

# **7846A**16-Bit Digital to Analog Converter

#### **FEATURES:**

- Rad-Pak® technology-hardened against natural space radiation
- · Total dose hardness:
  - > 100 krad (Si), depending upon space mission
- Excellent Single Event Effects
  - SEL<sub>TH</sub> > 114 MeV/mg/cm<sup>2</sup>
  - SEU < 8 MeV/mg/cm<sup>2</sup>
- Package:
  - -28 pin Rad-Pak® Flat Pack
- Microprocessor compatible with readback capability
- 16-Bit monotonicity over temperature
- ±2 LSBs integral linearity error
- Unipolar or bipolar output
- Multiplying capability
- Low power (100 mW typical)

#### **DESCRIPTION:**

Maxwell Technologies' 7846A 16-Bit DAC converter microcircuit features a greater than 100 krad (Si) total dose tolerance, depending upon space mission. The 7846A has  $V_{\text{RFF}_{+}}$  and  $V_{\mbox{\tiny RFF}\mbox{\tiny -}}$  reference inputs and an on-chip output amplifier which gives the option of unipolar or bipolar output. The 7846A uses a segmented architecture. The 4 MSBs in the DAC latch select one of the segments in a 16-resistor string. Both taps of the segment are buffered by amplifiers and fed to a 12-bit DAC, which provides a further 12 bits of resolution. This architecture ensures 16-bit monotonicity. Excellent integral linearity results from tight matching between the input offset voltages of the two buffer amplifiers. In addition to the excellent accuracy specifications, the 7846A also offers a comprehensive microprocessor interface. There are 16 data I/O pins, plus control lines (CS, R/W, LDAC and CLR). R/W and CS have readback function which allows writing to and reading from the I/O latch.

Maxwell Technologies' patented Rad-Pak® packaging technology incorporates radiation shielding in the microcircuit package. It eliminates the need for box shielding while providing the required radiation shielding for a lifetime in orbit or space mission. In a GEO orbit, Rad-Pak provides greater than 100 krad (Si) radiation dose tolerance. This product is available with screening up to Class S.

Table 1. 7846A PINOUT DESCRIPTION

Pin	Sүмвог	Description	
1-3	DB2-DB0	Data I/O pins. DB0 is LSB.	
4	V <sub>DD</sub>	Positive supply for analog circuitry. This is +15V nominal.	
5	V <sub>OUT</sub>	DAC output voltage pin.	
6	R <sub>IN</sub>	Input to summing resistor of DAC output amplifier. This is used to select output voltage ranges.	
7	$V_{REF_{+}}$	$V_{REF+}$ Input. The DAC is specified for $V_{REF+}$ = +5V.	
8	V <sub>REF</sub> -	V <sub>REF</sub> . Input. For unipolar operation connect V <sub>REF</sub> . to 0V and for bipolar operation connect it to -5V. The device is specified for both conditions.	
9	V <sub>SS</sub>	Negative supply for the analog circuitry. This is -15V nominal.	
10-19	DB15-DB6	Data I/O pins. DB15 is MSB.	
20	DGND	Ground pin for digital circuitry.	
21	V <sub>CC</sub>	Positive supply for digital circuitry. This is +5V nominal.	
22	R/W	R/W Input. This can be used to load data to the DAC or to read back the DAC latch contents.	
23	CS	Chip select input. This selects the device.	
24	CLR	Clear Input. The DAC can be cleared to 000000 or 100000.	
25	LDAC	Asynchronous load input to DAC.	
26-28	DB5-DB3	Data I/O pins.	

Table 2. 7846A Absolute Maximum Ratings 1

Parameter	Min	Max	Unit
V <sub>DD</sub> to DGND	-0.3	+17	V
V <sub>CC</sub> to DGND	-0.3	V <sub>DD</sub> +0.3 or 7 (Whichever Is Lower)	V
V <sub>SS</sub> to DGND	-17	+0.3	V
V <sub>REF+</sub> to DGND	-25	+25	V
V <sub>REF-</sub> to DGND	-25	+25	V
V <sub>OUT</sub> to DGND <sup>2</sup>	-25	+25	V
R <sub>IN</sub> to DGND	-25	+25	V
Digital Input Voltage to DGND	-0.3	V <sub>CC</sub> +0.3	V
Digital Output Voltage to DGND	-0.3	V <sub>CC</sub> +0.3	V
Power Dissipation To +75 °C Derates above +75 °C		1000 10	mW mW/°C
Thermal Inpedance	$\Theta_{JC}$	2.78	°C
Operating Temperature Range	-55	+125	°C
Storage Temperature Range	-65	+150	°C

<sup>1.</sup> Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods of time may affect device reliability. Only one absolute maximum rating may be applied at any one time.

TABLE 3. DELTA LIMITS

Parameter	Variation	
I <sub>DD</sub>	±10% of value specified in Table 4.	
I <sub>EE</sub>	±10% of value specified in Table 4.	
I <sub>cc</sub>	±10% of value specified in Table 4.	

<sup>2.</sup>  $V_{OUT}$  may be shorted to DGND,  $V_{DD}$ ,  $V_{SS}$  and  $V_{CC}$  provided that the power dissipation of the package is not exceeded.
