

Size: 400 x 300 mm

Self-adhesive reflective (blank)

Aluminium placard laminated with self adhesive reflective label

Magnetic support (reflective orange)

Orange placard for identification of road transport for dangerous goods

The ADR regulation (European agreement on the International Carriage of Dangerous Goods by Road) requires the identification of tank/or other transports of dangerous substances on the road. These placards must be affixed to both sides and the rear of road tankers and containers on their transport through Europe. These placards have two areas:

- the top two numbers indicate the primary and secondary hazard of a substance
- the bottom four digits represent the UN number.

284650

258939

256412

On request Brady can also complete the placard with the numbers you want.

Marking vehicles, loading points, pillars, etc. with warning stripes ensures that contours and size stand out. This can prevent accidents occurring during loading - especially important when harmful substances are being transported and damaging the packaging could be dangerous.
