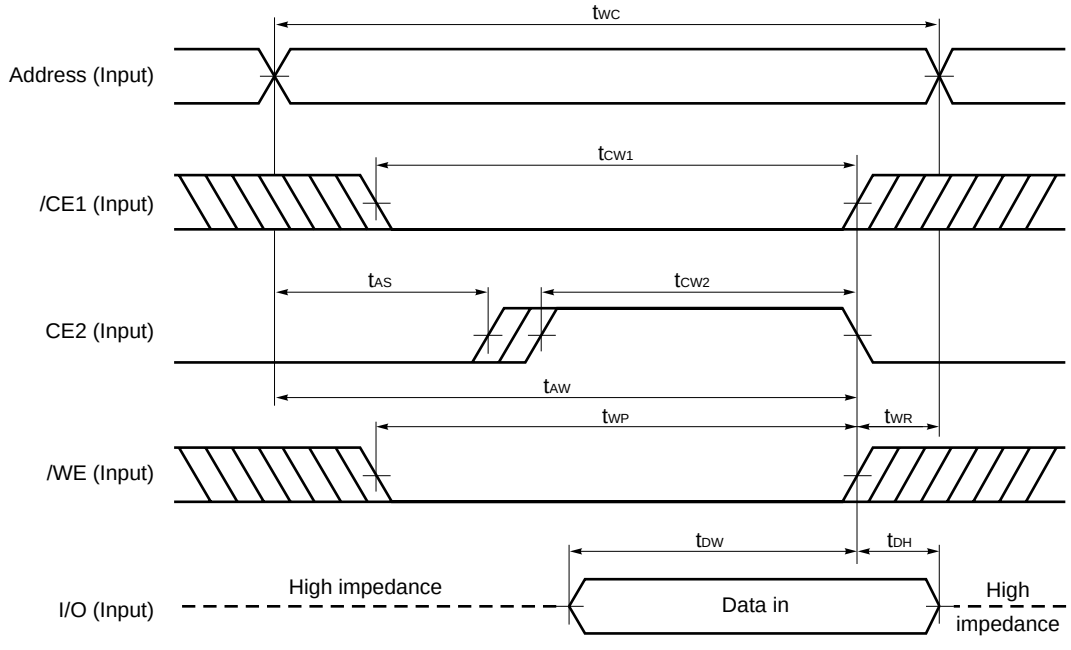


Cautions 1. During address transition, at least one of pins /CE1, CE2, /WE should be inactivated.

2. Do not input data to the I/O pins while they are in the output state.

Remark Write operation is done during the overlap time of a low level /CE1, /WE and a high level CE2.

Write Cycle Timing Chart 3 (CE2 Controlled)



Cautions 1. During address transition, at least one of pins /CE1, CE2, /WE should be inactivated.

2. Do not input data to the I/O pins while they are in the output state.

Remark Write operation is done during the overlap time of a low level /CE1, /WE and a high level CE2.

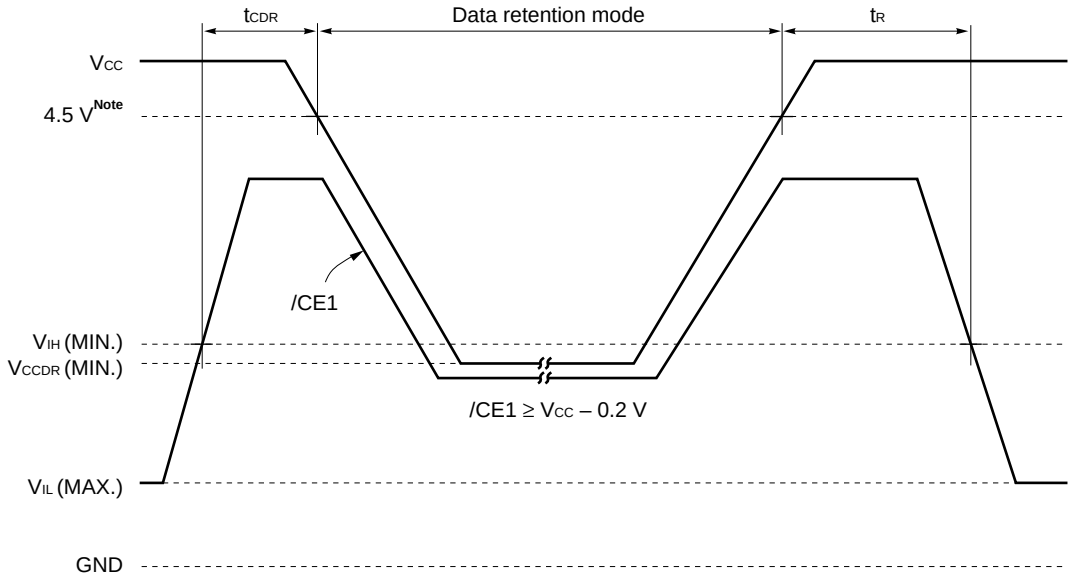
Low V_{CC} Data Retention Characteristics (T_A = –25 to +85 °C)

Parameter	Symbol	Test Condition	μPD431000A-xxX μPD431000A-AxxX μPD431000A-BxxX			Unit
			MIN.	TYP.	MAX.	
Data retention supply voltage	V_{CCDR1}	/CE1 ≥ V_{CC} – 0.2 V, CE2 ≥ V_{CC} – 0.2 V	2.0		5.5	V
	V_{CCDR2}	CE2 ≤ 0.2 V	2.0		5.5	
Data retention supply current	I_{CCDR1}	V_{CC} = 3.0 V, /CE1 ≥ V_{CC} – 0.2 V, CE2 ≥ V_{CC} – 0.2 V		0.5	20 Note	μA
	I_{CCDR2}	V_{CC} = 3.0 V, CE2 ≤ 0.2 V		0.5	20 Note	
Chip deselection to data retention mode	t_{CDR}		0			ns
Operation recovery time	t_R		5			ms

Note 2.5 μA (T_A ≤ 40 °C)

Data Retention Timing Chart

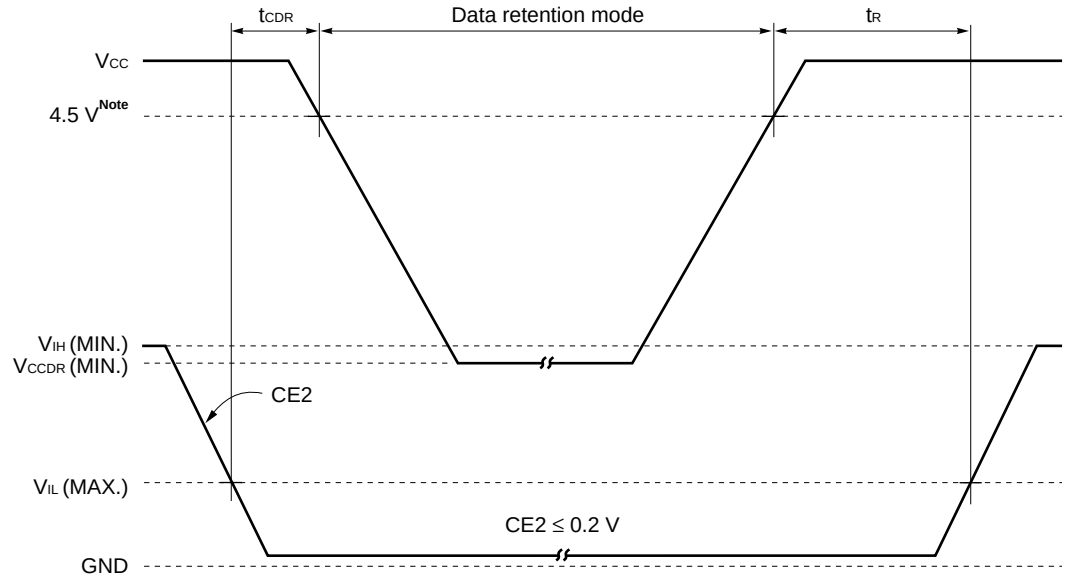
(1) /CE1 Controlled



Note A version : 3.0 V, B version : 2.7 V

Remark On the data retention mode by controlling /CE1, the input level of CE2 must be CE2 ≥ V_{CC} – 0.2 V or CE2 ≤ 0.2 V. The other pins (Address, I/O, /WE, /OE) can be in high impedance state.

(2) CE2 Controlled



Note A version : 3.0 V, B version : 2.7 V

Remark On the data retention mode by controlling CE2, the other pins (/CE1, Address, I/O, /WE, /OE) can be in high impedance state.

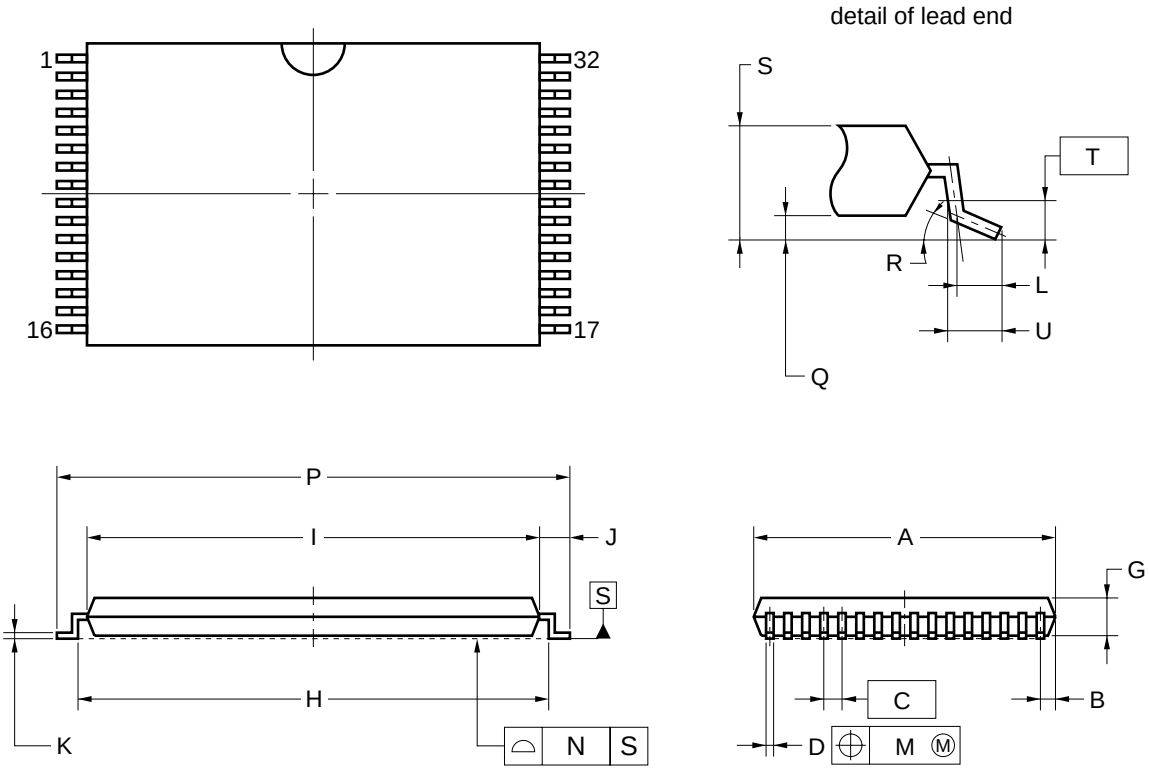
32-PIN PLASTIC TSOP(I) (8x13.4)



NOTES

1. Each lead centerline is located within 0.08 mm of its true position (T.P.) at maximum material condition.

2. "A" excludes mold flash. (Includes mold flash : 8.3 mm MAX.)

Recommended Soldering Conditions

Please consult with our sales offices for soldering conditions of the μPD431000A-X.

Types of Surface Mount Device

μPD431000AGW-xxX : 32-pin PLASTIC SOP (13.34 mm (525))
μPD431000AGZ-xxX-KJH : 32-pin PLASTIC TSOP (I) (8×20) (Normal bent)
μPD431000AGZ-xxX-KKH : 32-pin PLASTIC TSOP (I) (8×20) (Reverse bent)
μPD431000AGZ-AxxX-KJH : 32-pin PLASTIC TSOP (I) (8×20) (Normal bent)
μPD431000AGZ-AxxX-KKH : 32-pin PLASTIC TSOP (I) (8×20) (Reverse bent)
μPD431000AGZ-BxxX-KJH : 32-pin PLASTIC TSOP (I) (8×20) (Normal bent)
μPD431000AGU-BxxX-9JH : 32-pin PLASTIC TSOP (I) (8×13.4) (Normal bent)
μPD431000AGU-BxxX-9KH : 32-pin PLASTIC TSOP (I) (8×13.4) (Reverse bent)

NOTES FOR CMOS DEVICES

① PRECAUTION AGAINST ESD FOR SEMICONDUCTORS

Note:

Strong electric field, when exposed to a MOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop generation of static electricity as much as possible, and quickly dissipate it once, when it has occurred. Environmental control must be adequate. When it is dry, humidifier should be used. It is recommended to avoid using insulators that easily build static electricity. Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work bench and floor should be grounded. The operator should be grounded using wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions need to be taken for PW boards with semiconductor devices on it.

② HANDLING OF UNUSED INPUT PINS FOR CMOS

Note:

No connection for CMOS device inputs can be cause of malfunction. If no connection is provided to the input pins, it is possible that an internal input level may be generated due to noise, etc., hence causing malfunction. CMOS devices behave differently than Bipolar or NMOS devices. Input levels of CMOS devices must be fixed high or low by using a pull-up or pull-down circuitry. Each unused pin should be connected to V_{DD} or GND with a resistor, if it is considered to have a possibility of being an output pin. All handling related to the unused pins must be judged device by device and related specifications governing the devices.

③ STATUS BEFORE INITIALIZATION OF MOS DEVICES

Note:

Power-on does not necessarily define initial status of MOS device. Production process of MOS does not define the initial operation status of the device. Immediately after the power source is turned ON, the devices with reset function have not yet been initialized. Hence, power-on does not guarantee out-pin levels, I/O settings or contents of registers. Device is not initialized until the reset signal is received. Reset operation must be executed immediately after power-on for devices having reset function.

- **The information in this document is current as of April, 2002. The information is subject to change without notice. For actual design-in, refer to the latest publications of NEC's data sheets or data books, etc., for the most up-to-date specifications of NEC semiconductor products. Not all products and/or types are available in every country. Please check with an NEC sales representative for availability and additional information.**
- No part of this document may be copied or reproduced in any form or by any means without prior written consent of NEC. NEC assumes no responsibility for any errors that may appear in this document.
- NEC does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from the use of NEC semiconductor products listed in this document or any other liability arising from the use of such products. No license, express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC or others.
- Descriptions of circuits, software and other related information in this document are provided for illustrative purposes in semiconductor product operation and application examples. The incorporation of these circuits, software and information in the design of customer's equipment shall be done under the full responsibility of customer. NEC assumes no responsibility for any losses incurred by customers or third parties arising from the use of these circuits, software and information.
- While NEC endeavours to enhance the quality, reliability and safety of NEC semiconductor products, customers agree and acknowledge that the possibility of defects thereof cannot be eliminated entirely. To minimize risks of damage to property or injury (including death) to persons arising from defects in NEC semiconductor products, customers must incorporate sufficient safety measures in their design, such as redundancy, fire-containment, and anti-failure features.
- NEC semiconductor products are classified into the following three quality grades:
  "Standard", "Special" and "Specific". The "Specific" quality grade applies only to semiconductor products developed based on a customer-designated "quality assurance program" for a specific application. The recommended applications of a semiconductor product depend on its quality grade, as indicated below. Customers must check the quality grade of each semiconductor product before using it in a particular application.

  "Standard": Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots

  "Special": Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support)

  "Specific": Aircraft, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems and medical equipment for life support, etc.

  The quality grade of NEC semiconductor products is "Standard" unless otherwise expressly specified in NEC's data sheets or data books, etc. If customers wish to use NEC semiconductor products in applications not intended by NEC, they must contact an NEC sales representative in advance to determine NEC's willingness to support a given application.

  (Note)

  (1) "NEC" as used in this statement means NEC Corporation and also includes its majority-owned subsidiaries.

  (2) "NEC semiconductor products" means any semiconductor product developed or manufactured by or for NEC (as defined above).
