Notes:

1. Luminous intensity is measured with a light sensor and filter combination that approximates the CIE eye-response curve.
2. Luminous intensity rank classified products support two ranks.
3. $\theta^{1/2}$ is the off-axis angle at which the luminous intensity is half the axial luminous intensity.
4. Iv classification code is marked on each packing bag.
5. The Iv guarantee should be added $\pm 15\%$.
6. The dominant wavelength, λd is derived from the CIE Chromaticity Diagram and represents the single wavelength which defines the color of the device.
