

Two-channel switching regulator controller

BA9741F / BA9741FS

The BA9741F and BA9741FS are two-channel switching regulator controllers that use the PWM method. Both circuits can be used for DC to DC conversion for step-up, step-down, and inverting. The IC comes in a compact package, making it ideal for use in portable equipment.

● Applications

DC/DC converters for video cameras and notebook computers etc.

● Features

- 1) High-accuracy reference voltage circuit ($\pm 1\%$).
- 2) Timer-latch, short-circuit protection circuit
- 3) Miss-operation prevention circuit for low-voltage input.
- 4) Reference voltage with output (2.5V).
- 5) Rest period adjustment is possible over the entire duty range.
