WEDC's ruggedized plastic 512Kx8 SRAM that allows the user to capitalize on the cost advantage of using a plastic component while not sacrificing all of the reliability available in a full military device.

Extended temperature testing is performed with the test patterns developed for use on WEDC's fully compliant 512Kx8 SRAMs. WEDC fully characterizes devices to determine the proper test patterns for testing at temperature extremes. This is critical because the operating characteristics of a device change when it is operated beyond the commercial temperature range. Using commercial methods will not guarantee a device that operates reliably in the field at temperature extremes. Users of WEDC's ruggedized plastic benefit from WEDC's extensive experience in characterizing SRAMs for use in military systems.

WEDC's ruggedized plastic SOJ is footprint compatible with WEDC's full military ceramic 36 pin SOJ.
