

### Features

- Wide supply voltage range: 2.4V~5.5V
- Low power consumption
- 16-bit dynamic range
- Low total harmonic distortion
- Stereo audio outputs
- Data in 2's complement format, TTL
- Minimum number of external components is required
- Low clock jitter sensitivity
- Built-in highly efficient earphone driver
- 16-pin NSOP package

### Applications

- MP3 player
- CD/VCD ROM and player
- Satellite/cable STB
- Digital portable audio/video equipment

### General Description

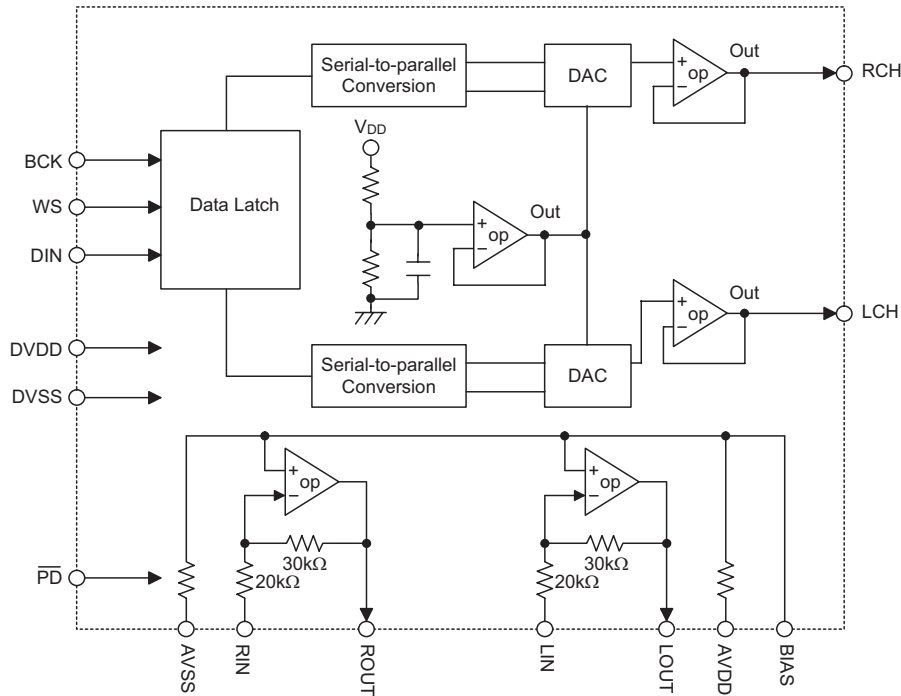

HT82V737 is a low power consumption stereo DAC with an integrated earphone driver. The device utilizes CMOS technology specially for portable MP3 players, VCD and CD machines.

It converts the 16 bits serial data into an analog output voltage by high precision D/A converter. It can be used with the Japanese input format: time multiplexed, two's complement, MSB first TTL level serial input. With its excellent frequency response characteristics, the

HT82V737 provides users a low cost means of implementing high quality audio voltage outputs. It also builds in a class AB stereo driver and some application circuits, thus, requires minimal external components.

The HT82V737 can support low voltage operation at 2.4V so it is very suitable for portable battery powered audio device. A low supply in power down mode current reduces power consumption. It is available in small 16-pin NSOP package.

### Block Diagram

**Pin Assignment**

**Pin Description**

Pin No.	Pin Name	I/O	Description
1	WS	I	Word select input
2	DIN	I	Data input
3	DVDD	—	Digital positive power supply
4	BIAS	—	Connect a capacitor to ground to increase half-supply stability
5	LCH	O	Left DAC analog output
6	LIN	I	Left inverting output
7	LOUT	O	Left earphone driver analog output
8	AVSS	—	Analog negative power supply, ground
9	AVDD	—	Analog positive power supply
10	ROUT	O	Right earphone driver analog output
11	RIN	I	Right inverting input
12	RCH	O	Right DAC analog output
13	NC	—	No connection
14	DVSS	—	Digital negative power supply, ground
15	$\overline{\text{PD}}$	I	When low, the HT82V737 is powered down
16	BCK	I	Bit serial clock input

**Absolute Maximum Ratings**

Supply Voltage ..... $V_{SS}-0.3V$  to  $V_{SS}+5.5V$       Storage Temperature ..... $-50^{\circ}\text{C}$  to  $125^{\circ}\text{C}$   
 Input Voltage ..... $V_{SS}-0.3V$  to  $V_{DD}+0.3V$       Operating Temperature ..... $-20^{\circ}\text{C}$  to  $70^{\circ}\text{C}$

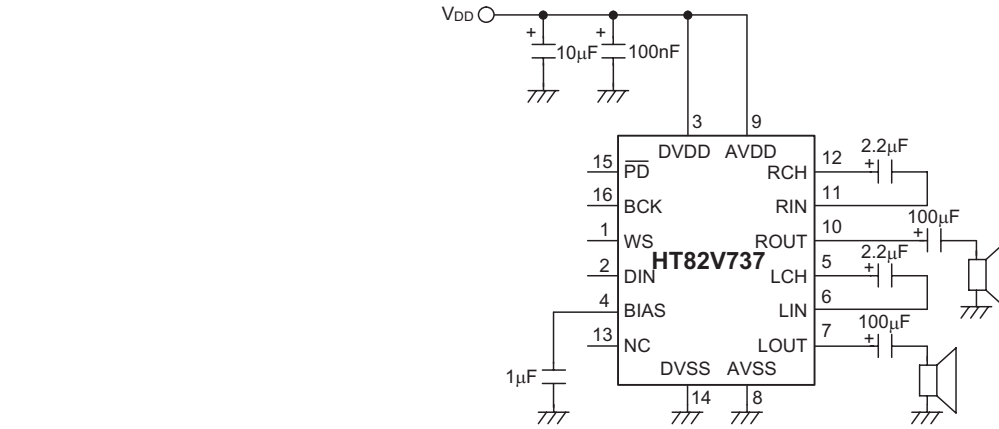

Note: These are stress ratings only. Stresses exceeding the range specified under "Absolute Maximum Ratings" may cause substantial damage to the device. Functional operation of this device at other conditions beyond those listed in the specification is not implied and prolonged exposure to extreme conditions may affect device reliability.

**Electrical Characteristics**
 $V_{SS}=0V$ ;  $f_i=1kHz$ ;  $R_L=32\Omega$ ;  $T_a=25^\circ C$ 

Symbol	Parameter	Test Conditions		Min.	Typ.	Max.	Unit
		V <sub>DD</sub>	Conditions				
<b>Supplies</b>
