

VFM STEP-UP DC/DC CONVERTER

NO.EA-045-0602

OUTLINE

The RN5RKxx1A/xx1B/xx2A Series are CMOS-based VFM (Chopper) Step-up DC/DC converter ICs with ultra low supply current and high output voltage accuracy.

Each of the RN5RKxx1A/xx1B consists of an oscillator, a VFM control circuit, a driver transistor to have low ON resistance (Lx switch), a reference voltage unit, a high speed comparator, resistors for voltage detection, an Lx switch protection circuit and an internal chip enable circuit. A low ripple, high efficiency step-up DC/DC converter can be composed of this RN5RKxx1A/xx1B with only three external components: an inductor, a diode and a capacitor.

The RN5RKxx2A uses the same chip as what is employed in the RN5RKxx1A/1B IC and has a drive pin (EXT) for an external transistor instead of an Lx pin. As it is possible to load a large output current with a power transistor which has a low saturation voltage, RN5RKxx2A IC is recommendable to users who need an output current as large as between several tens mA and several hundreds mA.

Using the chip enable function, it is possible to make the supply current on standby minimized.

Since the package for these ICs is SOT-23-5 (Mini-mold), high density mounting of the ICs on board is possible.

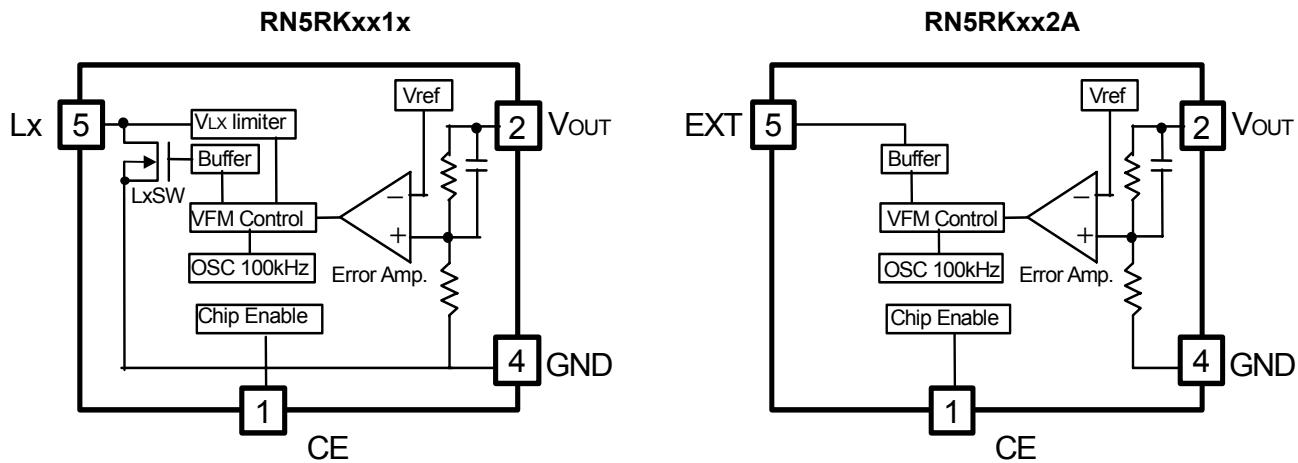

FEATURES

- Small Number of External Components Only an inductor, a diode and a capacitor (RN5RKxx1A/xx1B)
- Standby Current Typ. 0 μ A
- High Output Voltage Accuracy $\pm 2.5\%$
- Low Ripple and Low Noise
- Low Start-up Voltage Max. 0.9V
- High Efficiency Typ. 80%
- Including a Driver Transistor with Low ON Resistance Only RN5RKxx1A/xx1B
- Two Kinds of Duty Ratio 77% (xx1A, xx2A)/ 55% (xx1B)
- Output Voltage Range 2.0V to 5.5V
- Low Temperature-Drift Coefficient of Output Voltage Typ. $\pm 100\text{ppm}/^\circ\text{C}$
- Small Packages SOT-23-5 (Mini-Mold)

APPLICATIONS

- Power source for battery-powered equipment.
- Power source for cameras, camcorders, VCRs, and hand-held communication equipment.
- Power source for those appliances which require higher cell voltage than that of batteries.

SELECTION GUIDE

The output voltage, the driver type, the duty cycle and the taping type for the ICs can be selected at the user's request.

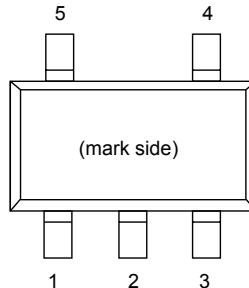

The selection can be made by designating the part number as shown below:

RN5RKXXXX-XX ←Part Number
↑↑↑↑
 a bc d

| Code | Contents |
|------|--|
| a | Setting Output Voltage (V _{OUT}) : Stepwise setting with a step of 0.1V in the range of 2.0V to 5.5V is possible. |
| b | Designation of Driver 1: Internal Lx Tr. Driver 2: External Tr. Driver |
| c | Designation of Duty Cycle A: 77% B: 55% |
| d | Designation of Taping type Ex. TR, TL (refer to Taping Specifications, TR type is prescribed as a standard.) |

| T _{stg} | Storage Temperature Range | -55 to +125 | °C |

*1)For Power Dissipation, please refer to PACKAGE INFORMATION to be described.

ABSOLUTE MAXIMUM RATINGS

Absolute Maximum ratings are threshold limit values that must not be exceeded even for an instant under any conditions. Moreover, such values for any two items must not be reached simultaneously. Operation above these absolute maximum ratings may cause degradation or permanent damage to the device. These are stress ratings only and do not necessarily imply functional operation below these limits.

*1)Condition: An Output load resistor R_L is connected between V_{OUT} and GND.

Note that the resistor R_L has a resistance which makes an output current 1mA after step-up operation.

*2)The Supply Current 1 (I_{DD1}) for IC itself is measured when the internal oscillator works continuously.

If the oscillator works intermittently, the supply current becomes smaller than the value which is written on the above table.

Measurement condition: V_{OUT}=V_{CE}=Setting Output Voltage×0.96
