

REGULATING PULSE WIDTH MODULATORS

CURRENT MODE IP1844, IP2844, IP3844, IP1845, IP2845, IP3845

2

DESCRIPTION

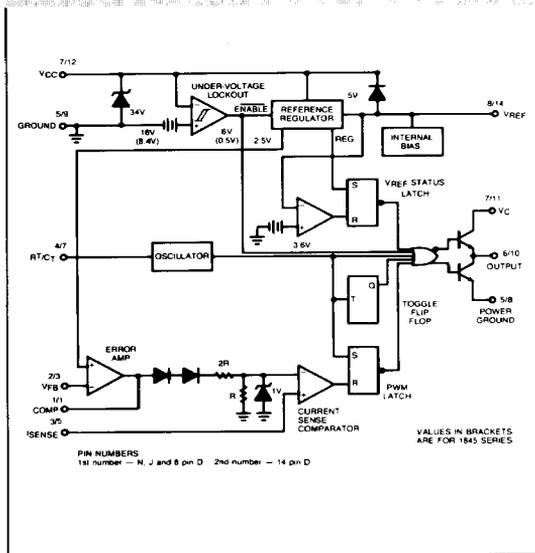

The IP1844 and IP1845 series of switching regulator control circuits contain all the functions necessary to implement off-line, current mode switching regulators, using a minimum number of external parts. Functions included are voltage reference, error amplifier, current sense comparator, oscillator, totem-pole output driver and under-voltage lockout circuitry. In addition there is a toggle flip-flop which blanks the output on every second clock pulse, thereby ensuring that the duty cycle never exceeds 50%.

Although pin compatible with the UC1844 and UC1845 series, Seagate Microelectronics has incorporated several improvements in the IP1844 and IP1845 series allowing tighter and more complete specification of electrical performance.

FEATURES

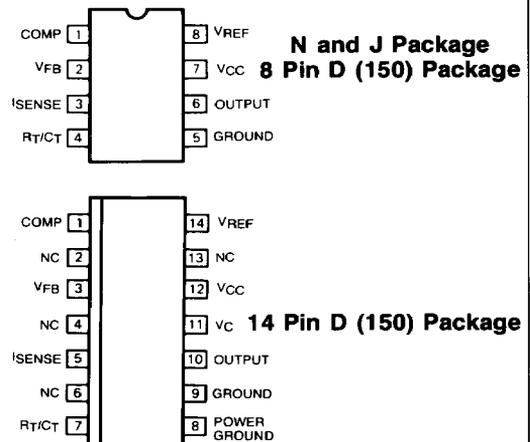

- Guaranteed $\pm 1\%$ reference voltage tolerance
- Guaranteed $\pm 10\%$ frequency tolerance
- Low start-up current ($< 500 \mu\text{A}$)
- Under voltage lockout with hysteresis
- Output state completely defined for all supply and input conditions
- Interchangeable with UC1844 and UC1845 series for improved operation
- 500 kHz Oscillator operation
250 kHz Output operation

REGULATING PULSE WIDTH MODULATORS

ABSOLUTE MAXIMUM RATINGS

Supply Voltage (+V_{CC}) (low impedance source)	+30V	Power Dissipation at T _A = +25°C (Note 1)	1000mW
Supply Voltage (V_{CC}) (I _{CC} < 30mA)	Self limiting	N and J Packages	
Output Current	+1A	T _C = +25°C (Note 2)	725mW
Output Energy (capacitive load)	5μJ	D Packages	
Analog Inputs (pins 2 and 3)	-0.3V to +V _{CC}	T _C = +25°C (Note 3)	2000mW
Error Amp Output Sink Current	10mA	N and J Packages	
		Storage Temperature Range	-65°C to +150°C
		Lead Temperature (Soldering, 10 seconds)	+300°C

Absolute maximum ratings are those values beyond which the safety of the device cannot be guaranteed. They are not meant to imply that the device should be operated at these limits. The electrical characteristics provide conditions for actual device operation.

RECOMMENDED OPERATING CONDITIONS (Note 4)

Supply Voltage (+V_{CC})	≤30V	Operating Ambient Temperature Range:	
Output Current	0 to +200mA	IP1844, IP1845	-55°C to +125°C
Analog Inputs (pins 2 and 3)	-0.3V to 3V	IP2844, IP2845	-25°C to +85°C
Error Amp Output Sink Current	0 to 2mA	IP3844, IP3845	0°C to +70°C

Note 1. Derate at 10 mW/°C, for N and J packages, for ambient temperatures above +50°C.

Note 2. Derate at 7.25 mW/°C for D packages, for ambient temperatures above +50°C.

Note 3. Derate at 16 mW/°C for case temperatures above +25°C.

Note 4. Range over which the device is functional and parameter limits are guaranteed.

ELECTRICAL CHARACTERISTICS

V_{CC} = 15V, f = 52kHz, R_T = 10k, C_T = 3.3nF unless otherwise specified (Note 6)

Parameter	Test Conditions	IP1844/IP1845 IP2844/IP2845			IP3844/IP3845			Units	
		Min	Typ	Max	Min	Typ	Max

V _{CC} Zener Voltage	I _{CC} = 25mA	● 30	34	40	30	34	40	V

The ● denotes the specifications which apply over the full operating temperature range, all others apply at T_J = 25°C unless otherwise specified.

Note 5. These parameters, although guaranteed over the recommended conditions, are not 100% tested in production.

Note 6. Adjust V_{CC} above start threshold before setting at required level.

Note 7. Parameter measured at trip point of latch with V_{PI}N 2 = 0V.

Note 8. Gain defined as

$$A = \frac{\Delta V_{PI1}}{\Delta V_{PI3}} \quad ; 0 \leq V_{PI3} \leq 0.8$$

REGULATING PULSE WIDTH MODULATORS

APPLICATIONS INFORMATION

Oscillator Waveforms and Maximum Duty Cycle

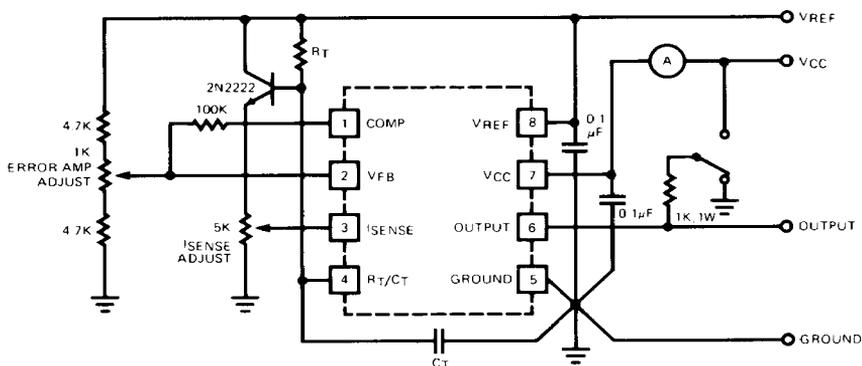

Oscillator timing capacitor, C_T is charged by V_{REF} through R_T and discharged by an internal current source. During the discharge time, the internal clock signal blanks the output to the low state. Selection of R_T and C_T therefore determines both oscillator frequency and maximum duty cycle. Charge and discharge times are determined by the formulas:

$$t_c \approx 0.55 R_T C_T$$

$$t_d \approx R_T C_T \ln \left(\frac{0.063 R_T - 2.3}{0.063 - 4} \right)$$

$$\text{Frequency, then is: } f = (t_c + t_d)^{-1} \quad \text{For } R_T > 5k, f \approx \frac{1.8}{R_T C_T}$$

Open-Loop Laboratory Test Fixture

High peak current associated with capacitive loads necessitate careful grounding techniques. Timing and bypass capacitors should be connected close to pin 5 in a single point ground. The transistor and 5K potentiometer are used to sample the oscillator waveform and apply an adjustable ramp to pin 3.
