## ■Typical Connection Diagram/Block Diagram

 $C_{IN}, C_B$ : Input and bias capacitors (Approx. 0.1 to 10μF)

Required when the input line contains inductance or when the wiring is long.

Co: Output capacitor (47μF or larger)

SI-3010LLSL is designed to use a low ESR capacitor (such as a ceramic capacitor) for the output capacitor. The recommended ESR value for an output capacitor is 500mΩ or less (at room temperature).

R1, R2: Output voltage setting resistors

The output voltage can be set by connecting R1 and R2 as shown at left.

The recommended value for R2 is 10kΩ.

$$R1 = (V_{OUT} - V_{ADJ}) / (V_{ADJ}/R2)$$

Css: Soft start capacitor

The rising time of the output voltage can be set by connecting Css between VOUT and ADJ.
