# KYOCERA TOTAL HYBRID SYSTEM

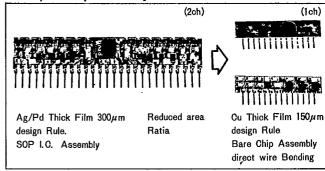

Kennera

T-62-05

- Features of KYOCERA'S Total Hybrid System
- Kyocera meets its customers' needs by capitalizing on its leading manufacturing and engineering capabilities to deliver consistently manufactured, and high reliability products
- 2) Vertical integration allows Kyocere to supply its customers with products such as alumina substrates, thick film printing, surface mount components, and hybrid IC's at any stage in their manufacture.
- 3) This vertical integration of leading-edge technology for each component allows for miniaturization of the finished hybrid, and provides for excellent high frequency response, and high reliability.

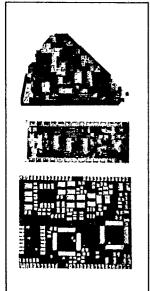

# Thick Film Printed Substrate Alumina Substrate

# THICK FILM PRINTED SUBSTRATES

Any type of thick film printed substrate can be achieved by utilizing Kyocera's own thick film manufacturing technology. Kyocera's advanced techniques allow for the printing of precious metals, such as Ag, Au, or Ag/Pd as well as nonprecious metals like Cu.

- Technology of Kyocora thick film printed substrate
- Laser cutting technology
   Dia 0.2mm hole
   ±0.25mm laser cutting tolerance
- 2) Printing technology
   150 micron design rule
   (pattern width and separation)
   0.2mm dia via hole
   metallization.
   Full printing of multi-layer

(pad, resistor and glass-layer)

Trimming technology
 High precision trimming
 Low resistance trimming High
 power resistance trimming

erance Application

High Reliability

On)

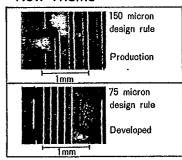

8mm VCR
Audio

er)

Gh

Car High Dense Assembling Expansion

### ■ New Theme

Kyocera's three years of experience in Cu paste technology has made higher conductor and component desity possible with the following capabilities:

- 75 micron design rule
- pad printing on isolation glass layer

## HYBRID IC'S

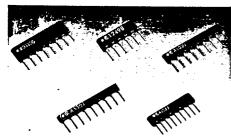

Kyocera hybrid i.c.'s can respond to a wide range of market requirements by utilizing a variety of in house components, high assembly technology and high precision trimming technology.

- Kyocera Hybrid IC Technology
- 1) Substrate Ceramic thick film substrate (Ag/Pd, Cu) Glass epoxy, Phenol substrate
- 2) Mounting Technology · Chip-on-board (direct wire bonding on copper high speed mounting)
- 3) Trimming Technology Pre-function trimming circuit by laser trimming (trimming of voltage, trimming of frequency)
- 4) Test Technology High speed screening by hi-rel linner tester
- Application
- 1) VCR, TV · Color, Brightness control, Video camera control module
- 2) Car Audio Noise-cancellor/multiplexor, Graphic Equalizer
- 3) Car Engine Room Various engine control circuit
- 4) Industrial · Computer peripheral, Telecommunication equipment. VCO (voltage control oscillator)

# THICK FILM RESISTOR NETWORKS (RD, MRD, SRD, TRO, SRS SERIES)

This series of conformal coated SIP resistor networks utilizes high reliability printed thick film resistors, laser trimmed to precise values.

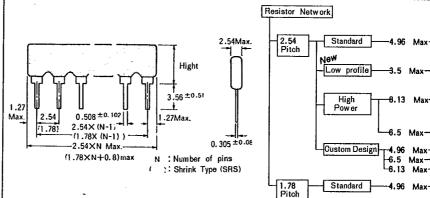

### ■ Nomenclature

SRD	SA	09	PC	104	J
①	2	3	4	<b>⑤</b>	6

- ①: Thick Film Resistor Network Profile
- 2: Circuit Type
- ("SRD series") (SA Circuit)
- 3 Number of Pins
- (9 Pins)

**■** Dimensions

- 4: Pitch of Pins
- (P:2.54mm, C:Center lead)
- (S:1.78mm)
- ⑤: Resistance
- (3 digit Coading  $(Unit : \Omega)$
- 6: Tolerance (J: ±5%)

■ Specifications

ITEM	RATING		
Rated power	125mW/element (at 70°C), 25mW/element(RN), 125mW×Number of elements/package (at 70°C)		
Maximum working voltage	150V		
Nominal resistance range	22Ω to 1MΩ (Option of sip.: 10 to 20Ω.)		
Resistance tolerance	F: ±1% (51Ω min.), - G: ±2% (22Ωmin.), J: ±5%		
Working temperature range	-55°O to +125°O		
Standard pin configuration	Sip.: 4 to 14 pine		

### ■ Standard Circuit Schematic
