

1 PRODUCT OVERVIEW

OVERVIEW

The KS57C5204/C5208/C5304/C5308/C5312 single-chip CMOS microcontroller has been designed for high-performance using SAM 47 (Samsung Arrangeable Microcontrollers). SAM 47, Samsung's newest 4-bit CPU core is notable for its low energy consumption and low operating voltage.

You can select from three ROM sizes: 4K, 8K, or 12K bytes.

Except for the difference in ROM size, the features and functions of the KS57C5204 and the KS57C5208 are identical and the KS57C5304, KS57C5308, and the KS57C5312 are identical.

With its DTMF generator, watchdog timer function, and versatile 8-bit timer/counters, the KS57C5204/C5208 /C5304/C5308/C5312 offers an excellent design solution for a wide variety of telecommunication applications.

Up to 35 pins of the available 42-pin SDIP or 44-pin QFP package for the KS57C5204/C5208, and up to 23 pins of the available 30-pin SDIP or 32-pin SOP package for the KS57C5304/C5308/C5312 can be assign to I/O. Six vectored interrupts for KS57C5204/C5208 and four vectored interrupts for KS57C5304/C5308/C5312 provide fast response to internal and external events. In addition, the KS57C5204/C5208/C5304/C5308/C5312's advanced CMOS technology provides for low power consumption and a wide operating voltage range.

OTP

The KS57C5204/C5208 microcontroller is also available in OTP (One Time Programmable) version, KS57P5208. The KS57C5304/C5308/C5312 microcontroller is also available in OTP (One Time Programmable) version, KS57P5308/P5312. The KS57P5208/P5308/P5312 microcontroller has an on-chip 8K-byte (P5208/P5308) or 12K-byte (P5312) one-time-programmable EPROM instead of masked ROM. The KS57P5208 is comparable to KS57C5204/C5208, both in function and in pin configuration. Also, the KS57P5308/P5312 is comparable to the KS57C5304/C5308/C5312, both in function and in pin configuration.

KS57P5208/P5308/P5312 OTP

OVERVIEW

The KS57P5208/P5308/P5312 single-chip CMOS microcontroller is the OTP (One Time Programmable) version of the KS57C5204/C5208/C5304/C5308/C5312 microcontroller. It has an on-chip EPROM instead of masked ROM. The EPROM is accessed by a serial data format.

The KS57P5208/P5308/P5312 is fully compatible with the KS57C5208/C5308/C5312, both in function and in pin configuration. Because of its simple programming requirements, the KS57P5208/P5308/P5312 is ideal for use as an evaluation chip for the KS57C5208/C5308/C5312.
