

54F/74F2640 • 54F/74F2643 • 54F/74F2645 Octal Bus Transceiver with 25Ω Series Resistors in the Outputs

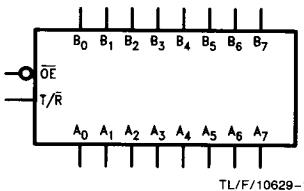

General Description

These devices are octal bus transceivers designed for asynchronous two-way data flow between the A and B busses. These devices are functionally equivalent to the 'F640, 'F643, and 'F645. The 25Ω series resistors in the outputs reduce ringing and eliminate the need for external resistors. Both busses are capable of sinking 12 mA, sourcing 15 mA, have TRI-STATE outputs, and a common output enable pin. The direction of data flow is determined by the transmit/receive (T/\bar{R}) input. The 'F2640 is an inverting version of the 'F2645. The 'F2643 has a noninverting A bus and an inverting B bus. The 'F2645 is a low power version of the 'F245 with 25Ω series resistors in the outputs.

Features

- 25Ω series resistors in the outputs eliminates the need for external resistors
- Designed for asynchronous two-way data flow between busses
- Outputs sink 12 mA and source 15 mA
- Transmit/receive (T/\bar{R}) input controls the direction of data flow
- Guaranteed 4000V minimum ESD protection
- 'F2645 is a low power version of the 'F245 with 25Ω series resistors in the outputs
- 'F2640 is an inverting option of the 'F2645
- 'F2643 has noninverting A bus and inverting B bus

Octal Bus Transceiver with 25Ω Series Resistors in the Outputs

Functional Description

The output enable (\bar{OE}) is active LOW. If the device is disabled (\bar{OE} HIGH), the outputs are in the high impedance state. The transmit/receive input (T/R) controls whether data is transmitted from the A bus to the B bus or from the B bus to the A bus. When T/R is LOW, B data is sent to the A bus. If T/R is HIGH, A data is sent to the B bus.

Function Table

Inputs		Outputs		
\bar{OE}	T/R	'F2640	'F2643	'F2645
L	L	Bus \bar{B} data to Bus A	Bus B data to Bus A	Bus B data to Bus A
L	H	Bus \bar{A} data to Bus B	Bus \bar{A} data to Bus B	Bus A data to Bus B
H	X	Z	Z	Z

H = High voltage level

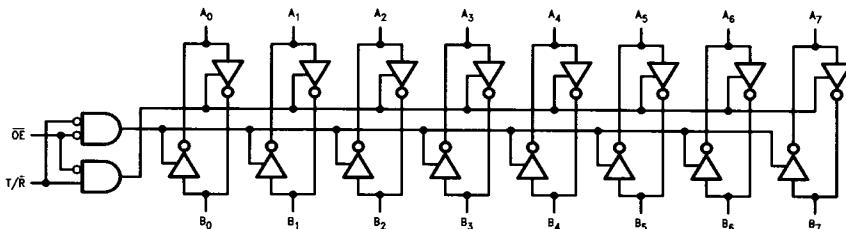

L = Low voltage level

X = Don't care

Z = High-impedance state

Absolute Maximum Ratings (Note 1)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Storage Temperature	–65°C to + 150°C
Ambient Temperature under Bias	–55°C to + 125°C
Junction Temperature under Bias	–55°C to + 175°C
V _{CC} Pin Potential to Ground Pin	–0.5V to + 7.0V
Input Voltage (Note 2)	–0.5V to + 7.0V
Input Current (Note 2)	–30 mA to + 5.0 mA
Voltage Applied to Output in HIGH State (with V _{CC} = 0V)	–0.5V to V _{CC}
Standard Output	–0.5V to + 5.5V
TRI-STATE Output	–0.5V to + 5.5V

Current Applied to Output in LOW State (Max)

twice the rated I_{OL} (mA)

4000V

ESD Last Passing Voltage (Min)

Note 1: Absolute maximum ratings are values beyond which the device may be damaged or have its useful life impaired. Functional operation under these conditions is not implied.

Note 2: Either voltage limit or current limit is sufficient to protect inputs.

Recommended Operating Conditions

Free Air Ambient Temperature

Military	– 55°C to + 125°C
Commercial	0°C to + 70°C

Supply Voltage

Military	+ 4.5V to + 5.5V
Commercial	+ 4.5V to + 5.5V

Ordering Information

The device number is used to form part of a simplified purchasing code where a package type and temperature range are defined as follows:

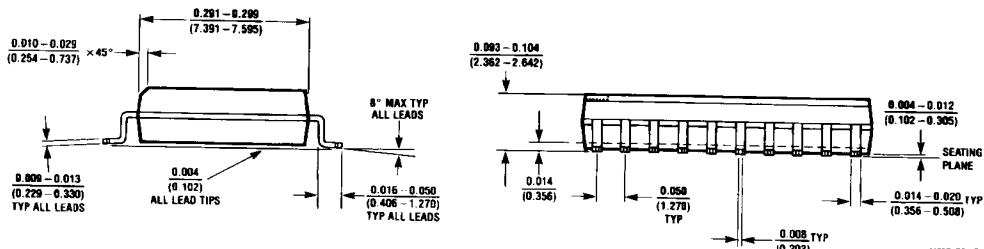

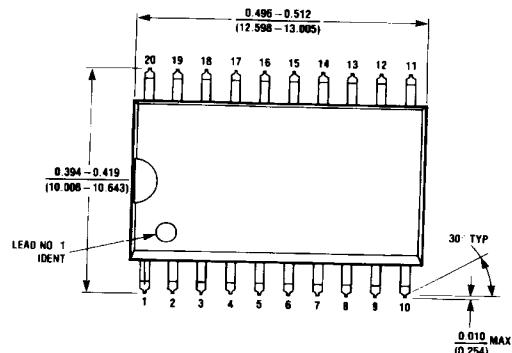

Physical Dimensions inches (millimeters)

J20A (REV M)

**20-Lead Ceramic Dual-In-Line Package (D)
NS Package Number J20A**

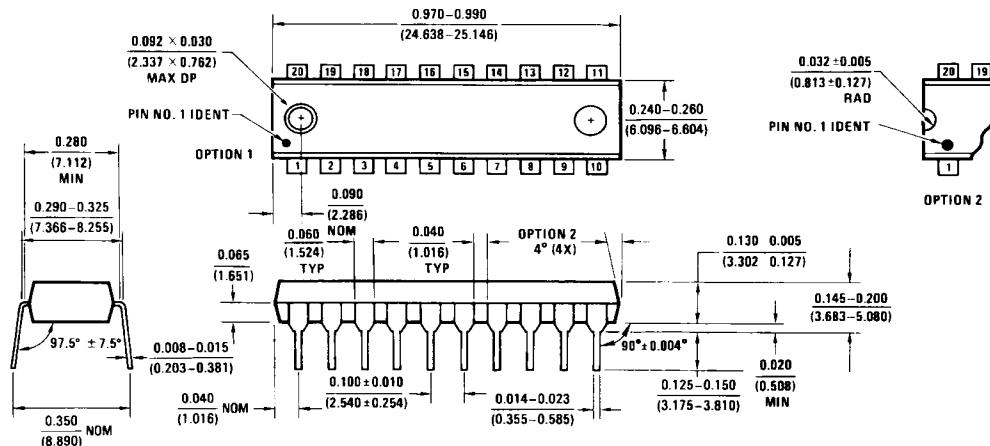

**20-Lead Small Outline Integrated Circuit (S)
NS Package Number M20B**

M20B (REV F)

Physical Dimensions inches (millimeters) (Continued)

Lit. # 114659

N20B (REV A)

**20-Lead Plastic Dual-In-Line Package (P)
NS Package Number N20B**

LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
