

Octal buffer/line driver (3-State)**54ABT244****FEATURES**

- Octal bus interface
- 3-State buffers
- Output capability: 48mA/-24mA
- Latch-up protection exceeds 500mA per JEDEC JC40.2 Std 17
- ESD protection exceeds 2000V per MIL STD 883C Method 3015.6

DESCRIPTION

The 54ABT244 high-performance BiCMOS device combines low static and dynamic power dissipation with high speed and high output drive.

The 54ABT244 device is an octal buffer that is ideal for driving bus lines. The device features two Output Enables ($1OE$, $2OE$), each controlling four of the 3-State outputs.

NOTES:

1. Stresses beyond those listed may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
2. The performance capability of a high-performance integrated circuit in conjunction with its thermal environment can create junction temperatures which are detrimental to reliability. The maximum junction temperature of this integrated circuit should not exceed 150°C.
3. The input and output voltage ratings may be exceeded if the input and output current ratings are observed.
4. Not more than one output should be tested at a time, and the duration of the test should not exceed one second.
5. This is the increase in supply current for each input at 3.4V.
6. To accommodate tester limitations, I_{OZ} tests are tested with $V_{IH} = 3.0\text{V}$, but 2.0V V_{IH} is guaranteed.
7. C_{IN} and C_{OUT} are measured only for initial qualification or after any design or process changes which may affect capacitance.
