1.0 Introduction

1.1 Description

The AU9362 is a single chip USB flash memory reader controller which supports the widely used flash memory cards such as Compact Flash (CF) card, Micro Drive (MD), Smart Media Card (SMC), XD Picture Card, Memory Stick (MS), Memory Stick Duo, Memory Stick PRO, Secure Digital (SD) and Multimedia Card (MMC). It can be used as removable storage disks in enormous data exchange applications between PC and PC or PC and various consumer electronic appliances.

The AU9362 reads digital contents saved on memory card that user captured with consumer electronic devices such as digital cameras, MP3 players, PDAs and mobile phones... etc.

In addition, AU9362 allows user to transfer information such as data, graphics, texts or digital images from one electronic device to another quickly and easily. With AU9362, users' experience will be further enhanced by the Plug-and-Play nature built into latest operation systems such as Windows 2000/XP and Mac OS X.

1.2 Features

- Support USB v1.1 specification and USB Device Class Definition for Mass Storage, Bulk-Transport v1.0
- Support Compact Flash (CF) v1.4 Specification
- Support Secure Digital (SD) v1.0 Specification.
- Support Memory Stick (MS) v1.3 Specification.
- Support Memory Stick PRO v1.0 Specification.
- Support Memory Stick ROM Format v1.0 Specification.
- Support Smart Media Card (SMC) Standard 2000 Specification.
- Support xD-Picture Card Format V1.0 Specification
- Support IBM Microdrive device.
- Work with default driver from Windows ME, Windows XP, Mac OS 9, and Mac OS X. Windows 98, Windows 2000 are supported by vendor driver from Alcor.
- Ping-pong FIFO implementation for concurrent bus operation
- Support multiple sectors transfer to 4GB to optimize performance
- Support optional external EEPROM for USB VID, PID and string customization
- Support multiple slot concurrent operation.
- Integrated power switch and power management circuit for each slot to meet USB 500uA power consumption during suspend with card in the slot.
- Runs at 12MHz, built-in 48 MHz PLL
- Built-in 3.3V regulator
- 64-pin LQFP package

2.0 Application Block Diagram

Following is the application diagram of a typical flash memory card reader using AU9362. By connecting the reader to a PC through USB bus, the AU9362 is acting as a bridge between the flash memory card from digital camera, MP3 player, PDA or mobile phone and PC.

Figure 2.1 Block Diagram

3.0 Operating Mode Selection

The Au9362 offers two operating modes. Mode 0 is used for SD/SMC/MS combo socket. While mode 1 is designed for single function socket. Mode 1 support xD card in a shared SMC socket.

Table 3.1 Mode Table

| Mode 0 (2SLOTSEL : 0) | | Mode 1 (2SLOTSEL : 1) | |

| Slot 1 | CF | Slot 1 | SD |
| | | Slot 2 | CF |
| Slot 2 | SD/SMC/MS | Slot 3 | SMC/XD |
| | | Slot 4 | MS |

4.0 Pin Assignment

The AU9362 is packed in 64-LQFP-form factor. The following figure shows signal name for each pin and the table in the following page describes each pin in detail.

6.5 Crystal Oscillator Circuit Setup for Characterization

The following setup was used to measure the open loop voltage gain for crystal oscillator circuits. The feedback resistor serves to bias the circuit at its quiescent operating point and the AC coupling capacitor, C_s , is much larger than C_1 and C_2 .

| T_{STO} | Storage temperature range | | -60 | +150 | °C |
| P_{TOT} | Power dissipation per package | | | | mW |

NOTES:

1. Stresses beyond those listed may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under "Recommended Operating Conditions" is not implied. Exposure to absolute maximum rated conditions for extended periods may affect device reliability.
2. The performance capability of a high performance integrated circuit in conjunction with its thermal environment can create junction temperatures which are detrimental to reliability. The maximum junction temperature of this integrated circuit should not exceed 150 °C.
3. The input and output voltage ratings may be exceeded if the input and output clamp current ratings are observed.

6.7 ESD Test Results

Test Description: ESD Testing was performed on a Zapmaster system using the Human-Body-Model (HBM) and Machine-Model (MM), according to MIL-STD 883 and EIAJ IC-121 respectively

- Human-Body-Model stresses devices by sudden application of a high voltage supplied by a 100pF capacitor through 1.5k-ohm resistance.
- Machine-Model stresses devices by sudden application of a high voltage supplied by a 200pF capacitor through very low (0 ohm) resistance.

Test circuit & condition

- Zap Interval: 1 second
- Number of Zaps: 3 positive and 3 negative at room temperature
- Criteria: I-V Curve Tracing

Table 6.9 ESD Data

| Model | Mode | S/S | Target | Results |
|-------|---------------|-----|--------|---------|
| HBM | Vdd, Vss, I/C | 15 | 6000V | PASS |
| MM | Vdd, Vss, I/C | 15 | 200V | PASS |

6.8 Latch-Up Test Results

Test Description: Latch-Up testing was performed at room ambient using an IMCS-4600 system which applies a stepped voltage to one pin per device with all other pins open except Vdd and Vss which were biased to 5Volts and ground respectively.

Testing was started at 5.0V (Positive) or 0V (Negative), and the DUT was biased for 0.5 seconds.

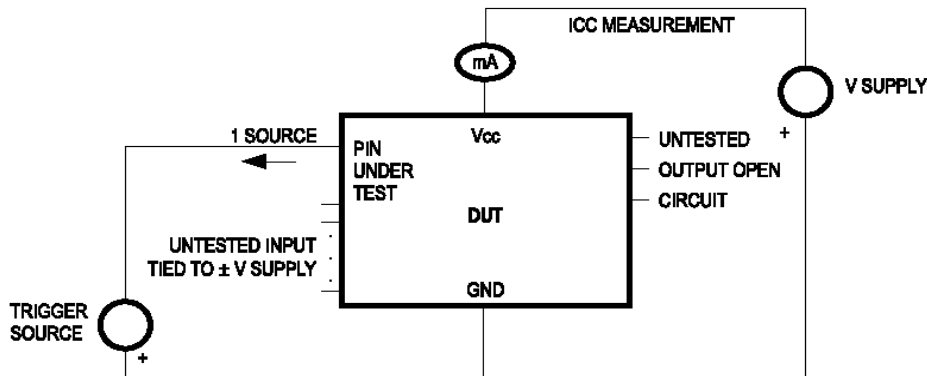

If neither the PUT current supply nor the device current supply reached the predefined limit (DUT=00mA, Icc=100mA), then the voltage was increased by 0.1Volts and the pin was tested again.

This procedure was recommended by the JEDEC JC-40.2 CMOS Logic standardization committee.
