

3A LDO VOLTAGE REGULATOR

DESCRIPTION

The AMS1085 is a positive low voltage dropout regulator, voltage dropout is only 1.18V at 3A.

AMS1085 has two versions: the fixed version and the adjustable version. VOUT has a tolerance of less than 1% for fixed versions 1.5V, 1.8V, 2.5V, 3.3V, 5.0V and adjustable version.

The AMS1085 integrates overheating protection and current limit circuits. It is an suitable for all electronic products.

FEATURES

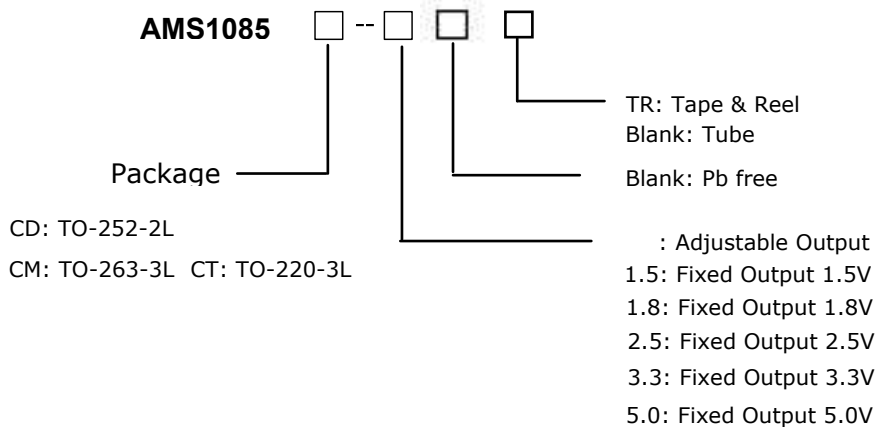

- * 1% accuracy for fixed output VOUT while the voltage is 1.5V, 1.8V, 2.5V, 3.3V, 5.0V and the adjustable output VOUT
- * Low Dropout Voltage: 1.18V at 3A output current
- * Current Limiting: 4.5A
- * Load regulation : 0.1% typical (adjustable version)
- * Line regulation : 0.015% typical (adjustable version)
- * Temperature Range: 0°C to 125°C

APPLICATIONS

- * High Efficiency Linear Regulators
- * SMPS Post-Regulator
- * Battery Charger
- * Microprocessor Supply
- * Desktop PCs, RISC and embedded processors'supply

BLOCK DIAGRAM

ABSOLUTE MAXIMUM

Characteristics	Symbol	Ratings	Unit
Input Supply Voltage	V _{IN}	20	V
Lead Temperature (Soldering,5 Seconds)	T _{LEAD}	260	°C
Operating Junction Temperature Range	T _J	150	°C
Storage Temperature	T _S	-65 ~ +150	V
Power Dissipation	PD	Internally Limited (Note1)	mW
ESD Tolerance (Minimum)	ESD	2000	V

Note1: The maximum allowable power dissipation is a function of maximum operating junction temperature T_J (max), the junction to ambient thermal resistance θ_{JA}, and the ambient temperature T_{amb}. The maximum allowable power dissipation at any ambient temperature is given: PD (max) = (T_J (max) - T_{amb})/θ_{JA}, exceeding the maximum allowable power limit will result in excessive die temperature; thus, the regulator will go into thermal shutdown. The junction to ambient thermal resistance θ_{JA} of different packages may be different, and the value of θ_{JA} depends on mounting technique.

RECOMMENDED OPERATING CONDITIONS

Characteristics	Symbol	Ratings	Unit
Input Supply Voltage	V _{IN}	12	V

Pin No.	Pin name	I/O	Functions
1	GND/ADJ	--/O	Ground/ADJ
2	VOUT	O	Output voltage
3	VIN	I	Input supply voltage

FUNCTION DESCRIPTION

The AMS1085 is a LDO regulator, its pass transistor is made up of a single NPN transistor being driven by a PNP. The dropout voltage is defined as: $V_{DROP} = V_{BE} + V_{SAT}$.

The AMS1085 has two versions: the fixed output version and the adjustable output version. Output voltages can be 1.5V, 1.8V, 2.5V, 3.3V, and 5.0V. On-chip thermal shut-down circuit provides protection against overload and overheating that would create excessive junction temperature.

The adjustable output version requires a 22 μ F or bigger tantalum capacitor at output for AMS1085 stability. The capacitor for fixed output version can be smaller and should be determined base on actual application. Generally, the stability of linear regulator stability decreases with output currents increase.
