

To our customers,

Old Company Name in Catalogs and Other Documents

On April 1st, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Renesas Electronics website: <http://www.renesas.com>

April 1st, 2010
Renesas Electronics Corporation

Issued by: Renesas Electronics Corporation (<http://www.renesas.com>)

Send any inquiries to <http://www.renesas.com/inquiry>.

Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: “Standard”, “High Quality”, and “Specific”. The recommended applications for each Renesas Electronics product depends on the product’s quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as “Specific” without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as “Specific” or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is “Standard” unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
 - “Standard”: Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
 - “High Quality”: Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
 - “Specific”: Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) “Renesas Electronics” as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) “Renesas Electronics product(s)” means any product developed or manufactured by or for Renesas Electronics.

MOS INTEGRATED CIRCUIT

μ PD17P203A, 17P204

4-BIT SINGLE-CHIP MICROCONTROLLER WITH STATIC RAM AND 3-CHANNEL TIMER FOR INFRARED REMOTE CONTROLLER

DESCRIPTION

μ PD17P203A and μ PD17P204 are variations of μ PD17203A and μ PD17204 respectively and are equipped with a one-time PROM instead of an internal mask ROM.

μ PD17P203A and μ PD17P204 are suitable for evaluating a program when developing μ PD17203A and μ PD17204 systems respectively because the program can be written by the user.

When reading this document, also refer to the μ PD17203A and μ PD17204 Data Sheets.

FEATURES

- 17K architecture: General-purpose register format
- Pin-compatible (except for PROM programming function): μ PD17P203A with μ PD17203A
 μ PD17P204 with μ PD17204
- Internal one-time PROM: 4096 x 16 bits (μ PD17P203A)
7936 x 16 bits (μ PD17P204)
- Static RAM: 16 Kbits (μ PD17P203A)
8 Kbits (μ PD17P204)
- Power supply voltage: 2.9 to 5.5 V (at $T_A = -20$ to $+75^\circ\text{C}$, $f_x = 4\text{MHz}$)
2.0 to 5.5 V (at $T_A = -20$ to $+75^\circ\text{C}$, $f_{XT} = 32\text{kHz}$)

The features of each product is shown in the following table:

Item	μ PD17P203A-001 μ PD17P204-001	μ PD17P203A-002 μ PD17P204-002	μ PD17P203A-003 μ PD17P204-003	μ PD17203A μ PD17204
Pull-up resistor of RESET pin	Provided	Not provided	Not provided	On request (mask option)
Pull-up resistor of P0A and P0B pins		Provided		
Main clock oscillator circuit		Not provided	Provided	
Subclock oscillator circuit			Provided	

μ PD17P203A and μ PD17P204 are different from μ PD17203A and μ PD17204 respectively in the power supply voltage and the operating ambient temperature. Therefore, use μ PD17P203A and μ PD17P204 only for the system evaluation.

This document explains μ PD17P204 as a typical product where no specification is made.

The information in this document is subject to change without notice.

ORDERING INFORMATION

Part Number	Package
μ PD17P203AGC-001-3BH	52-pin plastic QFP (14 × 14 mm)
μ PD17P203AGC-002-3BH	52-pin plastic QFP (14 × 14 mm)
μ PD17P203AGC-003-3BH	52-pin plastic QFP (14 × 14 mm)
μ PD17P204GC-001-3BH	52-pin plastic QFP (14 × 14 mm)
μ PD17P204GC-002-3BH	52-pin plastic QFP (14 × 14 mm)
μ PD17P204GC-003-3BH	52-pin plastic QFP (14 × 14 mm)

PIN CONFIGURATION (TOP VIEW)

(1) Normal operation mode

- | | | | |
|------------------------------------|---|-------------|---------------------------------|
| AMPIN- | : Operational amplifier input | RESET | : Reset input |
| AMPOUT | : Operational amplifier output | SCK | : Serial clock input/output |
| CMPIN+ | : Comparator input | SI | : Serial data input |
| CMPOUT | : Comparator output | SO | : Serial data output |
| GND ₀ -GND ₅ | : Ground | TM0IN | : Timer 0 input |
| INT | : External interrupt input | TM0OUT | : Timer 0 output |
| LED | : Remote controller transmission output indicator | TM1OUT | : Timer 1 output |
| P0A ₀ -P0A ₃ | : I/O port 0A | TM2OUT | : Timer 2 output |
| P0B ₀ -P0B ₃ | : I/O port 0B | VDD | : Power supply |
| P0C ₀ -P0C ₃ | : I/O port 0C | VREG | : Voltage regulator output |
| P0D ₀ -P0D ₃ | : I/O port 0D | VREF | : Reference voltage output |
| P1A ₀ -P1A ₃ | : I/O port 1A | VXRAM | : Static RAM (XRAM) powersupply |
| P1B ₀ -P1B ₃ | : I/O port 1B | WDOUT | : Overrun detection output |
| P1C ₀ -P1C ₃ | : I/O port 1C | XIN, XOUT | : Main clock oscillation use |
| REM | : Remote controller transmission output | XTIN, XTOUT | : Subclock oscillation use |

(2) PROM programming mode

Caution Those enclosed in parentheses indicate the processing of the pins not used in PROM programming mode.

L : Ground these pins through a resistor (470Ω).

Open: Do not connect anything to these pins.

CLK : PROM clock input

D0-D7 : PROM data I/O

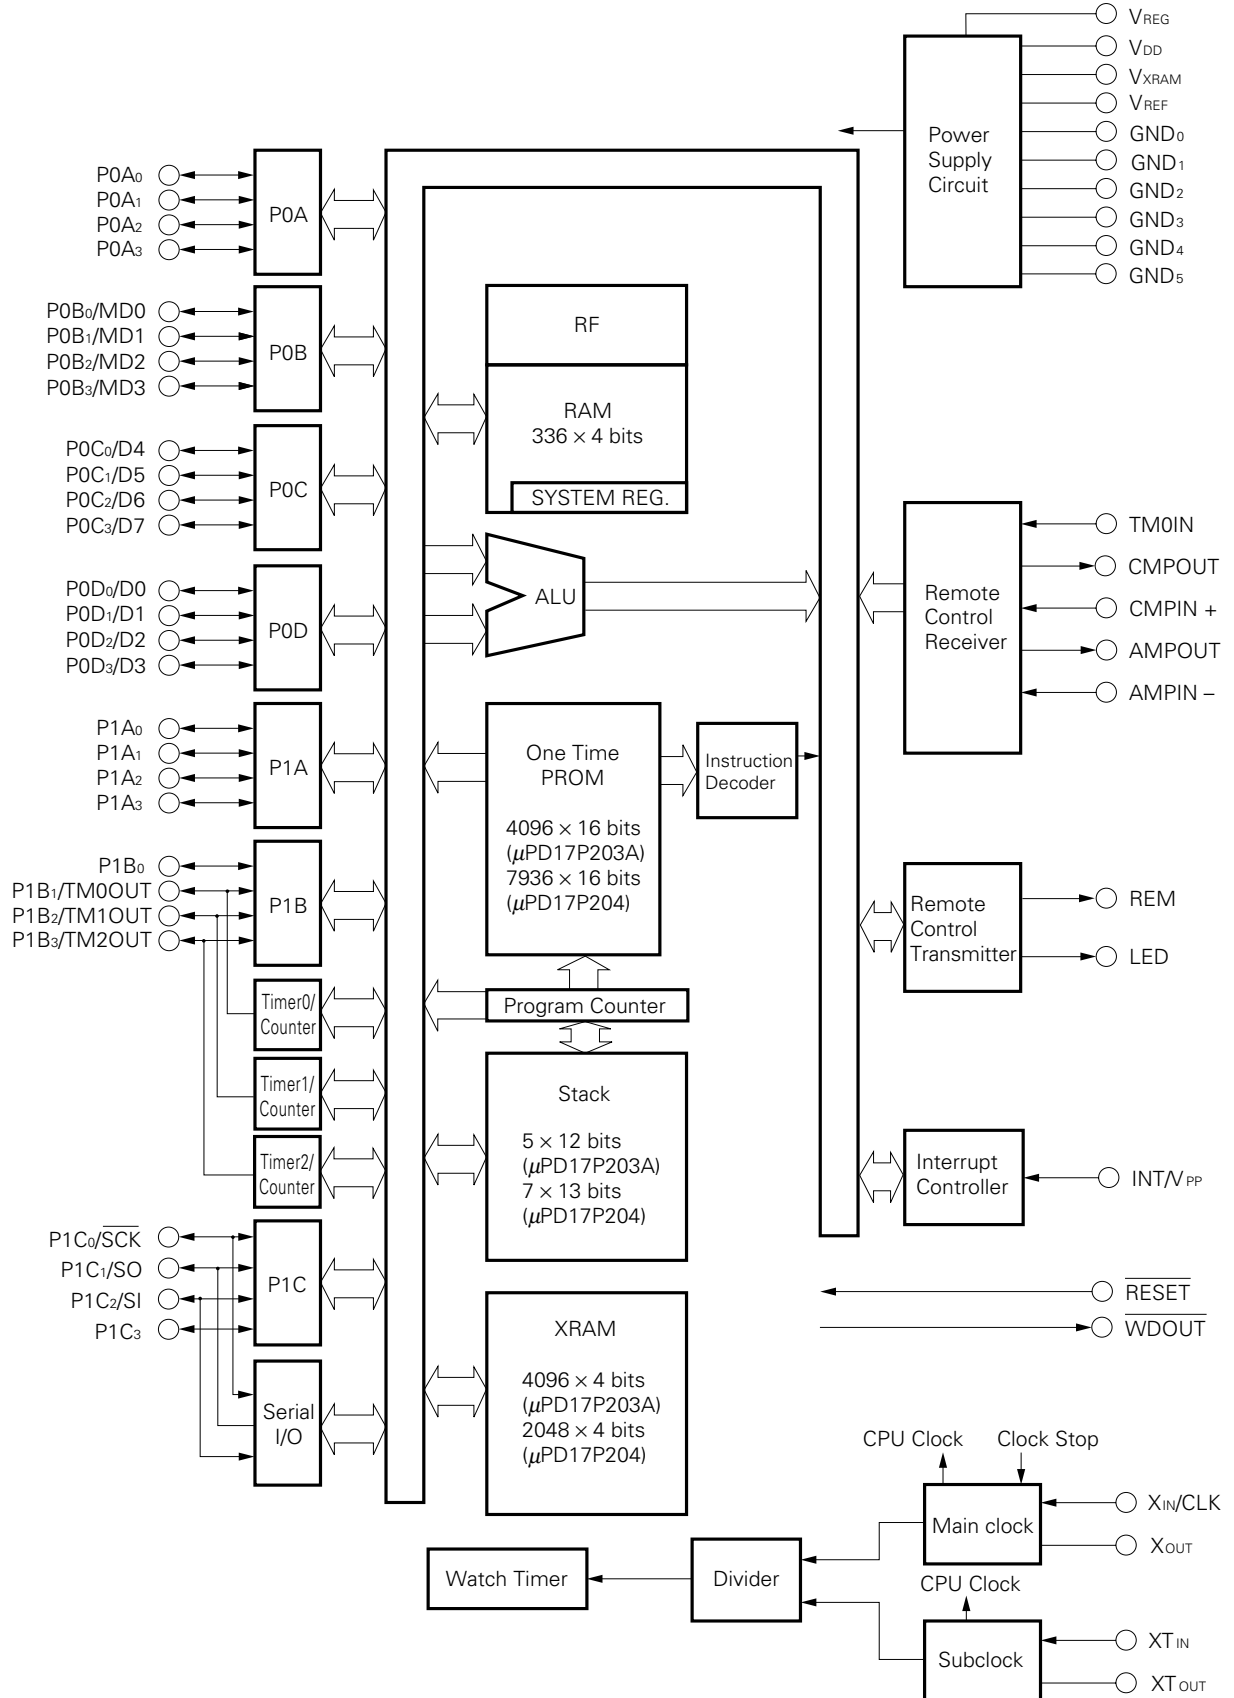

GND, GND₀-GND₅ : Ground

MD0-MD3 : PROM mode selection

V_{DD} : Power supply

V_{PP} : Program power supply

1. PIN FUNCTIONS

1.1 NORMAL OPERATION MODE

(1/2)

Pin No.	Symbol	Function	Output Format	At Reset
1	LED	Outputs NRZ signal in synchronization with infrared remote controller signal. Remains low while remote control carrier is output	CMOS push-pull	High-level output
2	REM	Outputs active-high infrared remote control signal	CMOS push-pull	Low-level output
3	V _{XRAM}	Supplies power to XRAM	–	–
4	V _{DD}	Positive power	–	–
5	X _{IN}	Connect 4-MHz ceramic oscillator for main clock oscillation	–	(Oscillation stop)
6	X _{OUT}			
7	GND ₀	Ground	–	–
8	RESET	Inputs low-active system reset signal. While this pin remains low level, oscillation of main clock stops. Pull-up resistor can also be connected by mask option (μPD17P203A-001 and μPD17P204-001 only).	–	–
9	WDOUT	Outputs signal for detecting overrun. This pin outputs a low-level when an overflow in the watchdog timer or an overflow/underflow in the stack is detected. Connect this pin to the RESET pin.	N-ch open drain	High impedance
10	XT _{IN}	Connect 32-kHz crystal oscillator across these pins. When option not using subclock is selected, main clock is divided and is supplied to watch timer.	–	(Oscillation)
11	XT _{OUT}			
12	V _{REG}	Outputs signal from voltage regulator for subclock oscillator circuit. Connect external 0.1-μF capacitor.	–	–
13	GND ₅	Ground	–	–
14	GND ₁	Ground of operation amplifier	–	–
15	AMPIN-	Inverted input of operational amplifier	–	Input
16	GND ₂	Ground of operational amplifier	–	–
17	AMPOUT	Output of operational amplifier	–	Output
18	V _{REF}	Outputs reference voltage of 1/2V _{DD} . Connect external 0.1-μF capacitor.	–	–
19	CMPIN+	Non-inverted input of comparator. Output of this comparator can be obtained from CMPOUT.	–	Input
20	GND ₃	Ground of operational amplifier	–	–

★

Remark GND₁-GND₃ are the ground pins of the operational amplifier.
Keep all these pins at the same potential to stabilize the operation of the operational amplifier.

(2/2)

Pin No.	Symbol	Function	Output Format	At Reset
21	CMPOUT	Comparator output. Externally connect CMPOUT and TM0IN when using microcontroller as teaching remote controller	–	Output
22	TM0IN	Clock input to timer 0. Input clock is sampled by internal clock and then input to envelope signal generator circuit, as well as to timer 0. By using timer 0 with timer 1, frequency of clock input to this pin can be measured.	–	Input
23	INT	External interrupt signal input pin	–	Input
24 to 27	P0A ₀ to P0A ₃	Constitute 4-bit I/O port, which can be set in input or output mode in 4-bit units. Pull-up resistor can be connected by mask option (μPD17P203A-001, -002 and μPD17P204-001, -002 only). When one or more of these pins goes low in standby mode standby mode is released.	CMOS push-pull	Input
28 to 31	P0B ₀ to P0B ₃			
32 to 36	P0C ₀ to P0C ₃	Constitute 4-bit I/O port, which can be set in input or output mode in 4-bit units.	N-ch open drain	Input
33	GND ₄	Ground	–	–
37 to 40	P0D ₀ to P0D ₃	Constitute 4-bit I/O port, which can be set in input or output mode in 4-bit units.	N-ch open drain	Input
41 to 44	P1A ₀ to P1A ₃	Constitute 4-bit I/O port, which can be set in input or output mode in bitwise. Pull-up resistor can be connected through program.	N-ch open drain	Input
45 to 48	P1B ₀ P1B ₁ / TM0OUT P1B ₂ / TM1OUT P1B ₃ / TM2OUT	Port 1B or timer output • P1B ₀ -P1B ₃ - 4-bit I/O port - Can be set in input/output mode in bitwise - Pull-up resistor can be connected through program • TM0OUT-TM2OUT - Timer output	N-ch open drain	Input (P1B ₀ -P1B ₃)
49 to 52	P1C ₀ / <u>SCK</u> P1C ₁ / <u>SO</u> P1C ₂ / <u>SI</u> P1C ₃	Port 1C or serial interface I/O • P1C ₀ -P1C ₃ - 4-bit I/O port - Can be set in input/output mode in bitwise • <u>SCK</u> , <u>SO</u> , <u>SI</u> - <u>SCK</u> : serial clock I/O - <u>SO</u> : serial clock data output - <u>SI</u> : serial clock data input	CMOS push-pull	Input (P1C ₀ -P1C ₃)

Caution For “A” standard products, note that standby mode is released when one or more of P0C and P0D pins goes high in standby mode.

1.2 PROM PROGRAMMING MODE

Pin No.	Symbol	Function	Output Format	At Reset			
3 7 13 14 16 20 33	GND GND ₀ GND ₅ GND ₁ GND ₂ GND ₃ GND ₄	Ground	-	-			
4	V _{DD}				Positive power	-	-
5	CLK				Address updating clock input	-	Input
23	V _{PP}				Supplies program voltage. Apply 12.5V to this pin	-	-
28 to 31	MD ₀ to MD ₃				Selects PROM programming mode	-	Input
32, 34 to 36	D ₄ to D ₇				8-bit data I/O	CMOS push-pull	Input
37 to 40	D ₀ to D ₃						

1.3 PIN I/O CIRCUITS

This section shows the I/O circuits of the μPD17P204 pins in simplified schematic diagrams.

(1) P0A₀-P0A₃, P0B₀/MD₀-P0B₃/MD₃

Note μPD17P203A-001, -002 and μPD17P204-001, -002 only.

(2) P0C0/D4-P0C3/D7, P0D0/D0-P0D3/D3

(3) P1A0-P1A3, P1B0-P1B3/TM2OUT

(4) P1C₀/ $\overline{\text{SCK}}$ -P1C₃

(5) $\overline{\text{RESET}}$

Note μ PD17P203A-001 and μ PD17P204-001 only

★ 1.4 PROCESSING OF UNUSED PINS

The following are recommended to process unused pins.

Table 1-1. Processing of Unused Pins

Pin	Recommended Connection
INT, TM0IN	Connect to V _{DD} or GND
P0A ₀ -P0A ₃ , P0B ₀ -P0B ₃	Input: Connect each pin to V _{DD} through resistor Output: Open (high-level output)
P0C ₀ -P0C ₃ , P0D ₀ -P0D ₃ P1A ₀ -P1A ₃ , P1B ₀ -P1B ₃	Input: Connect each pin to V _{DD} or GND through resistor Output: Open (low-level output)
P1C ₀ -P1C ₃	Input: Connect each pin to V _{DD} or GND through resistor Output: Open
LED	Open
REM	Open
WDO _{UT}	Connect to GND
X _{IN}	
X _{OUT}	Connect to V _{DD}
XT _{IN}	Connect to GND
XT _{OUT}	Connect to V _{REG}
AMPIN ₋	Connect to GND or AMPOUT
AMPOUT, CMPOUT	Open
CMPIN ₊	Connect to GND
V _{REF}	Open

1.5 NOTES ON USING $\overline{\text{RESET}}$ AND INT PINS (NORMAL OPERATION MODE ONLY)

★

In addition to the functions shown in **1. PIN FUNCTIONS**, the $\overline{\text{RESET}}$ and INT pins also have a function to set a test mode (for IC testing) in which the internal operations of the μ PD17P204 are tested.

When a voltage higher than V_{DD} is applied to either of these pins, the test mode is set. This means that, even during normal operation, the μ PD17P204 may be set in the test mode if a noise exceeding V_{DD} is applied.

For example, if the wiring length of the $\overline{\text{RESET}}$ or INT pin is too long, noise superimposed on the wiring line of the pin may cause the above problem.

Therefore, keep the wiring length of these pins as short as possible to suppress the noise; otherwise, take noise preventive measures as shown below by using external components.

- Connect diode with low V_F between V_{DD} and $\overline{\text{RESET}}$ /INT pin

- Connect capacitor between V_{DD} and $\overline{\text{RESET}}$ /INT pin

2. DIFFERENCES BETWEEN MASK ROM PRODUCTS AND ONE-TIME PROM PRODUCTS

The μPD17P203A and μPD17203 are identical in the CPU functions and internal hardware peripherals except for that the μPD17P204 is provided with a PROM, which can be written by the user, in the place of the mask ROM of the μPD17204. The only differences between the two microcontrollers are therefore the program memory and mask option. The relation between the μPD17P204 and μPD17204 is the same as the relation between the μPD17P203A and μPD17203. **Note that the μPD17P203A and μPD17P204 is slightly different from the μPD17203A and μPD17204 respectively in electrical characteristics, such as supply voltage and supply current.** The following shows the differences between μPD17P203A and μPD17203A; μPD17P204 and μPD17204.

For the CPU functions and internal hardware peripherals of the μPD17203A and μPD17P204, therefore, refer to the Data Sheet of the μPD17203A and μPD17204.

Item \ Product	μPD17P203A-001	μPD17P203A-002	μPD17P203A-003	μPD17203A

Package	52-pin plastic QFP			

Note For details on the power supply voltage, refer to **4. ELECTRICAL SPECIFICATIONS**.

3. ONE-TIME PROM (PROGRAM MEMORY) WRITING, READING, AND VERIFICATION

The program memory of 4096 x 16 bits (μPD17P203A) and 7936 x 16 bits (μPD17P204) one-time PROM are provided.

The following table lists the pins to be used for this PROM writing, reading or verification.

In PROM mode, no address input pin is used. Instead, the address is updated by the clock for input from the CLK pin.

Pin Name	Function
V _{PP}	Applies program voltage.
CLK	Inputs address update clock.
MD0-MD3	Selects operation mode.
D0-D7	Inputs and outputs 8-bit data.

3.1 OPERATION MODE FOR WRITING, READING, AND VERIFICATION OF PROGRAM MEMORY

If +6 V is applied to the V_{DD} and +12.5 V to the V_{PP} pin after μPD17P204 has been placed in the reset status for a fixed time (V_{DD} = 5V, $\overline{\text{RESET}} = 0\text{V}$), μPD17P204 enters program memory write, read, or verify mode. The MD0 to MD3 pins are used to set the operation modes listed in the following table. Leave the pins not used for program memory writing, reading, or verification open or ground through pull-down resistors.

Operating Mode Specification						Operating Mode
V _{PP}	V _{DD}	MD0	MD1	MD2	MD3	
+12.5 V	+6 V	H	L	H	L	Program memory address 0 clear mode
		L	H	H	H	Write mode
		L	L	H	H	Read/verify mode
		H	x	H	H	Program inhibit mode

x: L or H

3.2 PROGRAM MEMORY WRITE PROCEDURE

The program memory write procedure is as follows. High-speed program memory write is possible.

- (1) Ground the unused pins through pull-down resistors. The CLK pin must be low.
- (2) Supply 5 V to the V_{DD} pin. The V_{PP} pin must be low.
- (3) After waiting for 10 microseconds, supply 5 V to the V_{PP} pin.
- (4) Operate the MD0 to MD3 pins to set program memory address 0 clear mode.
- (5) Supply 6 V to the V_{DD} pin and 12.5 V to the V_{PP} pin.
- (6) Set program inhibit mode.
- (7) Write data in 1-millisecond write mode.
- (8) Set program inhibit mode.
- (9) Set verify mode. If data has been written connectly, proceed to step (10). If data has not yet been written, repeat steps (7) to (9).
- (10) Write additional data for (the number of times data was written (X) in steps (7) to (9)) times 1 milliseconds.
- (11) Set program inhibit mode.
- (12) Supply a pulse to the CLK pin four times to update the program memory address by 1.
- (13) Repeat steps (7) to (12) to the last address.
- (14) Set program memory address 0 clear mode.
- (15) Change the voltages of V_{DD} and V_{PP} pins to 5 V.
- (16) Turn off the power supply.

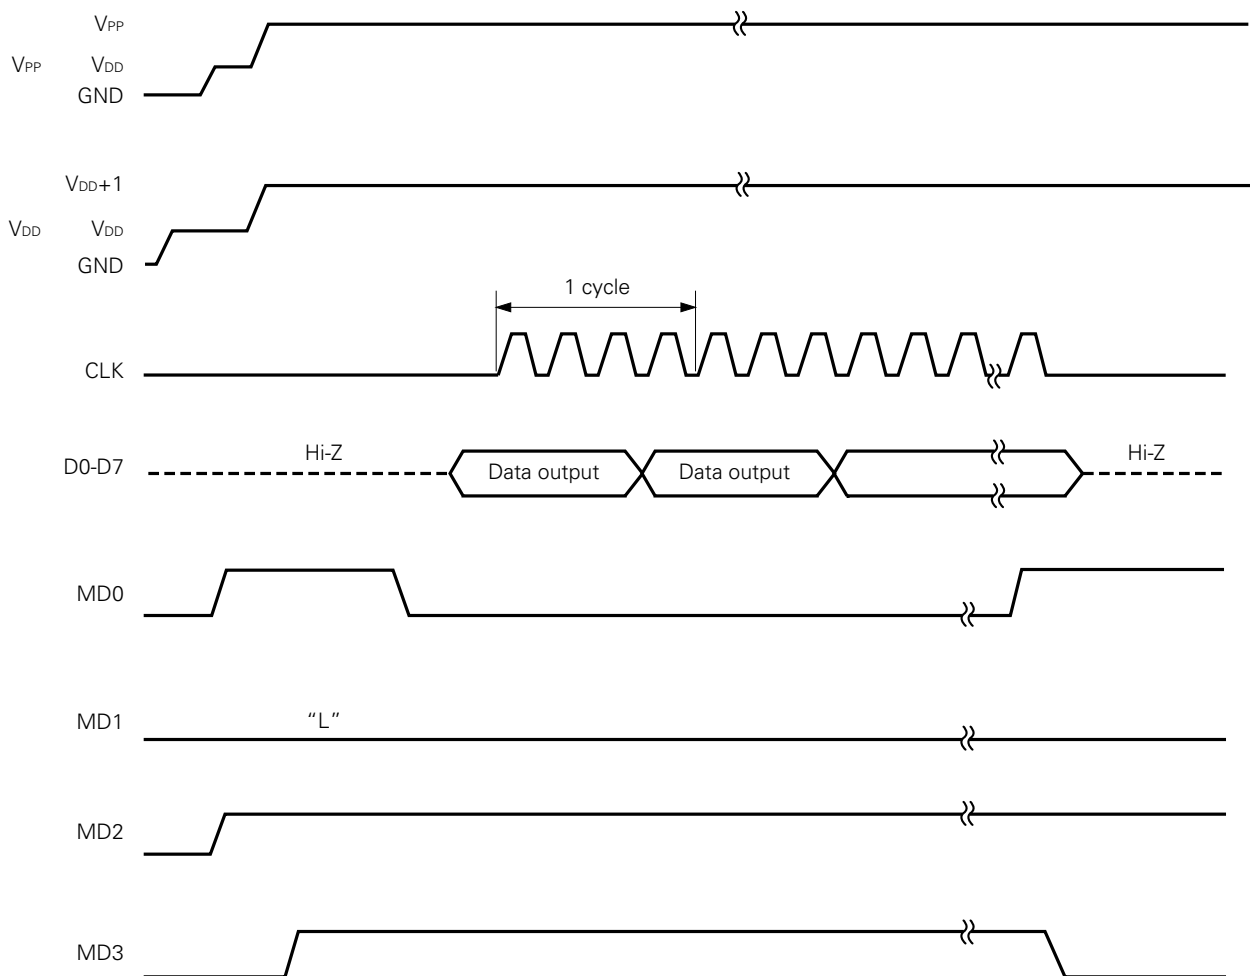

Steps (2) to (12) are illustrated below.

3.3 PROGRAM MEMORY READ PROCEDURE

- (1) Ground the unused pins through pull-down resistors. The CLK pin must be low.
- (2) Supply 5 V to the V_{DD} pin. The V_{PP} pin must be low.
- (3) After waiting for 10 microseconds, supply 5 V to the V_{PP} pin.
- (4) Operate the MD0 to MD3 pins to set program memory address 0 clear mode.
- (5) Supply 6 V to the V_{DD} pin and 12.5 V to the V_{PP} pin.
- (6) Set program inhibit mode.
- (7) Set verify mode. Data of each address is sequentially output each time a clock pulse is input to the CLK pin four times.
- (8) Set program inhibit mode.
- (9) Set program memory address 0 clear mode.
- (10) Change the voltages of V_{DD} and V_{PP} pins to 5 V.
- (11) Turn off the power supply.

Steps (2) to (9) are illustrated below.

4. ELECTRICAL SPECIFICATIONS

ABSOLUTE MAXIMUM RATINGS (T_A = 25°C)

Item	Symbol	Conditions	Ratings	Unit	
Supply voltage	V _{DD}		-0.3 to +7.0	V	
Input voltage	V _I		-0.3 to V _{DD} + 0.3	V	
High-level output current	I _{OH1}	REM pin	Peak value	-30	mA
	I _{OH2}		Effective value ^{Note}	-20	mA
	I _{OH3}	1 pin (except for REM pin)	Peak value	-7.5	mA
	I _{OH4}		Effective value ^{Note}	-5.0	mA
	I _{OH5}	Total (except for REM pin)	Peak value	-22.5	mA
	I _{OH6}		Effective value ^{Note}	-15.0	mA
Low-level output current	I _{OL1}	1 pin	Peak value	7.5	mA
	I _{OL2}		Effective value ^{Note}	5.0	mA
	I _{OL3}	Total	Peak value	30	mA
	I _{OL4}		Effective value ^{Note}	20	mA
Operating ambient temperature	T _A		-20 to +75	°C	
Storage temperature	T _{stg}		-40 to +125	°C	

Note Effective value = Peak value × √Duty

Caution Even if one of the parameters exceeds its absolute maximum rating even momentarily, the quality of the product may be degraded. The absolute maximum rating therefore specifies the upper or lower limit of the value at which the product can be used without physical damages. Be sure not to exceed or fall below this value when using the product.

RECOMMENDED OPERATING RANGE (T_A = -20 to +75°C)

Item	Symbol	Conditions	MIN.	TYP.	MAX.	Unit
Supply voltage	V _{DD1}	When the system clock is f _x = 4 MHz, T _A = -20 to 55°C	2.7	3.0	5.5	V
	V _{DD2}	When the system clock is f _x = 4 MHz	2.9	3.0	5.5	V
	V _{DD3}	When the system clock is f _x = 6 MHz, T _A = -20 to 50°C	4.75	5.0	5.5	V
	V _{DD4}	When the system clock is f _{XT} = 32 kHz	2.0	3.0	5.5	V
Main clock oscillation frequency	f _x		1.0	4.0	8.0	MHz
Subclock oscillation frequency	f _{XT}			32.768		kHz

CAPACITANCE (T_A = 25°C, V_{DD} = 0 V)

Item	Symbol	Conditions	MIN.	TYP.	MAX.	Unit
Input capacitance	C _{IN}	INT, $\overline{\text{RESET}}$ pins			10	pF
	C _{PIN}	Other than INT, $\overline{\text{RESET}}$ pins			10	pF

DC CHARACTERISTICS

(V_{DD} = V_{XRAM} = 3 V, T_A = -20 to +75°C, f_X = 4 MHz, f_{XT} = 32 kHz)

Item	Symbol	Conditions		MIN.	TYP.	MAX.	Unit
High-Level Input Voltage	V _{IH1}	RESET, INT pins		2.4		3.0	V
	V _{IH2}	Other than RESET, INT pins		2.1		3.0	V
Low-Level Input Voltage	V _{IL1}	RESET, INT pins		0		0.6	V

XRAM Supply Current	I _{XRAM1}	Operation mode, V _{XRAM} = 3 V		3.0	5.0	7.0	μA
	I _{XRAM2}	HALT mode, V _{XRAM} = 3 V, T _A = 25°C			0.2	1.0	μA

★

XRAM LOW SUPPLY VOLTAGE DATA HOLDING CHARACTERISTICS

($T_A = -20$ to $+75^\circ\text{C}$, $V_{DD} \leq V_{XRAMDR}$)

Item	Symbol	Conditions	MIN.	TYP.	MAX.	Unit
Data Holding Voltage	V_{XRAMDR}		1.3		5.5	V

DC PROGRAMMING CHARACTERISTICS

($T_A = 25^\circ\text{C}$, $V_{DD} = 6.0 \pm 0.25$ V, $V_{PP} = 12.5 \pm 0.3$ V)

Item	Symbol	Conditions	MIN.	TYP.	MAX.	Unit
High-Level Input Voltage	V_{IH1}	Other than CLK	$0.7 V_{DD}$		V_{DD}	V
	V_{IH2}	CLK	$V_{DD} - 0.5$		V_{DD}	V
Low-Level Input Voltage	V_{IL1}	Other than CLK	0		$0.3 V_{DD}$	V
	V_{IL2}	CLK	0		0.4	V
Input Leakage Current	I_{LI}	$V_{IN} = V_{IL}$ or V_{IH}			10	μA
High-Level Output Voltage	V_{OH}	$I_{OH} = -1$ mA	$V_{DD} - 1.0$			V
Low-Level Output Voltage	V_{OL}	$I_{OL} = 1.6$ mA			0.4	V
V_{DD} Supply Current	I_{DD}				30	mA
V_{PP} Supply Current	I_{PP}	MD0 = V_{IL} , MD1 = V_{IH}			30	mA

- Cautions**
1. V_{PP} must not exceed +13.5 V, including the overshoot.
 2. Apply V_{DD} before V_{PP} and disconnect it after V_{PP} .

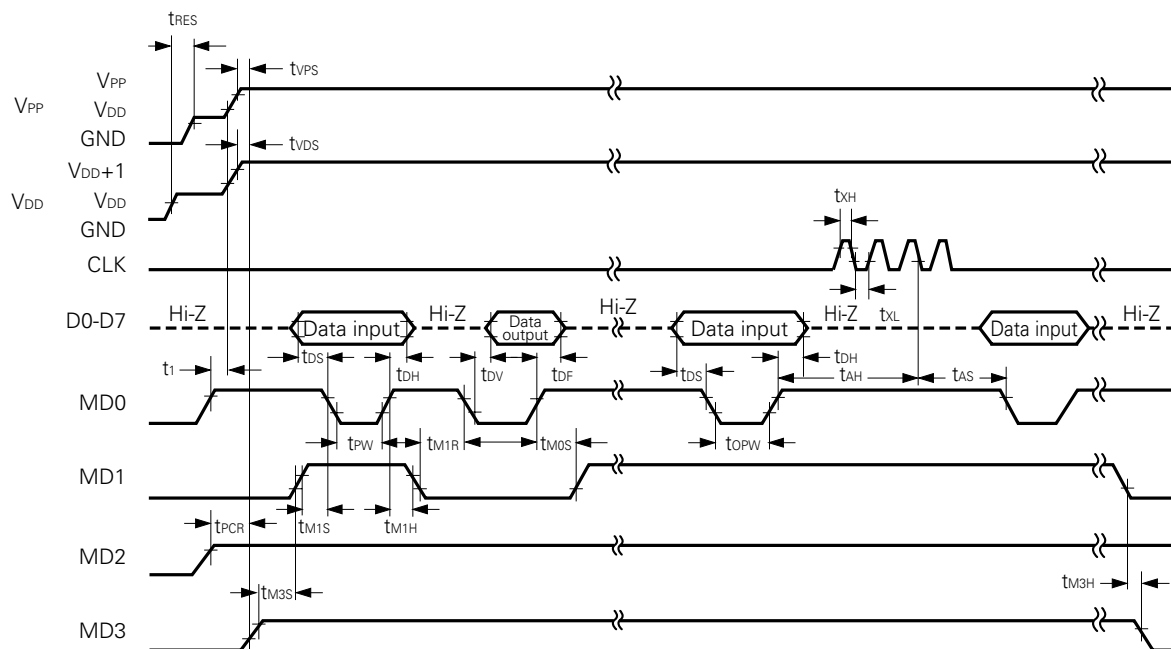

AC PROGRAMMING CHARACTERISTICS

(T_A = 25°C, V_{DD} = 6.0±0.25 V, V_{PP} = 12.5±0.3 V)

★ 6. RECOMMENDED SOLDERING CONDITIONS

Soldering must be performed under the following conditions.

For details of recommended conditions for surface mounting, refer to information document “Semiconductor device mounting technology manual” (IEI-1207).

For other soldering methods, please consult with NEC personnel.

Table 6-1. Soldering Conditions of Surface Mount Type

μPD17P203AGC-001-3BH : 52-pin plastic QFP (14 × 14 mm)

μPD17P203AGC-002-3BH : 52-pin plastic QFP (14 × 14 mm)

μPD17P203AGC-003-3BH : 52-pin plastic QFP (14 × 14 mm)

μPD17P204GC-001-3BH : 52-pin plastic QFP (14 × 14 mm)

μPD17P204GC-002-3BH : 52-pin plastic QFP (14 × 14 mm)

μPD17P204GC-003-3BH : 52-pin plastic QFP (14 × 14 mm)

Soldering Method	Soldering Conditions	Symbol
Infrared reflow	Package peak temperature: 235°C, Time: 30 seconds max. (210°C min), Number of times: 2 max., Days: 7 days ^{Note} (after that, prebaking is necessary for 20 hours at 125°C) <Caution> (1) Start second reflow after device temperature (which has risen because of first reflow) has returned to room temperature. (2) Do not clean flux with water after first reflow.	IR35-207-2
VPS	Package peak temperature: 215°C, Time: 40 seconds max. (200°C min), Number of times: 2 max., Days: 7 days ^{Note} (after that, prebaking is necessary for 20 hours at 125°C) <Caution> (1) Start second reflow after device temperature (which has risen because of first reflow) has returned to room temperature. (2) Do not clean flux with water after first reflow.	VP15-207-2
Pin part heating	Pin temperature: 300°C max., Time: 3 seconds max. (per side of device)	—

Note The number of days the device can be stored after the dry pack was opened, under storage conditions of 25°C and 65% RH max.

Caution Do not use two or more soldering methods in combination (except the pin partial heating method).

APPENDIX A. MICROCONTROLLERS FOR LEARNING REMOTE CONTROLLER

Item		Product			
		μPD17203A	μPD17P203A	μPD17204	μPD17P204

RAM Capacity		336 x 4 bits			
Static RAM Capacity		4096 x 4 bits		2048 x 4 bits	
Carrier Generator for Infrared Remote Controller		Provided			
Receiver Pre-amplifier for Infrared Remote Controller		Provided			
I/O Ports		28			
External Interrupt (INT)		1			
Timer		4 channels { 8-bit timer: 3 channels Watch timer: 1 channel			
Watchdog Timer		Provided (WDO \overline{UT} output)			
Serial Interface		1 channel			
Stack		5 levels (interrupt nesting: 3 levels)		7 levels (interrupt nesting: 3 levels)	
Standby Function		STOP and HALT modes			
Instruction Execution Time (supply voltage) T _A = -20 to +75°C		4 μs at 4 MHz			
		(V _{DD} = 2.2 to 5.5V)	(V _{DD} = 2.9 to 5.5V ^{Note})	(V _{DD} = 2.2 to 5.5V)	(V _{DD} = 2.9 to 5.5V ^{Note})
Sub-System Clock		488 μs at 32.768 kHz (V _{DD} = 2.0 to 5.5 V)			
Package		52-pin plastic QFP			

Note The supply voltage varies depending on the operating ambient temperature. For details, refer to **4. ELECTRICAL SPECIFICATIONS.**

★ **APPENDIX B. DEVELOPMENT TOOLS**

The following tools are readily available for μPD17P203A and μPD17P204 program development.

Hardware

Name	Outline
In-circuit emulators { IE-17K IE-17K-ET ^{Note 1} EMU-17K ^{Note 2} }	The IE-17K, IE-17K-ET, and EMU-17 are in-circuit emulators that can be commonly used with the 17K series products. The IE-17K and IE-17K-ET are connected to the host machine, which is a PC-9800 series product or IBM PC/AT™, via RS-232-C. The EMU-17K is inserted into an expansion slot of a PC-9800 series product. When these in-circuit emulators are used in combination with a system evaluation board (SE board) dedicated to each model of the device, they operate as the emulator dedicated to that model. A more sophisticated debugging environment can be created by using the man-machine interface software, SIMPLEHOST™. The EMU-17K has a function that allows you to check the contents of the data memory real-time.
SE board (SE-17204)	The SE-17204 is an SE board for the μPD17203A, 17P203A, 17204 and 17P204. It may be used alone to evaluate a system, or in combination with an in-circuit emulator for debugging.
Emulation Probe (EP-17203GC)	The EP-17203GC is an emulation probe for the μPD17203A, 17P203A, 17204 and 17P204. It connects an SE board and the user system. When used with the EV-9200G-52 this probe connects the SE board and the target system.
Conversion socket (EV-9200G-52 ^{Note 3})	The EV-9200G-52 connects the EP-17203GC and the target system.
PROM programmer (AF-9703 ^{Note 4} , AF-9704 ^{Note 4} , AF-9705 ^{Note 4} , AF9706 ^{Note 4})	The AF9703, AF9704, AF9705, and AF9706 are PROM programmers that can program the μPD17P203A and 17P204. When connected with programmer adapter AF-9808A, this PROM programmer can program the μPD17P203A and 17P204.
Program adapter (AF-9808B ^{Note 4})	The AF-9808A is an adapter for programming the μPD17P203AGC and 17P204GC and is used in combination with the AF-9703, AF-9704, AF-9705, and AF-9706.

- Notes**
1. Low-cost model: external power supply type
 2. This is a product from I.C., Corp. For details, consult I.C.
 3. One EV-9200G-52 is supplied with the EP-17203GC. Five EV-9200G-52s are optionally available as a set.
 4. These are products from Ando Electric. For details, consult Ando Electric.

Software

Name	Outline Machine	Host	OS Media	Supply	Order Code	
17K series assembler (AS17K)	AS17K is an assembler that can be used in common with the 17K series products. When developing the program of the μPD17P203A and 17P204, AS17K is used in combination with a device file (AS17203, AS17204).	PC-9800 series	MS-DOS™	5" 2DH	μS5A10AS17K	
				3.5" 2HD	μS5A13AS17K	
		IBM PC/AT	PC DOS™	5" 2HC	μS7B10AS17K	
				3.5" 2HC	μS7B13AS17K	
Device file (AS17203)	AS17203 is a device file for μPD17203A, and 17P203A, and it is used in combination with an assembler commonly used for the 17K series (AS17K).	PC-9800 series	MS-DOS	5" 2HD	μS5A10AS17203	
				3.5" 2HD	μS5A13AS17203

					3.5" 2HC	μS7B13IE17K

Remark The corresponding OS versions are as follows:

OS	Version
MS-DOS	Ver. 3.30 to Ver. 5.00A ^{Note}
PC DOS	Ver. 3.1 to Ver. 5.0 ^{Note}
Windows	Ver. 3.0 to Ver. 3.1

Note Ver. 5.00/5.00A of MS-DOS and Ver. 5.0 of PC DOS have a task swap function, but this function cannot be used with this software.

[MEMO]

NOTES FOR CMOS DEVICES

① PRECAUTION AGAINST ESD FOR SEMICONDUCTORS

Note: Strong electric field, when exposed to a MOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop generation of static electricity as much as possible, and quickly dissipate it once, when it has occurred. Environmental control must be adequate. When it is dry, humidifier should be used. It is recommended to avoid using insulators that easily build static electricity. Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work bench and floor should be grounded. The operator should be grounded using wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions need to be taken for PW boards with semiconductor devices on it.

② HANDLING OF UNUSED INPUT PINS FOR CMOS

Note: No connection for CMOS device inputs can be cause of malfunction. If no connection is provided to the input pins, it is possible that an internal input level may be generated due to noise, etc., hence causing malfunction. CMOS devices behave differently than Bipolar or NMOS devices. Input levels of CMOS devices must be fixed high or low by using a pull-up or pull-down circuitry. Each unused pin should be connected to V_{DD} or GND with a resistor, if it is considered to have a possibility of being an output pin. All handling related to the unused pins must be judged device by device and related specifications governing the devices.

③ STATUS BEFORE INITIALIZATION OF MOS DEVICES

Note: Power-on does not necessarily define initial status of MOS device. Production process of MOS does not define the initial operation status of the device. Immediately after the power source is turned ON, the devices with reset function have not yet been initialized. Hence, power-on does not guarantee out-pin levels, I/O settings or contents of registers. Device is not initialized until the reset signal is received. Reset operation must be executed immediately after power-on for devices having reset function.

PC/AT and PC DOS are trademarks of IBM Corporation.

The export of this product from Japan is regulated by the Japanese government. To export this product may be prohibited without governmental license, the need for which must be judged by the customer. The export or re-export of this product from a country other than Japan may also be prohibited without a license from that country. Please call an NEC sales representative.

No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Corporation. NEC Corporation assumes no responsibility for any errors which may appear in this document.

NEC Corporation does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from use of a device described herein or any other liability arising from use of such device. No license, either express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Corporation or others.

While NEC Corporation has been making continuous effort to enhance the reliability of its semiconductor devices, the possibility of defects cannot be eliminated entirely. To minimize risks of damage or injury to persons or property arising from a defect in an NEC semiconductor device, customer must incorporate sufficient safety measures in its design, such as redundancy, fire-containment, and anti-failure features.

NEC devices are classified into the following three quality grades:

“Standard”, “Special”, and “Specific”. The Specific quality grade applies only to devices developed based on a customer designated “quality assurance program” for a specific application. The recommended applications of a device depend on its quality grade, as indicated below. Customers must check the quality grade of each device before using it in a particular application.

Standard: Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots

Special: Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support)

Specific: Aircrafts, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems or medical equipment for life support, etc.

The quality grade of NEC devices in “Standard” unless otherwise specified in NEC's Data Sheets or Data Books. If customers intend to use NEC devices for applications other than those specified for Standard quality grade, they should contact NEC Sales Representative in advance.

Anti-radioactive design is not implemented in this product.
