

The ITS18F03 is a robust n-channel, enhancement mode insulated gate bipolar transistor (IGBT) designed for low power dissipation in a wide range of low to medium voltage applications such as power supplies, lighting ballasts and motor drives. The high impedance gate simplifies gate drive considerations, allowing operation directly from low power control circuitry.

Fast rise and fall times allow high frequency operation making the device suitable for the latest systems employing high frequency switching.

Low saturation voltages minimise power dissipation, thereby reducing the running cost of the overall system in which they are used.

The ITS is fully short circuit rated making it especially suited for motor control and other arduous applications.

Typical applications include high frequency inverters for motor control, automotive, welding and heating apparatus. The Powerline range of IGBTs is also applicable to switched mode and uninterruptible power supplies.

Features

- Enhancement Mode n-Channel Device
- High Switching Speed
- Low On-state Saturation Voltage
- High Input Impedance Simplifies Gate Drive
- Latch-Free Operation
- Short Circuit Rated
- Pspice Model Data Provided

Applications

- High Frequency Inverters
- Motor Control
- Switched Mode Power Supplies
- High Frequency Welding
- Battery Truck Drives
- Automotive

Key Parameters

V_{CES}	(max)	300V
$V_{CE(sat)}$	(typ)	1.9V
I_{C25}	(max)	27A
I_{C85}	(max)	18A
I_{CM}	(max)	36A
t_{sc}	(max)	10 μ s

Note: When ordering use complete part number.

Caution: These devices are sensitive to electrostatic discharge. Users should observe proper ESD handling precautions.

Absolute Maximum Ratings

Stresses above those listed under 'Absolute Maximum Ratings' may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to Absolute Maximum Ratings for extended periods may affect device reliability.

$T_{case} = 25^{\circ}\text{C}$ unless stated otherwise.

Symbol	Parameter	Test Conditions	Max.	Units
V_{CES}	Collector-emitter voltage	$V_{GE} = 0\text{V}$	300	V
